## **Regulations concerning PG Diploma Programme**

### **Faculty of Social Sciences, from 2021-2022**

#### **PG Diploma Programme in Gandhian Studies (PG Diploma in Gandhian Studies- CBCS)**

Regulations Governing the Post-Graduate Diploma Programme under Choice Based Credit System (KU-CBCS), framed under Section 44(1)(C) of K.S.U. Act, 2000.

#### **POST GRADUATE DIPLOMA IN GANDHIAN STUDIES CHOICE BASED CREDIT SYSTEM (CBCS)**

##### **Title:**

These Regulations shall be called “Karnatak University Regulations Governing Post-Graduate under the Choice Based Credit System” for Post Graduate Diploma programme.

##### **Commencement:**

These Regulations shall come into force from the academic year 2021-2022.

##### **Definitions:**

In these Regulations, unless otherwise mentioned:

- a) “University” means Karnatak University:
- b) “Post-Graduate Programmes” means PG Diploma Courses.
- c) “Compulsory Course” means a fundamental paper which a student admitted to a particular Post-Graduate programme should successfully complete to receive the Post-Graduate Degree in the concerned subject.
- d) “Specialization Paper” means an advanced paper due to departmental choice for students wanting to receive Degree in the specialization area:
- e) “Open elective” means a course offered by Department for students of other Departments in the same Faculty. Students have freedom to choose from a number of optional courses offered by other Department/s to add to their credits required for the completion of their respective programmes: however, if in a P.G.Centre there is only one Department for the time being, the students of that Department should study that open elective course.
- f) “Credit” means the unit by which the course work is measured. For this Regulation, one Credit means one hour of teaching work or two hours of practical work per week. Normally a Semester is of 16 weeks duration in any given academic year. As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits is equal to 50 marks, 3 credits is equal to 75 marks and 4 credits is equal to 100 marks as used in conventional system.
- g) “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each subject by the candidate after completing his/her Internal Assessment and Semester end Examinations. Each course carries a prescribed number of the marks of credits. These

grades are awarded for each subject after conversion of the marks and after completion of the examinations in each semester.

- h) “Grade Point Average” of GPA refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of courses student takes and the grades awarded to him/her for each of the subjects so chosen.
- i) “Cumulative Grade Point Average” or CGPA refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown at the end of this regulation.

### **Minimum Eligibility for Admission:**

The students who have successfully completed the three year/four-year Degree course or any other Degree course of this University or of any other University recognized as equivalent there to by this University shall be eligible for admission to the Post Graduate Programmes under the KU-CBCS Programme provided they also satisfy the eligibility conditions like percentage of marks etc., as may be prescribed by the University and as per Ordinance of the course.

### **Entrance Test**

Not Applicable

### **Selection for Admission**

The selection of students shall be made on merit in each category of reservations as per the University rules for One Year (Non-semester).

### **Intake**

The total number of candidates to be admitted to the course would be 50 only for the One Year (Non-semester). Ten seats are allocated to other University/Enhanced Fees candidates. Total Seats is 40.

### **Course of Study:**

The courses of study for PG Diploma in Gandhian Studies course shall comprise of Theory, Social Service & Field Work as noted in the syllabus.

### **Duration of the Programme:**

The programme of study for the Post-Graduate Diploma shall normally extend over a period of one academic years, academic year comprising of non-semester/, and each semester comprising of sixteen weeks of class work.

### **Medium of Instruction**

The medium of instruction and examination is English and Kannada.

### **Minimum Credits and Maximum Credits:**

- a) There shall be three categories of courses viz., Compulsory course, Open Elective Course. Compulsory Course should be from the concerned department only. The Open Elective are the courses offered by other Departments in the same Faculty.
- b) Each course shall have a definite course objective, Eligibility criterion for taking the course, scheme of Evaluation including the components of Internal Assessment (IA) marks, Projects (if any), the number of contact hours, type of practical and the prescribed credits.
- c) The credits for each of compulsory course may vary from 3 to 4 credits; for specialization course it may vary from 1 to 4. In case of Open Elective Course, it shall be 1 to 3 credits for each paper.
- d) A student shall register for minimum of 18 credits and a maximum of 30 credits per semester. However, to qualify for the degree in any Department under any school and faculty, he/she should have registered and cleared a minimum number of credits, which vary from course to course.

### **Course Structure:**

- a) The students of Post-Graduate Programme shall study the courses as may be approved and prescribed by the Academic Council of the University from time to time.
- b) A typical Master Degree program consists of a number of courses. This number varies from discipline to discipline. The term course is used to indicate a logical part of a subject matter of the programme (also referred to as paper). In essence the courses are of three types:
  - i. Compulsory Course
  - ii. Open Elective Course.
- c) Each programme shall have a set of compulsory course that a student must complete to get the degree in the concerned Department. These are distributed in each semester. There could be a minimum of such papers for each semester depending on the department.
- d) The students shall also choose a minimum number of specializations Course offered within the department. Each department will offer at least one specialization paper in the third and fourth semester. The Department, BOS and the Faculty may also have spell out the number of such specialization courses a student will have to take for the specialization. The Department offering of specialization course shall provide the flexibility in the system so that the student can opt for a variety of programmes depending upon their interest.
- e) Each department shall offer at least two Open Elective courses for the II and III Semester for students from other department. Student from the same department are generally not allowed to opt the courses offered as Open Elective course in the same department.
- f) Each course (paper) in this system is designed carefully to include lectures / tutorial/ Laboratory work/ seminars/ Project work/ practical training/ report writing/ Viva-voce etc., to meet effective teaching and learning needs and the credits are assigned suitably.
- g) Master Degree Programmes are essentially semester system Programmes. There shall be 4 semesters in each Programme. There shall be two semesters for each year of the Programme. Each of the Semester will be of 16 weeks duration including evaluation and grade finalization period. The academic session in each semester will provide 90 teaching days with 48 hrs of teaching / learning periods in six days session per week.
- h) The normal calendar for the semester would be as follows:
  - i. I Year Non-semester and OEC III semester - August to November

ii. OEC IInd Semester - January to April

**Attendance**

- Each paper shall be taken as a unit for the purpose of calculating the attendance.
- Each student will have to sign and mark his attendance for every hour of teaching of each paper. At the end of every month all teachers shall notify the attendance of every student on the Notice Board of the department during 2<sup>nd</sup> week of every month. Chairman shall certify the fulfilment of required attendance of every candidate in the Examination form.

Regulations concerning Master Degree Programme

**Faculty of Science and Technology, from 2016-17**

**Master Degree Programme in Geography (M. Sc.-CBCS)**

Regulations Governing the Post-Graduate Master Degree Programmes under Choice Based Credit System (KU-CBCS), framed under Section 44(1)(C) of K.S.U. Act, 2000.

## **MASTER OF SCIENCE IN GEOGRAPHY CHOICE BASED CREDIT SYSTEM (CBCS)**

### **Title:**

These Regulations shall be called “Karnatak University Regulations Governing Post-Graduate under the Choice Based Credit System” for Master Degree Programmes.

### **Commencement:**

These Regulations shall come into force from the academic year 2016-17

### **Definitions:**

In these Regulations, unless otherwise mentioned:

- a) “University” means Karnatak University:
- b) “Post-Graduate Programmes” means Master’s Degree Courses.
- c) “Compulsory Course” means a fundamental paper which a student admitted to a particular Post-Graduate programme should successfully complete to receive the Post-Graduate Degree in the concerned subject.
- d) “Specialization Paper” means an advanced paper due to departmental choice for students wanting to receive Degree in the specialization area:
- e) “Open elective” means a course offered by Department for students of other Departments in the same Faculty. Students have freedom to choose from a number of optional courses offered by other Department/s to add to their credits required for the completion of their respective programmes: however, if in a P. G. Centre there is only one Department for the time being, the students of that Department should study that open elective course.
- f) “Credit” means the unit by which the course work is measured. For this Regulation, one Credit means one hour of teaching work or two hours of practical work per week.

Normally a Semester is of 16 weeks duration in any given academic year. As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits is equal to 50 marks, 3 credits is equal to 75 marks and 4 credits is equal to 100 marks as used in conventional system.

- g) “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each subject by the candidate after completing his/her Internal Assessment and Semester end Examinations. Each course carries a prescribed number of the marks of credits. These grades are awarded for each subject after conversion of the marks and after completion of the examinations in each semester.
- h) “Grade Point Average” of GPA refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of courses student takes and the grades awarded to him/her for each of the subjects so chosen.
- i) “Cumulative Grade Point Average” or CGPA refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown at the end of this regulation.

#### **Minimum Eligibility for Admission:**

The students who have successfully completed the three year/four-year Degree course or any other Degree course of this University or of any other University recognized as equivalent there to by this University shall be eligible for admission to the Post Graduate Programmes under the KU-CBCS Programme provided they also satisfy the eligibility conditions like percentage of marks etc., as may be prescribed by the University and as per Ordinance of the course.

#### **Entrance Test:**

Candidate seeking admission to the course shall be required to appear for entrance test conducted by the University as per the scheduled.

#### **Selection for Admission:**

The selection of students shall be made on merit in each category of reservations as per the University rules.

**Intake:**

The total number of candidates to be admitted to the course would be **35** only for the 1<sup>st</sup> semester. Two seats are allocated to other University candidates of which one for other University within the state and one for Outside state. Ten seats are under enhanced fee. Total Seats is **35**.

**Course of Study:**

The courses of study for M. Sc Degree shall comprise of Theory and Practicals as prescribed in the syllabus.

**Note: Specification of Degrees as per UGC notification dated March 2014 published in the Gazette of India, 5<sup>th</sup> July 2014 (Part III Section 4).**

**Duration of the Programme:**

The programme of study for the Post-Graduate Master Degree shall normally extend over a period of two academic years, each academic year comprising of two semesters, and each semester comprising of sixteen weeks of class work.

**Medium of Instruction:**

The medium of instruction and examination is English.

**Minimum Credits and Maximum Credits:**

- a) There shall be three categories of courses viz., Compulsory course, Specialization Course and Open Elective Course. Compulsory and Specialization Course should be from the concerned Department only. The Open Elective is the courses offered by other Departments in the same Faculty.
- b) Each course shall have a definite course objective, Eligibility criterion for taking the course, scheme of Evaluation including the components of Internal Assessment (IA) marks, Projects (if any), the number of contact hours, type of practical and the prescribed credits.
- c) The credits for each of compulsory course may vary from 3 to 4 credits; for specialization course it may vary from 1 to 4. In case of Open Elective Course, it shall be 1 to 3 credits for each paper.
- d) A student shall register for minimum of 18 credits and a maximum of 30 credits per semester. However, to qualify for the Degree in any Department under any school and

faculty, he/she should have registered and cleared a minimum number of credits, which vary from course to course.

**Course Structure:**

- a) The students of Post-Graduate Programme shall study the courses as may be approved and prescribed by the Academic Council of the University from time to time.
- b) A typical Master Degree program consists of a number of courses. This number varies from discipline to discipline. The term course is used to indicate a logical part of a subject matter of the programme (also referred to as paper). In essence the courses are of three types:
  - i. Compulsory Course
  - ii. Specialization Course or Optional Course and
  - iii. Open Elective Course.
- c) Each programme shall have a set of compulsory course that a student must complete to get the degree in the concerned Department. These are distributed in each semester. There could be a minimum of such papers for each semester depending on the department.
- d) The students shall also choose a minimum number of specializations Course offered within the department. Each department will offer at least one specialization paper in the third and fourth semester. The Department, BOS and the Faculty may also have spell out the number of such specialization courses a student will have to take for the specialization. The Department offering of specialization course shall provide the flexibility in the system so that the student can opt for a variety of programmes depending upon their interest.
- e) Each department shall offer at least two Open Elective courses for the II and III Semester for students from other Department. Student from the same Department are generally not allowed to opt the courses offered as Open Elective course in the same Department.
- f) Each course (paper) in this system is designed carefully to include lectures / tutorial/ Laboratory work/ seminars/ Project work/ practical training/ report writing/ Viva-voce etc., to meet effective teaching and learning needs and the credits are assigned suitably.

- g) Master Degree Programmes are essentially semester system Programmes. There shall be Four Semesters in each Programme. There shall be Two Semesters for each year of the Programme. Each of the Semester will be of 16 weeks duration including evaluation and grade finalization period. The academic session in each semester will provide 90 teaching days with 48 hrs of teaching / learning periods in six days session per week.
- h) The normal calendar for the semester would be as follows:
  - i. I and III semester - August to November
  - ii. II and IV Semester - January to April

### **Attendance**

- a. Each paper shall be taken as a unit for the purpose of calculating the attendance.
- b. Each student will have to sign and mark his attendance for every hour of teaching of each paper. At the end of every month all teachers shall notify the attendance of every student on the Notice Board of the Department during 2<sup>nd</sup> week of every month. Chairman shall certify the fulfilment of required attendance of every candidate in the Examination form.
- c. Certain proportion of the marks in Internal Assessment shall be awarded based on attendance as an incentive to the student for regularity in attendance.
- d. A student shall be considered to have satisfied the requirement of attendance for each paper, if he/she has to attend not less-than 75% of the number of classes held up to the end of the semester including tests, seminars, group discussions, practical, tutorials, etc.
- e. However, if a student represents his/her institution, University, State or Nation in sports, NCC, NSS of Cultural of any other officially sponsored activities, he/she shall be eligible to claim the attendance for the actual number of days participated subject to a maximum of 20 days in a semester based on the specific recommendation of the head of the Department.

## Course Outline for the M. Sc. Geography:

### SEMESTER – I

Paper Code	Title of the Paper	Max. Marks	Internal Assessment	Total Marks	Credits	Teaching Hrs.
	<b>Compulsory Papers</b>					
Geog-TP1.1	Geomorphology	75	25	100	4	4 Hrs / week
Geog -TP1.2	Climatology	75	25	100	4	4 Hrs / week
Geog -TP1.3	Oceanography	75	25	100	4	8 Hrs / week
Geog -TP1.4	Development of Geographical Thought	75	25	100	4	4 Hrs / week
Geog-Prc1.5	Interpretation of Toposheets	75	25	100	4	4 Hrs / week
Geog - Prc1.6	Interpretation of Weather Maps	75	25	100	4	8 Hrs / week

### SEMESTER – II

Paper Code	Title of the Paper	Max. Marks	Internal Assessment	Total Marks	Credits	Teaching Hrs.
	<b>Compulsory Papers</b>					
Geog -TP2.1	Geography of Agriculture	75	25	100	4	4 Hrs / week
Geog -TP2.2	Geography of Marketing	75	25	100	4	4 Hrs / week
Geog -TP2.3	Geography of Transport	75	25	100	4	8 Hrs / week
Geog -TP2.4	Regional Geography of India	75	25	100	4	4 Hrs / week
Geog -Prc2.5	Cartographic Methods	75	25	100	4	4 Hrs / week
Geog - Prc2.6	Basic Statistics.	75	25	100	4	8 Hrs / week

### SEMESTER - III

Paper Code	Title of the Paper	Max. Marks	Internal Assessment	Total Marks	Credits	Teaching Hrs.
	<b>Compulsory Papers</b>					
Geog-TP3.1	Theoretical and Quantitative Geography	75	25	100	4	4 Hrs / week
Geog-TP3.2	Geography of Settlements	75	25	100	4	4 Hrs /

						week
Geog -TP3.3	Population Geography	75	25	100	4	8 Hrs / week
Geog -TP3.4	Environmental Geography	75	25	100	4	4 Hrs / week
Geog -Prct3.5	Quantitative Methods	75	25	100	4	4 Hrs / week
Geog - Prct3.6	Aerial Photo Interpretation	75	25	100	4	8 Hrs / week

#### SEMESTER - IV

Paper Code	Title of the Paper	Max. Marks	Internal Assessment	Total Marks	Credits	Teaching Hrs.
	<b>Compulsory Papers</b>					
Geog-TP4.1	Natural Hazards and Management	75	25	100	4	4 Hrs / week
Geog -TP4.2	Geography of Tourism	75	25	100	4	4 Hrs / week
Geog -TP4.3	Principles of Remote Sensing	75	25	100	4	8 Hrs / week
Geog -TP4.4	Regional Planning.	75	25	100	4	4 Hrs / week
Geog -Prct4.5	Computer Applications and GIS	75	25	100	4	4 Hrs / week
Geog -Prct4.6	Project Work.	75	25	100	4	8 Hrs / week

#### **Project Report / Study Tour:**

There shall be a project report / study tour, which is compulsory as per the curricula and a student, has to submit a project report. The project report will be conducted at the beginning of the fourth semester.

#### **Submission of Journal:**

- a) The students shall have to submit the journal to the Chairman duly signed by the course teacher for their allotted practical papers of each semester before the commencement of the theory examination of each semester.

- b) Candidates keeping terms but not appearing for the theory and practical papers and not submitted the journal within the prescribed time may appear for respective examination and submit the journal within the prescribed time.
- c) Candidates appearing for the examination under the provision of (c) will be not eligible for the award of any rank, prize, medal etc.

**Evaluation:**

- a. Each Course has two components, the first being Internal Assessment Marks and the second being the Semester End Exams. The Internal Assessment (IA) marks are based on continuous Internal Assessment. The total marks for the Internal Assessment would be based on the total credit awarded to the Course. For instance, if a Compulsory Course has a Credit award of 4, then the total max marks would be 100 for the subject.
- b. The marks shall be displayed on the Notice Board of the Department also. The tests shall be written in a separately designated book and after evaluation; the same should be shown to students.
- c. In case of candidates who wish to appear in improvement examinations, if any, the marks obtained in the Internal Assessment shall not be revised. There is no improvement for internal assessment.
- d. To encourage the students for the regular participation in academic curricula following break-up for attendance has been recommended.

Attendance	Marks Allotted
91 to 100%	3
81 to 90%	2
75 to 80%	1

- e. Students seeking the condoning of attendance after representing the University have to produce attendance certificates from the concerned authority and that attendance period to condone of shall be considered for the allotment of marks as under.
- f. There shall be one end semester examination of three duration (for 75 marks/ paper). Each answer scripts of the semester end examination (theory and project report) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be the average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks such a script shall be assessed by third external examiner. The marks allotted by the third examiner shall be average with nearer mark of the two evaluations.

**Completion of Course:**

- a. A candidate is expected to successfully complete P.G. Master Degree course in two years from the date of admission.
- b. Whenever the syllabus is revised, the candidate reappearing shall be allowed for PG Degree examinations only according to the new syllabus.
- c. The CBCS scheme is fully carry-over system. However, the four –semester two years course should be completed by a student within double duration of the normal course period (i.e. 4 years). For these periods, candidate may be permitted to take examination in cross-semester (even semester examination in even and odd semester examination in odd semester examination) after paying the examination fee of Rs. 1,000/- per paper.

**Declaration of Results:**

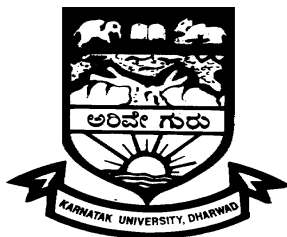

- a. Minimum for a pass in each paper shall be 40% of the total 100 marks including both the IA and the semester end examinations. However, candidate should obtain at least 40% of the marks in the Semester End Examination. There is no minimum in the IA marks. However, after adding the IA and the semester end examination, the candidates should score a minimum of 40 % of the maximum marks for the subject.
- b. The candidates, seeking improvement of their results shall submit a representation along with a permissible fee to the Registrar (Evaluation) and surrender the degree certificate/ provisional pass certificate /original marks card of that semester within 15 days of announcement of result.

**Marks and Grading:**

The grading of successful candidate at the examination shall be as follows:

Percentage	GPA/CGPA	Letter	Class
75.00 to 100.00 %	7.50 to 10.00	A	First Class with Distinction
60.00 to 74.90%	6.00 to 7.49	B	First Class
50.00 to 59.94%	5.00 to 5.99	C	Second Class
40.00 to 49.94%	4.00 to 4.99	D	Pass
Less than 40.00%	Less than 4.00	F	Fail

CHOICE BASED CREDIT SYSTEM (M. Sc - CBCS)**

**From**

**2016-17 & Onwards**

## **PROGRAMME SPECIFIC OUTCOMES (PSOS)**

- PO 1** Enrich the knowledge of understanding the relevant concepts and principles of geography and its evolutionary process in the historical past.
- PO 2** Enhanced the capabilities to understand the concepts and principles of geomorphology, climatology and oceanography in Physical Geography.
- PO 3** Enhanced the capability to explain the relevant theories and models in both Physical and human geography for geographical analysis.
- PO 4** Know the complex and interactive nature of physical and human environments and changing Process.
- PO 5** Understand Conceptual clarity about the human actions on nature, relationship between the man and environment and important issues related to human induced hazards and natural hazards.
- PO 6** Enhanced the existing knowledge with regards to the concepts related to settlements and population and spatial distribution, trends, pattern and spatio-temporal variations on any geographical space in the world.
- PO 7** Enrich the knowledge in the principles of spatial movements, interactions, arrangements, behavior and perception in past changing aspects in marketing, transportation and tourism activities on geographical environment.
- PO 8** Demonstrate the skill of analysis of geographical information, evidences and cause and effects and process of changes of physical and cultural aspects with socio-economic aspects.
- PO 9** Develop the consciousness of relevance of geography to understand and solving the contemporary environmental issues with rural, urban and regional development.
- PO 10** Enhance the knowledge and the skills in Map Making procedures and Principles of Cartography and exposé in the technology for handling the spatial and non-spatial data and to integrate in Geographical Environment and Remote Sensing.

## SEMESTER I

### Title of the Course: Geog-TP1.1: GEOMORPHOLOGY

Credits: 04

Maximum Marks: 75 + 25 IA Marks.

Teaching Hours: 56

04 Hours per week.

**C: Course Outcomes: After the completion of this course, students will be able to:**

COS	Content
1.	To define the Geomorphology and to explain the fundamental concepts of it.
2.	To understand the geotectonic hypothesis put forth by different scholars about the plate tectonics.
3.	To explain the earth movements, geosynclines and forces of crustal instability.
4.	To understand the concept of gradation, mass movement and slope replacement model.
5.	To explain the geomorphic processes erosion and depositional landforms.

### D: Detail Curriculum:

Unit	Content
I	Nature and Scope of Geomorphology, Fundamental Concepts: Multicyclic and Polygenetic evolution of landscape. The interior of the earth, Seismological evidences. Geological time scale. Davis & Penck views of cycle of erosion.
II	Geotectonic Hypothesis: Isostasy, Wagner's Continental Drift Theory, Holme's Convectional Current Theory, Jolley's Thermal Cycle Theory, Plate Tectonics.
III	Earth Movements: Epeirogenic, Organic and Cymatogenic earth movements. Mountain Building – Geosynclines, Hinter land, Foreland and Median Mass. Forces of crustal instability.
IV	Exogenic Processes: Concept of gradation, Agradation and degradation, classification of weathering, mass movement. Slope evolution, down wearing, parallel retreat and slope replacement model.
V	Geomorphic processes: Cycle of Erosion, Fluvial, Glacial, Aeolian, Marine and Karst processes and resulting landforms, erosion and depositional landforms.

### E: Suggested Readings

01	Dayal, P.	A text book of Geomorphology Shukla book Depot, Patna, 1996.
02	Monkhouse, F.J	Principles of Physical Geography, Hodder and London, 1960.
03	Sparks, B.W	Geography Longmans, London, 1960.

07	Siddharth, K	The Earth's dynamic surface.
08	Ranganath	PrakritikaBhoogolaShastradaMoolatatwagalu(Kannada Version).

**Title of the Course:Geog -TP1.2: CLIMATOLOGY**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To define the Climatology, composition and structure of the atmosphere, insolation and heat balance.
2.	To understand the vertical and horizontal distribution of atmospheric pressure, Monsoons and it's mechanism.
3.	To explain the humidity and its types, hydrological cycle, types of clouds and rainfall.
4.	To understand the classification, air masses and fronts, cyclones and thunderstorms.
5.	To explain theclassification of climates with different scholars view point and globe climate changes.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Nature and scope of Climatology, composition and structure of the atmosphere. Insolation and heat balance. Vertical and Horizontal distribution of temperature.
<b>II</b>	Vertical and Horizontal distribution of atmospheric pressure, Isobaric maps, Pressure Zones and planetary winds. Mansoons: Mechanism and its distribution.
<b>III</b>	Humidity and its types, Hydrological Cycle, Process and forms of condensation. Types of Clouds, adiabatic cooling and precipitation, distribution and types of rainfall.
<b>IV</b>	Origin, Nature and source regions of air-masses, fronts Classification, air masses. Extra-Tropical and Tropical Cyclones. Thunder storms- their formation, types and distribution.
<b>V</b>	Climatic classification: Koeppen's and Thornthwaite's classification of climates: Global climatic changes: Human Impact on climate, ozone depletion, Heat Islands, Global Warming and its Consequences.

**E: Suggested Readings:**

01	Trewartha. G.T Horn	An Introduction to Climate.
02	Blair. T.A	Climatology.
03	Lal. D.S	Climatology.
04	Willin Donn	Meteorology.
05	Critch Field	Climatology.
06	Berry & Chorlay	Atmosphere weather and Climate.
07	Griffiths John .F	Applied Climatology.
08	Griffith Tailor	Introduction to Climatology.
09	Majid Hussain	Physical Geography.

**Title of the Course: Geog -TP1.3: OCEANOGRAPHY**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To define the oceanography and its concepts and bottom relief of oceans and their origin.
2.	To understand the Physical and Chemical Properties of Ocean water and Types of tides and theories.
3.	To understand the origin, causes and types of ocean currents and their effects, currents of Atlantic, Pacific and Indian Ocean.
4.	To discuss the ocean deposits, types and distribution of Coral Reefs and Theories of Origin of Coral Reefs.
5.	To explain ocean as a store house of mineral wealth, food resource and marine pollution.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	The permanency of Ocean Basins: Theories of Permanency, Bottom Relief of Oceans: Continental Shelf, Slope, Ocean Plains and Ocean Deep. Origin and their salient features, hypsographic curve, Indian Ocean, Atlantic Ocean and Pacific Ocean.
<b>II</b>	Origin and distribution of submarine canyons. Physical and Chemical Properties of Ocean water. Distribution of Temperature, Origin and distribution of Salinity, Dynamics of Ocean water. Waves, Tides, Types of tides, Theories of Tides, Progressive Theory, Stationary Wave Theory.
<b>III</b>	Ocean Currents: Origin, causes and types of Ocean currents and their effects, currents of Atlantic,

	Pacific and Indian Ocean.
<b>IV</b>	Ocean Deposits: Terrigenous and paleogenic deposits. The nature, types and distribution of Coral Reefs and Theories of Origin of Coral Reefs.
<b>V</b>	Ocean as a store house of mineral wealth, food resource and marine pollution.

**E: Suggested Readings:**

01	Sharma and Vatal	Oceanography for Geographers.
02	King C.A.M	Oceanography for Geographers.
03	Kuenen P.K	Marine Geology.
04	Sverdrup, Johnson & Fleming	The Ocean.
05	Lal. D.S	Oceanography.
06	Siddharth .K	Oceanography.

**Title of the Course: Geog -TP1.4: DEVELOPMENT OF GEOGRAPHICAL THOUGHT**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To discuss the contributions of the scholars during 18 <sup>th</sup> & 19 <sup>th</sup> centuries.
2.	To discuss the Development of Scientific Geography in 20 <sup>th</sup> Century, Quantitative Revolution and development of scientific method and theory building.
3.	To understand the Systems Analysis and Structure of Modern Geography.
4.	To discuss the dualism in geography and types of dualism.
5.	To discuss the themes in Geography in an effective manner.

**D: Detail Curriculum:**

Unit	Content
<b>I</b>	Development of Geography during 18 <sup>th</sup> century, Methodology, Motivation and Content. The contributions of J.R. Forster, Karl Ritter, Alexander Von Humboldt, Emmanuel Kant. The growth of Geographical Knowledge in the 19 <sup>th</sup> Centuries: Methodology, Motivation and content. Contributions of Ratzel, Peshel, Richthofen, Penk, Blach, Mackindar, W.M. Davis and Miss. Semple.
<b>II</b>	The Development of Scientific Geography in 20 <sup>th</sup> Century: Quantitative Revolution development of scientific method and theory building, locational patterns and regional analysis, Contributions of Taylor, Christaller, Hartshorne and Peter Haggett.
<b>III</b>	Systems Analysis and Structure of Modern Geography: System theory, Positivism, Pragmatism, Functionalism, Idealism, Existentialism, Marxism and Behaviouralism.
<b>IV</b>	Dualism in Geography and its need. Dualism between Man v/s Environment, General Geography v/s Regional Geography and Determinism v/s Possibilism.
<b>V</b>	Themes in Geography: Landscape Theme, Man- Environmental Relationship theme, Areal differentiation theme, Spatial and Geometric theme.

**E: Suggested Readings:**

01	Taylor (ED)	Geography of 20 <sup>th</sup> Century, Methew, London,.
02	Cooke and Johnson	Trends in Geography, Pergamon press, London.
03	Majid Hussain	Evolution of Geographical Thought, Rawat Publications, Jaipur, India.
04	Freeman T.W	A Hundred Years of Geography, London.
05	Hartshorne .R	Perspective on the Nature of Geography, Rand M.N and Co.Chicago.
06	Hart, Jensew	Geography: Its History and concepts, Longmans.
07	Dixit R.D.	The Art and Science of Geography.
08	Sudeepa Adhikari	Fundamentals of Geographical Thought, Chaitanya Publishing House, University Road Allahbad (UP).

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To understand the cartographic appreciation of Indian Toposheets.
2.	To interpret the Relief and Drainage, Settlements and Transport network and landuse.
3.	To understand the cartographic appreciation of Foreign Toposheets.
4.	To interpret the features of United Kingdom toposheets.
5.	To interpret the features of United States of American's toposheets.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Cartographic appreciation of Indian Toposheets.
<b>II</b>	Interpretation of Relief and Drainage, Settlements and Transport network and landuse.
<b>III</b>	Cartographic appreciation and interpretation of Foreign Toposheets.
<b>IV</b>	Interpretation of UK Toposheets.
<b>V</b>	Interpretation of USA Toposheets.

**E: Suggested Readings:**

01	Singh R.L	Elements of Practical Geography, Kalyani.
02	Ramamurthy .K	Map Interpretation, Krishnamurthy publishers, Madras.
03	Balbir Singh Negi	Practical Geography, Kedarnath Pub, Delhi.

**Title of the Course: Geog-Prct.1.6: INTERPRETATIONS OF WEATHER MAPS**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To understand the Weather Maps, Signs and Symbols.
2.	To interpret the Interpretation of Indian Weather Maps based on the elements.
3.	To understand the Signs and Symbols of foreign weather maps and Station model.
4.	To interpret the Foreign Weather maps of their weather elements.
5.	To Forecasting the weather condition both Indian and Foreign Weather maps.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Weather Maps, Signs and Symbols.
<b>II</b>	Interpretation of Indian Weather Maps.
<b>III</b>	Signs and Symbols of foreign weather maps and Station model.
<b>IV</b>	Interpretation of Foreign Weather maps.
<b>V</b>	Weather Forecasting.

**E: Suggested Readings:**

01	Singh R.I	Elements of Practical Geography, Kalyani.
02	Ramamurthy .K	Map Interpretation, Krishnamurthy publishers, Madras.
03	Balbair Singh Negi	Practical Geography, Kedarnath Pub, Delhi.

## **Semester-II**

**Title of the Course: Geog-TP 2.1: GEOGRAPHY OF AGRICULTURE**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	<b>1.</b> To define the agriculture geography and factors affecting agriculture
2.	<b>2.</b> To employed the crop combination method of different scholars for the agriculture.
3.	<b>3.</b> To understand the agricultural models and their significance and classifications.

4.	4. To discuss green revolution in India and problems and prospects with regional disparities.
5.	5. To discuss the soil pollutions & erosion, health hazard from ecological point of view.

#### **D: Detail Curriculum:**

Unit	Content
<b>I</b>	Nature, Content and Scope of Agriculture Geography. Factors affecting Agriculture - Physical, Social- Economic and Technological.
<b>II</b>	Systems of Agriculture: Truck Farming (Horticultural) Commercial farming, Intensive and Extensive Agriculture. Concepts of Agricultural Region, Methods of regionalization - Crop combination (Weaver's Method), Crop concentration, diversification (S.S. Bhatia Method), and Agricultural efficiency (Kendal's Method).
<b>III</b>	Models in Agricultural Geography – Significance of Models, Classification of Agricultural Models- Normative, Descriptive and Diffusion Models. Von Thunen's Model and Johnson's Model.
<b>IV</b>	Green Revolution in India- Its problems and Prospects, Regional disparities, inter regional inequalities, intra- regional inequalities and inter crop disparities.
<b>V</b>	Ecological implications of Green Revolution- Salinisation, Water logging, Soil Pollution, Soil Erosion, Fallow Land, Health Hazards, Diffusion of agricultural innovations.

#### **E: Suggested Readings:**

01	Hussain M	Agricultural Geography Inter- India Publications Delhi.
02	Orgon and Munton	Agricultural Geography Mathuew London.
03	Symons L.	Agricultural Geography Bell and Sons London.
04	Tarrant J R.	Agricultural Geography David and Charls London.

**Title of the Course: Geog-TP2.2: GEOGRAPHY OF MARKETING**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

Teaching Hours: 56

04 Hours per week.

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To discuss the marketing geography and its significance along with its development.
2.	To trace the evolutionary process of trade system and beginning of market place trade.
3.	To understand the classification of markets: Permanent, Periodic, Fair, Retailing, Wholesaling and Services.
4.	To discuss locational characteristics of markets, spatio-temporal distributions and Consumer and Trader behaviour and travel patterns.
5.	To discuss the locational characteristics of regulated markets and their development.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Nature, Scope and Significance of Marketing Geography, Development of Marketing Geography, Marketing as a Geographical Phenomenon, Marketing Geography as an area of specialization, Importance of market settlements among the settlement systems.
<b>II</b>	Evolutionary aspects of trade system: Early history of trade and beginning of market place trade.
<b>III</b>	Classification of Markets: Permanent, Periodic, Fair, Retailing, Wholesaling and Services.
<b>IV</b>	Periodic Markets: Locational and distribution characteristics, spatio- temporal relationships, Hierarchy of market centres and their tributary areas. Consumer and Trader behaviour and travel patterns.
<b>V</b>	Regulated Markets: Locational and Developmental characteristics.

**E: Suggested Readings:**

01	Davis R.L	:Marketing Geography, Mathuel and Co, London.
02	Garnier &Delobez	Geography of Marketing, Longman, London.
03	Saxena H.M	Geography of Marketing, Concepts and Methods, New Delhi.
04	Berry. B.J.L	Geography of market centres and retail Distribution, Prentice Hall Engle-wood Cliffs, New Jersey.
05	Bromley R.J	Periodic Markets Daily Markets and Fairs, Swanses.
06	Hugar S. I	Traditional and Non Traditional Market Exchange: a study in spatial development, Ganga Cauvery Publication, Varanasi.

**Title of the Course: Geog-TP 2.3: GEOGRAPHY OF TRANSPORT**

**Credits: 04**

**Maximum Marks: 75 + 25 IA Marks.**

Teaching Hours: 56

04 Hours per week.

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To discuss the geography of transportation, significance and its role in regional economies.
2.	To understand the significance of different means of transportation .
3.	To discuss the spatial interaction complementarities intervening opportunity, Transferability and place and time utility.
4.	To discuss the Graph Theoretic measures for network analysis.
5.	To handle the methods of flow analysis and gravity potential model for regional planning.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Nature, Scope and development of Geography of Transport, Significance of transportation and its role in the development of regional economies.
<b>II</b>	Characteristics and relative significance of different means of transportation Railways, Roads, Water ways and Air ways.
<b>III</b>	Basis for Spatial interaction complementarities intervening opportunity, Transferability and place and time utility.
<b>IV</b>	Graph Theoretic measures and network analysis, Location, Structure, Density Pattern, Order, Measures of connectivity and accessibility.
<b>V</b>	Concept and method of flow analysis, Gravity Potential Model, structure and efficiency. Transport and regional development planning.

**Maximum Marks: 75 + 25 IA Marks.**

Teaching Hours: 56

04 Hours per week.

**C: Course Outcomes: After the completion of this course, students will be able to:**

COS	Content
1.	To discuss the physical features of India, particularly the soil, drainage, vegetables along with water resources of India.
2.	To understand the forest and agricultural resources and their distributions.
3.	To understand the major mineral resources of India, production and distribution.
4.	To understand the major mineral industries their distribution and production.
5.	To discuss the physical aspects, major irrigation projects and major crops in Karnataka.

**D: Detail Curriculum:**

Unit	Content
<b>I</b>	Physical features of India: Soil types, Drainage, Vegetation. Water resources: Three major irrigation projects and Three major Hydro Electric Power projects (Multi Purpose Projects- Nagarjuna, Bhakranangal and Damodar).
<b>II</b>	Forest Resources: Types of forests and their distribution, Forest based industries: Paper Industry. Major Agricultural Crops, their distribution and production; Rice, Wheat, Cotton, Tea and Sugarcane.
<b>III</b>	Distribution, Production and Conservation of Major Mineral Resources: Iron-ore, Manganese, Mica and Coal.
<b>IV</b>	Distribution, Production and Problems of Major Industries; Iron and Steel, Cotton Textile and Fertilizer. India's Foreign Policy and Foreign Trade.
<b>V</b>	Karnataka: Physiography, Soils, Vegetation, and Rainfall, Major Irrigation Projects: Krishna, Tungabhadra and Cauvery. Energy Resources: Thermal, Hydro-Electric and Wind Projects. Distribution and Production of Major Crops: Rice, Jowar, Groundnut, Cotton, Sugarcane and Coffee. Transport and Industrial Development.

**Teaching Hours: 56**

**04 Hours per week.**

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To discuss the human settlements, evolution, size and growth, distribution and spatio-temporal trends of settlements.
2.	To understand the spatial distribution and pattern of settlements with theoretical models and empirical findings.
3.	To discuss the morphological structure of settlements and land use theories, functions of towns along with the difference between rural & urban.
4.	To apply the Christaller and Losch theories for determine the hierarchy of the settlements.
5.	To discuss the issues and policies on population & settlements as well as environment.

### **D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
-------------	----------------

<b>I</b>	Evolution, Size and Growth of Human Settlements: Theories of Evolution of Settlements; Size, Distribution, Spatial and Temporal trends in Size and Growth of Settlements.
<b>II</b>	Distribution Pattern: Spatial Distribution pattern of settlements: Theoretical models and empirical findings.
<b>III</b>	Settlement Structure: Morphological aspects of settlements. Land use theories and functions of towns. Difference between Rural and Urban. Rural house types and building material.
<b>IV</b>	Settlement Hierarchy: Theories of Christaller and Losch .Determination of hierarchy.
<b>V</b>	Issues, perspective and policies on population and human settlements. Interface between human settlements and environment.

1.	To discuss the population geography and its development
2.	To understand the Malthusian and Karl Marx's theory of population
3.	To discuss the Migration
4.	To understand the determinants of population and the concept of optimum
5.	To the Population policies in developing and under developed countries

**D: Detail Curriculum:**

Unit	Content
<b>I</b>	Nature and Scope of Population Geography, Development of population Geography as specialized branch, Factors influencing the distribution of population. Growth trend of population in the world and India. Pattern, Density and Distribution of population.
<b>II</b>	Theories of Population Growth: Malthusian and Karl Marx's theory, theory of demographic transition and its stages.
<b>III</b>	Population Growth and economic development, Migration: Factors, Causes and Types, Internal and International migration.
<b>IV</b>	Fertility, Mortality, Mobility, Determinants of fertility and mortality. Population and resources: Concept of optimum population, over population and under population.
<b>V</b>	Population policies in developing and under developed countries, Population Policy in India.

1.	To discuss the significance of environmental geography and changing relationship between man& environment.
2.	To understand the major biomes, economic importance of forest and National Forest Policy in India.
3.	To discuss the Migration, Factors, Causes and Types, Internal and International migration.
4.	To understand the determinants of population and the concept of optimum, over and under population.
5.	To understand the population policies in developing and under developed countries, Population Policy in India.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Nature, Scope and significance of Environmental Geography, Meaning of Environment, Components of abiotic and biotic environment, the changing relationship of man and Environment.
<b>II</b>	Biomes: major biomes and their importance, Economic significance of Forests, Afforestation and Deforestation. Social Forestry and Agro- Forestry, National Forest Policy in India.
<b>III</b>	Population Growth and economic development, Migration: Factors, Causes and Types, Internal and International migration.
<b>IV</b>	Environmental Degradation: Nature and types of degradation, Causes and effects of Environmental degradation, Problems of Environmental Degradation.
<b>V</b>	Global Warming: Ozone Layer depletion and its consequences, Environmental planning and policies, Environmental Impact Assessment (EIA), Sustainable Development, management of environmental quality.

1.	To employ the Crop Combination Analysis as per J.C. Weaver's Method, Crop Concentration As per S.S. Bhatia's Method.
2.	To able to apply the methods for Functional Classification of Towns Nearest Neighbour Analysis, Centographic Analysis.
3.	To use the Shape Index and Detour Index for different situations.
4.	To emphasis on the application of Quantitative Methods in Geographical Research.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Lorenz Curve, Rank Size Rule, Crop Combination Analysis as per J.C. Weaver's Method, Crop Concentration As per S.S. Bhatia's Method.
<b>II</b>	Functional Classification of Towns by Web's method, Nearest Neighbour Analysis, Centographic Analysis.
<b>III</b>	Applications of Shape Index and Detour Index.
<b>IV</b>	Gravity Potential Model, Break Point, Urban Sphere of Influence.
<b>V</b>	Application of Quantitative Methods in Geographical Research.

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To discuss the development of Aerial photography and their types and mechanism of taking the photographs.
2.	To determine the scales of aerial photography with different parameters.
3.	To use the Pocket Stereoscope and Sketch Master, Mirror Stereoscope instruments.
4.	To define the applications of Remote Sensing: Mechanism of remote sensing, types of remote sensing, types of satellites.
5.	To interpret the Satellite Imageries (Visuals) based on the elements of aerial photos.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Development of Aerial Photography, Types of Aerial Photographs and Mechanism of taking Aerial photographs.
<b>II</b>	Determination of Scale of Aerial Photographs.
<b>III</b>	Elements of Aerial Photo Interpretation, Interpretation of aerial Photo pairs, use of Pocket Stereoscope and Sketch Master, Mirror Stereoscope. Interpretation of Satellite Imageries.

1.	To discuss the origin of natural hazards and their nature.
2.	To classify the natural hazards and their characteristics.
3.	To discuss the Dimensions of Various Natural Hazards.
4.	To understand the hazards managements and their mitigations.
5.	To discuss the hazards management policies and role of National Emergencies and Management Authorities.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Natural Hazards: Meaning, origin and their nature.
<b>II</b>	Classification of Natural Hazards: Climatic, Geomorphic, Geological, Biological and Human induced Hazards.
<b>III</b>	Dimensions of Various Natural Hazards: Earthquakes, Volcanic Eruptions, Land Sliding and Avalanches. Floods and Droughts, Cyclones and Tsunamis, Deforestation and degradation of Bio-diversity.
<b>IV</b>	Hazards Management: Hazard event and Vulnerability, Risk Factors, Prevention measures, Mitigation Responses, Research and Rescue, Survival Skills, Relief and Rehabilitation.

**C: Course Outcomes: After the completion of this course, students will be able to:**

<b>COS</b>	<b>Content</b>
1.	To define the basic principles of Remote Sensing and its concepts.
2.	To understand the historical background of Aerial remote Sensing, types of aerial photos and scales of photos.
3.	To discuss the different types of satellites, platforms and resolutions and orbiting mechanism.
4.	To understand the Principles of Image Interpretation. Visual Interpretation Techniques. Marginal information and decoding.
5.	To discuss the Advantages of Remote Sensing over conventional Surveys, thrust areas of Remote Sensing and development of remote sensing in India.

**D: Detail Curriculum:**

<b>Unit</b>	<b>Content</b>
<b>I</b>	Introduction to Remote Sensing: History and Concepts: Energy sources and Radiation Principles- Energy Interactions in the Atmosphere: Electromagnetic Spectrum, Atmospheric Windows, Energy interactions with Earth Surface features; Spectral reflectance patterns of earth surface features in different wavelengths.
<b>II</b>	Aerial Remote Sensing: Historical and types of photographs, scales of aerial photograph; scale distributions, photographic resolution. Aerial photo interpretation techniques- photo recognition, elements and equipment.
<b>III</b>	Satellite Remote Sensing: Different Satellites: Remote Sensing Platforms, Resolutions: Spectral, Spatial, Temporal and Radiometric resolutions of Satellites, Sensors: Scanning mechanism and orbiting mechanism. Characteristics of IRS.
<b>IV</b>	Principles of Image Interpretation: Elements of Image Interpretation, Visual Interpretation Techniques. Marginal information and decoding.

**B: Ph. D Programme Outcome in Geography:**

<b>PO 1</b>	Enrich the knowledge of understanding the approaches in geographical research with historical, experimentation and case studies.
<b>PO 2</b>	Enhanced the capabilities to prepare the research design in geographical research.
<b>PO 3</b>	Capable to conduct field survey and able to collect the relevant information required for geographical research.
<b>PO 4</b>	Enhanced the capabilities to prepare the maps by handling the Quantitative Techniques, Statistical Methods, and Cartographic Methods in geographical research.
<b>PO 5</b>	Enhance the knowledge and the skills in Map Making procedures and Principles of Cartography and exposure in the technology for handling the spatial and non-spatial data and to integrate in Geographical Environment and Remote Sensing.
<b>PO 6</b>	Enhanced the skills in thesis writing with an effective Introduction, related to the Topic, Review of Literature, Content, Critical Analysis, Language, Planning Strategy and References along with appendix.
<b>PO 7</b>	Enhanced the knowledge in geography through the research not only from the academic point of view, but also the societal needs on any geographical space.
<b>PO 8</b>	Demonstrate the innovative skill developed in the specialized areas of geographical research to extend the horizon of the knowledge in the discipline.
<b>PO 9</b>	Encouragement to develop the multi - discipline in the research to enrich the knowledge in different discipline.
<b>PO 10</b>	Capable to conduct the research and to gain research knowledge by handling the important issues related both human aspects as well as natural point of view with special focuses on Environment.

**Title of the Course: Geog- CTP- I: RESEARCH METHODOLOGY**

**Teaching Hours: 04 Hours Per Week.  
Marks.**

**Maximum Marks: 50 + 50 IA**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Understand the approaches in research and able to discuss.
CO2	Identify the research problem and prepare the research design.
CO3	Collect the information/ data through the field survey.
CO4	Analyze the data by employing the research techniques and prepare the maps by using GIS and Remote Sensing.
CO5	Write the thesis as per the frame of the research and prepare the planning strategy.

**D: Detail Curriculum:**

Unit	Content
I.	Attitude to Research, Approaches in Science Research Historical, Descriptive, Experimental, Case study, Nomothic and Ideographic, Deductive & Inductive, Scientific geographic research.
II.	Research Topic and Design: Identification of problem Study Area, Formulation of Hypothesis, Testing of the Hypothesis and Organization of the chapters
III.	Field survey Data collection: Primary and Secondary sources, observation, perception, Interview, Questionnaire, scheduled and checklist.
IV.	Data Analysis and Mapping: Quantitative Techniques, Statistical Methods, Cartographic Methods, GIS and Remote Sensing.
V.	Thesis writing: Effective Introduction, Concepts Related to the Topic, Review of Literature, Content, Critical Analysis, Language, Planning Strategy and References with Required appendix.

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Understand the Principles of Geomorphology and discuss effectively.
CO2	Discuss the fundamental elements of Climate, structure and composition.
CO3	Identified the Endangered Species of Plants and Animals. Deforestation and Desertification of regions.
CO4	Discuss the Man-Environmental Relationships and human interaction on environment.
CO5	Delineate the regions based on the concept of regions and their types.

**D: Detail Curriculum:**

Unit	Content
I.	Principles of Geomorphology, Interior of the Earth, Isostasy, Thermal Cycles convection current theory, Plate Tectonics Earth Movements, Phases of Mountain Building, Denudation, Cycle of Erosion, Landforms of Humid, Arid, Karst, Glacial and coastal Regions, Erosional and Depositional Features. Types of Streams and Drainage Pattern Development / watersheds. Morphometric Analysis. Gravity & Mass Wasting, Hills lope Development.

II.	Weather and Climate, Structure and Composition of the Atmosphere: Horizontal and Vertical Distribution of Temperature, Air pressure Belts and Planetary Winds. Air Masses, Types of Cyclones and their Effects, Mechanism of Manson winds, classification of Climate, Climate change, origin and Distribution of oceans and continents, Hypsographic Curve, Hydrological cycle, ocean currents, salinity, temperature, Oceans as storehouse of food and Mineral Wealth.
III.	Phytogeographic Regions of the world. Zoogeographical Regions of the world. Endangered Species of Plants and Animals. Deforestation and Desertification Soil-Water and plant systems, Soil Erosion.
IV.	Man-Environmental Relationships, Types of Resource and Resource Analysis Agricultural systems in the world. Main Aspects of Mining Activities, Means of Transportation in the world and their Significance, Growth and Distribution of Population in the world , and Composition of Population, Fertility, Mortality and Mobility(Migration) Patterns, Rural and Urban Settlement systems, and settlement analysis, Settlements as Market centres and their hierarchy, Major Fisheries Grounds in the world. Major Industrial Regions of the world, Trade and Commerce in the world, Main Tourism in the world.
V.	Concept of Region, types of Region, Methods of Regionalization, Regional Analysis, Regional Planning and Stages of Planning, Planning Authorities. Urban and Rural Planning, Land Suitability and Landuse Planning, Planning for Transportation and Marketing Centers; Planning for Backward Ares and Tribal area Areas.

### Area of Specialization

**Title of the Course: Geog-STP-I: GEOMORPHOLOGY AND HAZARD STUDIES**

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Define the principles of Geomorphology, evolution, structure and process.
CO2	Discuss the Isostasy, Continental Drift, Plate tectonics, thermal Cycles, and Convectional Currents
CO3	Understand the concepts of denudation i.e. Weathering and Erosion Physical, Chemical and Biological weathering.
CO4	Discuss the Geomorphic Hazards their Origin and Nature, classification, changing Landform structure.
CO5	Analyze the Hazards Management through the Policies, Risk Management and Mitigation, Survival Skills, Rescue operations, Relief and Rehabilitation.

### **D: Detail Curriculum:**

Unit	Content
------	---------

I	Principles of Geomorphology: Uniformitarian's, Orderly Sequence of Landforms, Complexity of Geomorphic Evolution and Structure, Process and Stage /time etc.
II	Geotectonic Hypothesis:Isostasy, Continental Drift, Plate tectonics, thermal Cycles, and Convectional Currents
III	Denudation:Weathering and Erosion Physical, Chemical and Biological weathering.Maswasting and Slope Development. Fluvial Process and Marphometric Analysis.
IV	Geomorphic Hazzard;Origin and Nature, classification, changing Landform structure with special reference to flood and drought.
V	Hazards Management:Policies, Risk Management and Mitigation, Survival Skills, Rescue operations, Relief and Rehabilitation.

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Understand the Concept of Resource, Classification, Significance and Economic importance.
CO2	Discuss the different types of land resources and utilization along with management of the resource
CO3	Discuss the importance of the Soil Resources and Mineral Resource of economic importance.
CO4	Understand the Climatic regions, Agro-climatic regions, Hydrological Cycle, Green house effect in the region under investigation.
CO5	Discuss the Animal wealth and potentiality, Livestock and dairying Economic Significance of animal wealth, Human Resource Development and Polices.

**D: Detail Curriculum:**

Unit	Content
I.	Concept of Resource, Classification, Significance and Economic importance.
II.	Resources: Land and Water. Land-use, Land capability, Wasteland reclamation, Land Erosion, Degradation, Wasteland reclamation, Sources of water and potential, watershed Management, rain water harvesting water pollution, and Land water Management.
III.	Soil Resources and Mineral Resource. Soil types, Profile Soil Properties, Permeability, and Infiltration soil fertility, Ph-value, Soil erosion, Soil Pollution, Soil Management, Metallic and Non-Metallic Minerals, Economic Significance of Minerals.
IV.	Climate and Vegetation Resource: Climatic regions, Agro-climatic regions, Hydrological Cycle, Green house effect, Air pollution, and controlling measures, Types of Vegetation and distribution of biomes, deforestation and its consequences, a afforestation and forest polices.
V.	Animal and Population Resources: Animal wealth and potentiality, Livestock and dairying Economic Significance of animal wealth, Human Resource Development and Polices.

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Discuss the concept of settlements and their types.
CO2	Trace the urbanization process, trends, stages and migration.
CO3	Understand the Rural depopulation, Socio-Economic conditions of Rural Settlements: Spatial patterns of Rural Settlements.
CO4	Prepare the strategic urban planning based on the theories and models.
CO5	Prepare the Rural Development Planning and deal with Policies.

**D: Detail Curriculum:**

Unit	Content
I.	Origin and Evolution of Settlements, Concept of Rural and Urban Settlements, Rural Urban Continuum, Urban Fringe and Urban Corridor.
II.	Process of Urbanizations, trends, phases/stages, Urban sphere of influence, spatial movements and interaction, migration.
III.	Types of Rural Settlements, Rural depopulation, Socio-Economic conditions of Rural Settlements: Spatial patterns of Rural Settlements.
IV.	Urban Planning: Theories/models of Urban, Land –use, Principles of Urban Planning/Master Plan.
V.	Rural Development Planning and Policies.

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Understand the Concepts of Marketing Geography and its significance.
CO2	Discuss the evolutionary process of markets with the theories.
CO3	Classify the markets based on its functioning process.
CO4	Determine the hierarchy of the market settlements with related parameters.
CO5	Prepare the planning strategy for rural development as well as regional development.

**D: Detail Curriculum:**

Unit	Content
I.	Concepts of Marketing Geography: Marketing as Geographical Phenomena, Marketing Geography as an area of specialization, Importance of Market Settlements among the settlement systems.
II.	Evolutionary aspects of trade system: Early history of trade and beginning of market place trade, Emergence of periodic markets, Theories of market origin.
III.	Classification of Market: Permanent, Periodic, Fair, Retailing, Wholesaling and Services
IV.	Spatio-Temporal distribution of markets, Synchronization, characteristics of Markets, Hierarchical Integration of Periodic markets in the market systems
V.	Market centers and Integrated Area development, Role of Periodic markets in the developments of rural India, Regulated markets and regional development.

#### Title of the Course: Geog-STP- V: POPULATION STUDIES

Teaching Hours: 04 Hours Per Week.

Maximum Marks: 50 + 50 IA Marks.

#### C: Course Outcomes: After the completion of this course, researcher will be able to:

CO1	Discuss the Geographical Perspective of Population studies and population distribution.
CO2	Understand the Theories of population and its distribution in India and world with Fertility Morality and Mobility Factors.
CO3	Analyze the Growth of Population and its distribution in India and World. Fertility Morality and Mobility Factors.
CO4	Discuss the Concepts of Optimum, over and under population, Population explosion. Population and resource balance
CO5	Critically assess the Population Polices in Developing and Underdeveloped countries Population Polices, Measure of Population Control

#### D: Detail Curriculum:

Unit	Content
I.	Geographical Perspective of Population studies Physical/Socio-Economicdeterments of Population distribution.
II.	Theories of population and its distribution in India and world Fertility, Mortality and Mobility Factors. Demographic Transition model Phases.
III.	Growth of Population and its distribution in India and World. Fertility Morality and Mobility Factors

CO1	Understand the Conceptual Basics of Regional Planning, Scope, Goals, Objective and need for Regional Planning and Regionalization.
CO2	Discuss the Concept of Region, Types of Region, Formal and Functional, Economic and Physical Planning Region.
CO3	Understand the basics of planning and types of Physical and Economic Planning, Sectoral and Spatial Planning, Centralized and decentralized planning.
CO4	Prepare the Planning strategy for Urban and Rural land use, Industries, Draught prone areas, Resource and Environmental issues.
CO5	Discuss the Management and Sustainable Development of Resources: Human, Water, Land, Forest, Mineral and Food

**D: Detail Curriculum:**

Unit	Content
I.	Conceptual Basics of Regional Planning: Definition, Scope, Goals, Objective and need for Regional Planning and Regionalization.
II.	Region in Regional Planning: Concept of Region, Types of Region, Formal and Functional, Economic and Physical Planning Region, Methods of Regionalization.
III.	Basics of Planning: Concepts of Types of Planning : Physical and Economic Planning, Sectoral and Spatial Planning, Centralized and decentralized planning.
IV.	The Practical of Regional Planning: Planning for Urban and Rural land use, Industries, Draught prone areas, Resource and Environmental issues.

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Understand the Nature, Scope and Significance of Environmental Geography
CO2	Discuss the Biomes, importance and economic significance of forests. Afforestation, deforestation – causes and Consequences
CO3	Examine the Nature and Types of degradation, Cause and effects of Environmental degradation.
CO4	Discuss the Environmental Pollution – Air, Water, Land and noise pollution, and their consequences. Measures to control environmental Pollutions.
CO5	Discuss the Global Warming, Ozone Layer depletion and its consequences. Environmental Impact assessment (EIA), Sustainable Environmental Development

**D: Detail Curriculum:**

Unit	Content
I.	Nature, Scope and Significance of Environmental Geography, Meaning of Environment, biotic and abiotic Components of environment
II.	Biomes: Forest and types of Forest biomes. Importance and economic significance of forests. Afforestation, deforestation – causes and Consequences. Social forestry and Agro forestry, National forest policy and India.

III.	Environmental Degradation – Nature and Types of degradation, Cause and effects of Environmental degradation.
IV.	Environmental Pollution – Air, Water, Land and noise pollution, and their consequences. Measures to control environmental Pollutions.

**Teaching Hours: 04 Hours Per Week.**

**Maximum Marks: 50 + 50 IA Marks.**

**C: Course Outcomes: After the completion of this course, researcher will be able to:**

CO1	Examine the Physical, Socio-Economic and Technological Factors Affecting the Agriculture.
CO2	Discuss the Agricultural Systems in the World: Commercial Farming, Truck Farming, Intensive and Extensive Agriculture, Subsistence Agriculture.
CO3	Discuss the agricultural regions by employing the Weavers Crop-Combination technique. Kendal's method of Agricultural Efficiency, Von Thunen's Model, S.S. Bhatia's Crop Concentration Method.
CO4	Discuss the Green Revolution in India and different pattern of agricultural crops.
CO5	Analyse the problems of agriculture and Agricultural policies in India.

**D: Detail Curriculum:**

Unit	Content
I.	Nature and Scope of Agricultural Geography. Physical, Socio-Economic and Technological Factors Affecting the Agriculture.
II.	Agricultural Systems in the World: Commercial Farming. Truck Farming, Intensive and Extensive Agriculture, Subsistence Agriculture.
III.	Agricultural Region and Regionalization: Weavers Crop-Combination technique. Kendall's method of Agricultural Efficiency, Von Thunen's Model, S.S. Bhatia's Crop Concentration Method.
IV.	Green Revolution in India: Regional Disparities. Production and Distribution of Major agricultural crops: Wheat, Rice, Jowar, Maize, Sugarcane, Cotton, Tea & Coffee plantations.

#### C: Course Outcomes: After the completion of this course, researcher will be able to:

CO1	Discuss the Emergence of Tourism as an Industry, Classification of Tourism, Domestic and International Tourism.
CO2	Discuss the Types of Tourist Sites and Heritage buildings in India and Karnataka
CO3	Critically Assess the Impact of tourism on environment.
CO4	Examine the Infrastructural Facilities, Transport Routes: Waterways, Railways, Roadways and Airways Transport Agencies and Guides. Hotels and Motels.
CO5	Prepare the Tourism Planning in India and Karnataka, Tourism Policies. Spatial Dimensions in Tourism Planning.

#### D: Detail Curriculum:

Unit	Content
I.	Meaning and Nature of Tourism, Emergence of Tourism as an Industry, Classification of Tourism, Domestic and International Tourism.
II.	Types of Tourist Sites: Physical, Cultural and Religious Sites, Major Tourist sites in the world, India and Karnataka significance of tourist sites and buildings. Heritage buildings and sites in India and Karnataka
III.	Tourism and Environment: Impact of tourism on environment. Physical, Cultural and economic impacts. Coastal Tourism, Island Tourism, Mountain Tourism Inland water and Countryside Tourism, Hill Stations.

## **PROGRAMME SPECIFIC OUTCOMES (PSOS)**

After completion of this programme, the student will be able to:

1. Understand the different branches, concepts and its application in the field of Geology.
2. Learn the practical skills to work in the field as a professional Geologist, Hydrogeologist and Geophysicist.
3. Understand the needs and requirements of different agencies/stakeholder in the field of mineral development and water technology.
4. Effectively use Information and Communication Technology (ICT) in the study of remote sensing and geographic information systems and work as a GIS Analyst.

<b>Paper Code and Name</b>	<b>CTAG:1.1 STRATIGRAPHY AND PALAEONTOLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Student will understand the principle of chronological information
Unit-II	Student will understand the different lithologies
Unit-III	Student will be able to reconstruct taphanomic history of fossil assemblage
Unit-IV	Student will be able to understand the various morphological features, ages and their depositional environment

**CTAG-1.1. STRATIGRAPHY AND PALAEONTOLOGY**

**UNIT I**

Definitions of Craton, Shield, Basement and Supracrustals. Archeans of Aravallis, Extra Peninsular, Central India and Karnataka craton.

**12 hrs.**

**UNIT II**

Proterozoic successions – Cuddapah, Kaladgi and Vindhyan basins. Gondwana Formations of India – their tectonic relations, origin and distribution. Cretaceous Formations of Tiruchirapally. Deccan Traps – Classification, distribution and age. Siwalik Formations.

**12 hrs.**

**UNIT III**

Principles and procedures in paleontology, Nature and methods of preservation of fossils, Importance and use of fossils, Origin and evolution of life, Life zones in the ocean..

**12 hrs.**

**UNIT IV**

Taxonomic classification, Morphological features, Evolutionary trends and geological distribution of Principle groups of invertebrates - Corals, Brachiopods, Pelcypods, Cephalopods, Trilobites and echinoids. Plant life through ages, Gondwana flora.

Micropalaeontological studies – study of shell morphology, Classification and the geological distribution of foraminifera, Pollen and Spores.

**12 hrs.**

**Total 48 hrs**

<b>Paper Code and Name</b>	<b>CTAG:1.2 MINERALOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Student will be able to clearly understand and differentiate Physical and Optical properties of different groups of minerals.
Unit-II	Students will be able to understand the crystal structures, different types of silicate structures along with the role of Isomorphism and Polymorphism.
Unit-III	Students will be able to understand the role of light in the optical mineralogy and behaviour of light in Isotropic and Anisotropic substances.
Unit-IV	Students will be able to understand the crystal structures developed in the different minerals with their symmetric classes, classification and twinning structures.

## **CTAG -1.2. MINERALOGY**

### **UNIT I**

General introduction to subject mineralogy, Physical and optical properties of minerals. General study of the following groups of minerals: Native elements- Gold, Silver, Copper and platinum

Sulphides- Stibnite group, Oxides–Carbonates (Calcite and aragonite), Silicates-Mica , feldspar & Feldspathoids, pyroxenes, amphibolites, Garnet and olivine

**12 hrs.**

### **UNIT II**

Crystal structure in general, Silicate structure (Types of silicate structures), Isomorphism and polymorphism

**12 hrs.**

### **UNIT III**

Conception of Optics (nature of light, simple harmonic motion, wave motion and wave surface). A general study of isotropic and anisotropic substances. Reflection, refraction, index of refraction, critical angle birefringence, pleochroism and extinction angle

**12 hrs.**

### **UNIT IV**

Elementary concept of crystallography

Classification of crystals into six crystal systems. A brief study of 32 symmetry classes of crystals. Hermann Maugan and Schoenflies symbols. Crystal formation and irregularities (both internal & external) in crystals. Twinning in crystals

12 hrs.

**Total 48 hrs.**

### **Books Recommended :**

1. Introduction to Rock forming Minerals Vol. 1 to 4: Deer, Howie & Zussman, Longmans, 1966.
2. Dan's manual of Mineralogy : Hurlbut, C.S. Hohn Wiley 1959.
3. Mineralogy of Students : Belady Mill Oliver & Boyd, 1972.

7. Elementary Crystallography : Burger. M.
8. Essentials of Crystallography : Flint Peace Publi.
9. Elements of X-ray Crystallography : Azaroff.
10. A text book of Mineralogy : E.S. Dana.
11. Elements of crystallography by Phillips.

<b>Paper Code and Name</b>	<b>CTAG:1.3 GEODYNAMICS AND STRUCTURAL GEOLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Major divisions of the Earth and concepts of Plate Tectonics
Unit-II	Understand different Orogenic Belts of India and Global tectonics
Unit-III	Understand the basic concept of Structural Geology-stress & strain
Unit-IV	Understand the concepts of Shear Zones, Faults, Unconformities & Joints

## **CTAG.1.3. - GEODYNAMICS AND STRUCTURAL GEOLOGY**

### **UNIT I**

Introduction to Major divisions/layers of the earth. Continental and Oceanic crusts. Plate tectonics. Seafloor spreading, Mid oceanic ridges

**12 hrs.**

### **UNIT II**

Island Arcs, Oceanic Trenches, Continental Margins, Hot spots, Orogenic Mountain Belts, Orogenic Belts of India, Global tectonics in relation to Plate Tectonics.

**12 hrs.**

### **UNIT III**

Concept of Stress and Strain. Strain analysis using deformed objects. Geometric Classification of Folds. Mechanics of folding. Foliations and Lineation.

**12 hrs.**

#### UNIT IV

Shear Zones – Geometry and Mechanics, Large scale thrusts and their significance in tectonics Classification of unconformities. Faults – Mechanics, classification and their recognition in the field Joints- Mechanics and classification

**12 hrs.**  
**Total 48 hrs**

10. Tectonics by E.M. Moores, R.J. Twiss, Freeman & Co.,

Paper Code and Name	CTAG:1.4 GEMSTONES AND INDUSTRIAL MINERALS
COURSE OUTCOMES (COs)	
After completing this paper, the students will be able to:	
Unit-I	Understand the basics of gemstones and able to identify originality and qualities of different types of gemstones.
Unit-II	differentiate the Inorganic and organic Gemstones, further able to identify natural and synthetic gemstones.
Unit-III	identify suitable industrial Mineral for Abrasive, Chemical and Refractory industries
Unit-IV	identify specified industrial Mineral for Fertilizer Glass and building materials

### CTAG.1.4. – GEMSTONES AND INDUSTRIAL MINERALS

#### UNIT I

Introduction to precious and semi-precious stones. Gem Industry in India, Qualities of Gemstones. Classification of Gemstones. Study of the following gemstones: Diamond, Topaz, Ruby, Sapphire, Emerald, Aquamarine, Tourmaline, Alexandrite, Lazurite and Turquoise.

**12 hrs.**

## **UNIT II**

Quartz varieties of gemstones, Pearl, Coral and Amber, Zodiacal and astrological gemstones, Distribution of gemstones in India.

**12 hrs.**

## **UNIT III**

Characters of different materials used in following industries with respects to their specification and preparations. Ceramic, Abrasives, Chemical and Refractory industries.

**12 hrs.**

## **UNIT IV**

Fertilizers, Paints, Glass, and Cement industries, Building materials.

**12hrs.**

**Total 48 hrs.**

## **Books Recommended :**

1. The geology of ore deposits – John, M. Guilbert and Chartes, F. Park. Jr. W.H. Freeman and Co., New York 1986.
2. Interpretation of ore textures – Bastin E.S.
3. Economic Mineral Deposits – Bastin A.H.
4. Ore Microscopy – Cameron E.N.
5. Ore Deposits – Park Jr. C.G.
6. Geology of Mineral Deposits Smirnor U.J.
7. The Ore Minerals and their intergrowths – Raibor
8. India's Mineral resources – Krishna Swamy S.

## **PRACTICALS**

<b>Paper Code and Name</b>	<b>CRAG:1.5 PALAEONTOLOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Student will be able to interpret the modes of life of fossil organism and evolutionary relationships of invertebrates.	

### **CRAG. 1.5. -PALAEONTOLOGY AND VIVA**

Illustration and identification of important taxa of mega and micro fossils belonging to the following groups :- Brachiopoda, Pelecypoda, Gastropoda, Cephalopoda, Trilobita, Foraminifera, Gondwana Flora.

<b>Paper Code and Name</b>	<b>CRAG:1.6 MINERALOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Students will be able to identify and spot the different physical properties of various minerals in the lab as well as in the field; identify different minerals under petrological microscope by understanding the optical properties of various minerals; identify the crystal forms and the crystal system of the various minerals; calculate the axial ratio of different crystal systems using stereonet.	

### **CRAG. 1.6. -MINERALOGY AND VIVA**

Study of minerals belonging to major groups and their identification with aid of megascopic characters and optical properties. Identification of crystals and crystal systems. Calculation of axial ratios of minerals of tetragonal, orthorhombic and monoclinic systems by stereographic methods.

<b>Paper Code and Name</b>	<b>CRAG:1.7 STRUCTURAL GEOLOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Measure strike and dip in the field; prepare base map and geological map and construct cross-sectional map

## **CRAG. 1.7. – STRUCTURAL GEOLOGY AND VIVA**

Study of Geological maps, tracing of outcrops, construction of geological cross sections. Dip and strike problems. Interpretation of underground structure from borehole data.

### **M.Sc. II Semester** **THEORY**

<b>Paper Code and Name</b>	<b>CTAG:2.1 PETROLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand the basics concepts of magma, its composition and classification
Unit-II	Understand different systems of magma
Unit-III	Understand the concepts of Metamorphic rocks
Unit-IV	Understand the concepts of Sedimentary rocks

## **CTAG.2.1: PETROLOGY**

### **UNIT I**

Petrography and composition of Magmatic rocks (Fabric, rock forming minerals and classification). The Origin and evolution of magma.

A brief study of the following groups of rocks:

1. Calc- alkali volcanic rock body
2. Calc-alkali plutonic rock body
3. Basaltic and Ultramafic rock bodies
4. Alkali rock bodies

**12 hrs.**

### **UNIT II**

A general study of the composition of magma, crystal-liquid-vapor equilibrium in magma system and magma generation and diversion

**12 hrs.**

### **UNIT III**

A general study of metamorphic bodies and systems. Petrography and compositional aspects of metamorphic rock bodies. Metamorphic facies, types of metamorphism. Role of temperature and pressure in metamorphism. General metamorphic rock bodies: schists, gneisses, amphibolites, granulites and eclogites.

**12 hrs.**

#### UNIT IV

Origin of sediments and formation of sedimentary rocks. Weathering, transportation and deposition. Lithification and diagenesis. Structures and textures of sedimentary rocks. A general study of the following sedimentary rocks. Sandstone, limestone and argillaceous rocks. Important sedimentary basins of India.

**12 hrs.**

**Total 48 hrs.**

Paper Code and Name	CTAG:2.2 MINING GEOLOGY
COURSE OUTCOMES (COs)	
After completing this paper, the students will be able to:	
Unit-I	Understand different concepts and method involved in mining
Unit-II	Understand how to develop mines (open and underground) and sampling techniques
Unit-III	Understand different types and methods of drilling
Unit-IV	Understand different concepts involved in Coal Mining

## **CTAG 2.2. MINING GEOLOGY**

### **UNIT I**

Introduction of Mining and mining technologies. Methods of mining: Alluvial, Opencast and Underground mining methods.

**12 hrs.**

### **UNIT II**

Shaft sinking and Development of mines. Mine sampling. Guides to ore search – Mineralogic, Stratigraphic, Lithologic and Structural guides.

**12 hrs.**

### **UNIT III**

Geological parameters for mine planning and designing. Drilling: Methods and types of drills their uses. Type and specification of drilling methods in various geological formations.

**12 hrs.**

### **UNIT IV**

Coal mining: A comparative study of room and pillar with Long and wall method of mining

**12 hrs.**

**Total 48 hrs.**

### **Books Recommended :**

<b>Paper Code and Name</b>	<b>CTAG:2.3 ORE GEOLOGY, INDIAN MINERAL DEPOSITS AND ENERGY RESOURCES</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Introduce students to various processes of mineral formation
Unit-II	Students understands why certain parts of the Earth are mineralized by introducing mineralization
Unit-III	Students will know occurrence, origin and economic importance of metallic and non-metallic deposits
Unit-IV	Students will understand various energy resources and distribution of coal and petroleum in India

## **CTAG.2.3: ORE GEOLOGY, INDIAN MINERAL DEPOSITS AND ENERGY RESOURCES**

### **UNIT I**

Introduction. Geological processes of formation of economic mineral deposits, Magmatic, Hydrothermal, Residual and Mechanical concentration, Oxidation and supergene enrichment.

**12 hrs.**

### **UNIT II**

Sedimentation and Evaporation, Metamorphism and Metasomatism. Geothermometry, Metallogenic Provinces and Epochs, Global metallogeny as related to plate tectonics.

**12 hrs.**

### **UNIT III**

Study of important metallic and non-metallic deposits of India with reference to Geology, Mode of occurrence, Mineralogy and Indian distribution of the following:- **Metallic deposits:** Iron, Manganese, Copper, Lead, Zinc, Gold, Silver and Aluminum. **Non metallic deposits:** Asbestos, Barites, Magnesite, Mica, Clay, Phosphorite, Sillimanite, Kyanite and Andalusite.

**12 hrs.**

### **UNIT IV**

**Non-Renewable – Petroleum :**Types of hydrocarbons, Origin, migration and entrapment of petroleum. Properties of source and reservoir rocks.**Structural traps:** Anticlinal traps, Fault traps, Diapiric traps, Combination traps and Hydrodynamic traps. **Techniques of exploration:** oil exploration, exploration methods and elements of a petroleum prospect, Reserves and resources. Petroliferous basins of India – Assam Kutch Gujarat, Bombay High, Cauvery, Godavari and Krishna Basins. **Coal:** Origin of Peat, Lignite, Bitumenous and Anthracite. Important coal measures of India – Gondwana, Tertiary. **Renewable Energy Resources:** Solar, Wind and Water.

**12 hrs.**

**Total 48 hrs.**

### **Books Recommended :**

Unit-I	Understand the origin and divisions of the Earth
Unit-II	Understand different types of Igneous, Sedimentary and Metamorphic Rocks
Unit-III	Understand concepts of weathering and erosion
Unit-IV	Understand concepts of Hydrologic Cycle

## **ETAG 2.4 : EARTH SCIENCE - I (ELECTIVE)**

### **UNIT I**

Origin of the Earth. Four subsystems of the Earth : lithosphere, biosphere, atmosphere, hydrosphere, Uniformitarianism. Importance of Earth science. Materials of Lithosphere.

**12hrs.**

### **UNIT II**

Rock cycle, Igneous rocks, Sedimentary rocks and Metamorphic rocks. Resources from rocks and minerals

**12hrs.**

### **UNIT III**

Weathering: Definition, Mechanical and Chemical weathering. Rates of weathering, Soil formations, Soil types and erosion.

**12hrs.**

### **UNIT IV**

Hydrologic cycle, Running Water: Work of streams, stream valleys and floods. Drainage basins and pattern. Groundwater: Distribution and movement of groundwater, Hot springs, Geysers

**12hrs.**

**Total 48 hrs.**

<b>Paper Code and Name</b>	<b>CRAG:2.5 PETROGRAPHY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Identify and classify megascopically and microscopically different igneous, sedimentary and metamorphic rocks	

**CRAG. 2.5 – PETROGRAPHY AND VIVA**

Classification, identification and petrographic study of the following groups / families based on megascopic, microscopic and structural studies of Igneous rocks ; Granites, granodiorites, gabbros-ultramafics, lamprophyres, andesites, dacites, rhyolites and volcanic glasses, Sedimentary rocks- megascopic and microscopic identification of common sedimentary rocks : sandstones, greywackes, siltstones, shales, limestone, dolomite, conglomerate, Heavy mineral analysis. Metamorphic rocks – megascopic and microscopic identification of schists, amphibolites, gneisses, granulites, eclogites and hornfelses.

<b>Paper Code and Name</b>	<b>CRAG:2.6 ORE GEOLOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Students will be able to interpret various properties exhibited by the different ores	

## **CRAG. 2.6 – ORE GEOLOGY AND VIVA**

Megascopic and microscopic identification of important ore minerals, study of typical structures / textures and their genetic significance.

<b>Paper Code and Name</b>	<b>CTAG:2.7 ORE RESERVE ESTIMATION AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand concepts of estimation and calculation of Ore reserves and generate different cross-sectional and contour maps

## **CRAG. 2.7 ORE RESERVE ESTIMATION AND VIVA**

Estimation and calculation of ore reserves. Regular and irregular samples, Underground mine samples. Ore deposits with over burden. Hidden ore bodies, use of trigonometric functions in estimation of ore reserve. Preparation of cross section of underground mine data and calculation of ore reserves. Preparation of contour maps to represent depth to ore body and concentration specific metals.

## M.Sc. III Semester THEORY

<b>Paper Code and Name</b>	<b>CTAG:3.1 GEOCHEMISTRY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand different geochemical classification of the Earth
Unit-II	Understand different geochemical processes involved in sedimentation and metamorphism
Unit-III	Understand Thermodynamics of magmatic crystallization and introduction to concepts of meteorites
Unit-IV	Thermodynamics of metamorphism, Metamorphic phase rule and diagrams

### CTAG. 3.1. GEOCHEMISTRY

#### UNIT I

Geochemical classification of elements: Lithophile, Siderophile, Chalcophile and Atmophile elements with examples. Structure of the earth : composition of crust, Mantle and core. Lattice energy of crystals: Ions, Atoms and Energy, Lattice energy estimated using Born – Haber Cycle. Gibb's Free Energy : Thermodynamic system, Thermodynamic potential, State function, STP and Rule of thumb and Derivation of Gibbs free energy. Oxygen Fugacity: Definitions, concepts and geology. Godich's stability series.

**12 hrs.**

#### UNIT II

Physico-chemical factors in sedimentation: Ionic potential, Redox potential and Hydrogen ion concentration. Colloids and Colloidal processes: Collidal stability system, Classification of colloids. Metamorphism as geochemical processes.

**12 hrs.**

#### UNIT III

Thermodynamics of magmatic crystallization, Introduction of magma : Composition of the magma, Partial melting Geochemical implications of partial melting, Effect of composition on physical properties of magmas, Fractional melting, Fractional Crystallization, assimilation and magma mixing. Introduction to Meteorites, origin and their composition and classification and mineral constituents of meteorites.

**12 hrs.**

#### UNIT IV

Mineralogy of metamorphic rocks and stability of minerals. Thermodynamics of metamorphism, Metamorphic phase rule: Illustration of phase rule, Metamorphic phases and phase diagrams. Principal types of phase diagrams (ACF, AKF and AFM Diagrams) Geochemical cycle, the Earth as a physico chemical system, Crust as a separate system.

**12 hrs.**

**Total 48 hrs.**

COURSE OUTCOMES (COs)	
After completing this paper, the students will be able to:	
Unit-I	Understand the origin of water and Hydrological Cycle
Unit-II	Understand the concept of Vertical distribution of Water; Hydrogeological Properties of Rocks.
Unit-III	Understand the concepts of Springs, Aquifer, Pumping Tests, Water Quality for different purposes and Well technology
Unit-IV	Understand the concepts of Rain Water Harvesting, Artificial Recharge & Conjunctive Use of SW & GW; Concepts of Sea Water Intrusion; Groundwater Provinces of India; Groundwater Exploration by various methods.

### CTAG.3.2 : HYDROGEOLOGY

#### UNIT I

Definition of hydrology, hydrogeology and groundwater hydrology, Importance of water, Worldwide water resources. Different states of water. Comparison of surface water and groundwater. Origin and types of water. Hydrological cycle : Definition and components of hydrological cycle. Precipitation – types of precipitation raingauge, spacing of raingange stations, Factors controlling evaporation, evapotraspiration, surface runoff, infiltration influent and effluent situations. Water budgeting, water balance studies.Impact of hydrological cycle.

**10 hrs.**

#### UNIT II

Subsurface distribution of water: Zone of aeration soil zone, intermediate zone (pellicular & gravitational water), zone of saturation, water table, ground water. Factors influencing seepage of water in different ways. Occurrence of groundwater: Agencies that produce and destory openings Hydrogeological properties of rocks : porosity, permeability, specific yield, specific retention, specific absorption, Transmissivity, storativity, hydraulic

conductivity specific capacity, void ratio, specific storage, hydraulic diffusivity, hydraulic resistivity, leakage coefficient, leakage factor, drainage factor, storativity ratio. Laws governing porosity. Groundwater in fractured formations. Factors influencing porosity and permeability. Yield in different rocks. Classification of rocks based on degree of permeability. Classification of rocks with respect to hydrogeological characters.

**10 hrs.**

### **UNIT III**

Springs: Definition, origin, types of springs: Causes for water table fluctuations: Groundwater flow, equation of continuity, properties of water in relation to flow. Laminar (viscous) and turbulent (non viscous) flow, flow nets, flow lines Definitions of aquifer, aquiclude, aquitard, aquifuge. Types of aquifers: unconfined, confined, perched, semi unconfined and semi confined. Darcy's law and its application. Pumping Tests: Definition, purpose of pumping test, Well and aquifer tests Precautions before pumping tests, Assumptions in analytical methods, Selection of observation well, Water level measurements, Discharge measurements: Volumetric, Orifice weir, Rectangular and triangular V notch, Jet methods, Estimation of storativity and transmissivity. Water Quality: Physical and chemical characters, Major, Secondary, minor and trace constituents, Criteria for different uses, Graphical representations of chemical data, Determination of agricultural suitability, Role of rocks and minerals in water quality Well technology : Classification of wells – vertical, horizontal, cased, Well development, sterilization, stimulation, Pump and power units, Deterioration and maintenance of wells, Incrustations in wells, Corrosion and its protection in wells, Abandoned wells

**12 hrs.**

### **UNIT IV**

Hydrogeology of arid and wet lands: Occurrence of Groundwater and its characters. Artificial recharge of groundwater: Criteria to adopt, Feasibility, Pre-study, Different methods: basin, ditch – furrow, channel, pit flooding, irrigation and agricultural practices, induced recharge, recharge well method, subsurface dams, recharge of urban storms. Rain water harvesting: Definition, Requirement of harvesting (essential and solution). Methods of rainwater harvesting. Direct storing and recharge of rainwater, roof top harvesting, open space harvesting, Rainwater harvesting structures. Conjunctive use of surface and groundwater: Definition, basic studies, advantages of storing water on surface or groundwater, Restrictions in exploration of groundwater, Beneficial effects of conjunctive use in canal commands. Disadvantages in implementing conjunctive use programmes. Surface water harvesting management techniques. Groundwater provinces of India: Precambrian crystalline and sedimentary, Gondwana, Deccan Trap, Cenozoic sedimentary and fault basin, Ganges – Brahmaputra Alluvial Himalayan high lands. Sea water intrusion in coastal aquifers: Definition, interface, different situation during sea water intrusion, Ghyben – Herzberg relation, Identification of saline zones and interface, prevention and control of sea water intrusion. Occurrence of water in consolidated, semi consolidated and unconsolidated rocks. Consolidated rocks: fracture systems, weathering, groundwater occurrence and movement, aquifer characters and well yield. Yield in igneous metamorphic and volcanic rocks. Semi consolidated rocks: Aquifer characters and well yield in sandstones shales and limestones, Unconsolidated rocks: Aquifer characters in alluvial fans, piedmont deposits, valley fills, flood plain deposits, coastal deposits, glacial deposits, eolian deposits. Groundwater Exploration: Definitions, Study of features related to

geomorphology, climate, geology, aquifer characters, hydrogeochemistry, Land and water use, Remote Sensing application (land use and land formations), Study of toposheets, Water dowsing and Electrical resistivity method. Radio isotopes in hydrogeological studies. Paleohydrological studies.

<b>Paper Code and Name</b>	<b>CTAG:3.3 MINERAL ECONOMICS AND ENGINEERING GEOLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Present status of availability of metallic minerals in India and other countries, its production and its market value/economy.
Unit-II	availability of Energy minerals in India and other countries, its production and its market value/economy and further administrative aspects.
Unit-III	select the suitable locations and materials for construction of major and minor projects like Dam, Reservoir, Bridges, Tunnel etc
Unit-IV	anticipate the geological problems occurring during and post construction of major geotechnical projects

## **CTAG. 3.3. MINERAL ECONOMICS AND ENGINEERING GEOLOGY**

### **UNIT I**

Role of India in the world market of the following minerals: Iron, Manganese, Barytes, Asbestos, Lead and zinc, Copper, Mica, Role of India in the world market of following minerals

**12 hrs.**

### **UNIT II**

Coal, Petroleum, Atomic Minerals, Strategic, Critical and Essential minerals: Definition, Production and Reserves, Listing of various minerals of India into the above categories Exclusive economic zones of India and their strategic importance in the production of marine minerals, National mineral policy of India and Mineral Legislation.

**12 hrs.**

### **UNIT III**

Mechanical properties of rocks and soils, Geological investigations of river valley projects Dams and Reservoirs, Tunnels – types methods and problems. Bridges – types and foundation problems

**12 hrs.**

### **UNIT IV**

Shore line engineering, Concrete aggregate – Sources, alkali aggregate reaction, A seismic designing – Seismicity in India, Earthquake resistant structures, Groundwater problems related to foundation work, mining canals and tunnels, Geotechnical case studies of major projects in India, Role of minerals in National economy and development of indigenous production

<b>Paper Code and Name</b>	<b>ETAG:3.4 EARTH SCIENCE-II (ELECTIVE)</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand the concepts of Glaciers and Earthquakes
Unit-II	Understand the concepts of Major layers of the Earth and Theory of Plate Tectonics
Unit-III	Understand the concept of Geological Time Scale which describes the major events happening
Unit-IV	Concepts of oceans, Renewable and non-renewable resources and Natural Hazards

### **ETA.G. 3.4. EARTH SCIENCE – II (ELECTIVE)**

#### **UNIT I**

Glaciers, Deserts and wind: Glacier erosion and deposits. Geologic process in arid climates. Wind erosion and deposits. Earthquakes and Earth interior: Earthquake waves, epicenters, intensity and magnitude of Earthquakes. Prediction of Earthquakes.

**12hrs.**

#### **UNIT II**

Major layers of the Earth. Plate Tectonics: Plate boundaries, Sea floor spreading, continental margins, ocean ridges, Island arcs, hotspots, mountain building activities. Volcanoes: Magma and its composition, Lava flows, Types of volcanoes.

**12hrs.**

#### **UNIT III**

Geologic Time Scale: Evolution of Earth's atmosphere, Precambrian time, Paleozoic era, Mesozoic era, Cenozoic era and introduction to Paleontology.

**12hrs.**

#### **UNIT IV**

Oceans: Composition of sea water, Ocean's layered structure. Earth Resources: Renewable and non renewable resources. Natural Hazards.

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Understand and analyse various geochemical parameters using titration method and using instruments such as AAS, Spectrophotometer etc	

**CRG. 3.5: GEOCHEMISTRY AND VIVA**

Analysis of Iron Mangnese, Copper ores. Analysis of Limestones and dolomites, Demonstration of working AAS, IR, Spectrometer, Flame Photometer, pH meter, Conductivity meter and other related analytical instruments.

<b>Paper Code and Name</b>	<b>CRAG:3.6 HYDROGEOLOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Understand the concept of Drainage basin analysis, Rain gauge and Rainfall data analysis, collection and analysis of different water samples for different purposes; prepare contour maps etc	

**CRAG. 3.6 : HYDROGEOLOGY AND VIVA**

Morphometric analysis of basins Calculation of mean areal annual Rainfall, Preparation of water table contours and their interpretation. Study of Depth and yield of bore wells. Analysis of water samples and their interpretation.

<b>Paper Code and Name</b>	<b>CTAG:3.7 GEOSTATISTICS AND COMPUTER APPLICATION IN GEOLOGY AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Understand and interpret the data using statistical approach; Further, learn to use different geological, hydrological and geophysical softwares and its interpretation.	

### **CRA. 3.7: GEOSTATISTICS AND COMPUTER APPLICATION IN GEOLOGY AND VIVA**

#### **GEOSTATISTICS**

1. Frequency distribution table and graphical representation of data
2. Measures of Central Tendency
3. Measures of Dispersion
4. Correlation studies – simple and bivariate
5. Regression Analysis
6. Principal Components Analysis (PCA)
7. Hierarchical Cluster Analysis

#### **COMPUTER APPLICATION IN GEOLOGY**

1. Executing of HYCHEM Programme- Analysis of hydrogeochemical data
2. Executing of GW\_CHART-Plotting on Piper's diagram
3. Executing of PLOCHEM – Plotting on Piper's Stiff diagrams
4. Executing of GWW (Ground Water for Windows) software
5. Calculation of Saturation Indices (SI) of mineral species using WATEQ4F programme
6. Analysis of electrical resistivity data using RESIST software
7. Analysis of electrical resistivity data using IGIS VES software
8. Analysis of electrical resistivity data using IPI2 WIN software
9. Principal Component analysis using PCA software
10. Preparation of Rose Diagram using ROZETA software – for plotting structural data related to joints and faults.

<b>Paper Code and Name</b>	<b>CTAG:4.1 MINERAL BENEFICIATION AND ENVIRONMENTAL GEOLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand the concept of Mineral processing
Unit-II	Understand the processes involved and Flowsheet of different metallic and non-metallic minerals
Unit-III	Understand the different concepts involved in Environmental Geology
Unit-IV	Understand the concepts of Volcanoes, Earthquakes and Pollution

**CTAG.4.1: MINERAL BENEFICIATION AND ENVIRONMENTAL GEOLOGY**

**UNIT I**

Principles and scope of mineral processing. Properties of ores and minerals applied to mineral beneficiation. Size reduction – Crushing, Rittinger law, Kick’s law, Bond’s theory Crushers and grinding mills. Sizing and screening. Principles of concentration processes. Gravity concentration. Jigging, Bring’s test. Operation of Wilfley Table, comparison of jigging and tabling.

**12 hrs.**

**UNIT II**

Magnetic separators primary magnet type and secondary magnet type; Flotation principles, types and functions of reagents used. Heavy media separation. Flow sheets of metallic ores; gold, copper, lead, zinc. Flow sheets of non-metallics; barite and Coal.

**12 hrs.**

**UNIT III**

Definition of Environmental Geology, Scope and objectives of environmental Geology Ecosystem, concepts of ecosystem: Energy transformation, Food chain, Stratification of biotic communities. Atmosphere: Clean air, major layers of atmosphere, Global temperature, Greenhouse effect, Greenhouse gases and their characters, Ozone depletion, CFC’s emission, Sources of Air pollution, Overview of the global warming problems, Landslides : Definition, Roles of gravity and slope, water earth quake in landslides, slides, flows and creeps, Rockslides and snow slides, Debris slides Talus and Talus creep, Mud slides, earth flows, Recognizing areas, Prone to slope instability, Ways to reduce incidence and severity of landslides Floods: Origin of streams, stream discharge, stream velocity, stream load, Flash floods, occurrence of floods, flood frequency, Urbanization and flooding, Anticipating and controlling of floods, Flood control : channelization; building levees, along streams building dams across rivers. Water quality and Pollution: Definition of pure water, water quality of different uses, Point and non point sources of pollution. Types of pollution sources, Sources

of groundwater quality deterioration. Degree and extent of pollution heavy metal pollution, Pesticide pollution. Trace metals in waste water, DO, BOD, COD, Problems of As and F in water. Restoration of groundwater.

**12 hrs.**

#### **UNIT IV**

Earth quakes: Definition, magnitude and intensity of earthquakes, Forecasting of earthquake : Animal Sense, Science of forecasting paleoquakes, Protecting from earthquakes: building construction, personal preparation, Official forecasts and public response, Earthquake hazards and Tsunamis. Volcanoes: Definition, Occurrence of volcanoes, Types of volcanoes, Forecasting eruption, volcanic hazards and benefits. Mining and Environment : Problems and issues as a result of mining industry, Geomorphological changes, Geohydrological changes, Biological changes, Cultural changes, Climatological changes, Effect air quality, Noise pollution and vibrations

<b>Paper Code and Name</b>	<b>CTAG:4.2 GEOCHEMICAL EXPLORATION AND GEOPHYSICAL EXPLORATION</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	understand the Geochemical principles and its cycle, further in turn leads to find new favourable locations of mineral deposits.
Unit-II	understand the how the chemical analysis of different geological material and flora will help find new favourable locations of mineral deposits.
Unit-III	Get acquainted with the basic principles, instrumentation and interpretation of different geophysical methods (Gravity and Magnetic) and further to find new favourable locations of mineral deposits.
Unit-IV	acquainted with the basic principles, instrumentation and interpretation of different geophysical methods (Electrical and Seismic method) and further to find new favourable locations of mineral deposits.

## **CTAG.4.2:GEOCHEMICAL EXPLORATION AND GEOPHYSICAL EXPLORATION**

### **UNIT I**

Geochemical cycle, Principles of geochemical exploration, Geochemical environment, Dispersion, Mobility of the elements and tracers, Patterns of geochemical distribution and geochemical anomalies.

**12 hrs.**

### **UNIT II**

Primary and Secondary dispersions and classifications, Geochemical soil surveys, Soil profiles in drainage sediments, Geochemical drainage survey, Biogeochemical anomalies, Biogeochemical survey techniques. Geobotanical indicators in mineral exploration.

**12 hrs.**

### **UNIT III**

Variation of gravity over the surface of the earth. Principles of gravimeters, Eotvos, Torsion balance, Thyssen and Worden gravimeters, Field procedure, various corrections applied to gravity data, Interpretation of the data in terms of slope, Shape, size and depth. Magnetic properties of the rocks, Working principles of Schmidt, Fluxgate, Proton, Precision and alkali, vapor magnetometers, Field procedure, Data reductions, Removal of regional effects, Interpretation of the data, Introduction to aero magnetic surveys,

**12 hrs.**

### **UNIT IV**

Classification of electrical methods, Resistivity method, Basic principles and various types of electrode configurations, field procedures of profiling and VES. Seismic methods - fundamental principles of wave propagation, general field procedures of reflection and refraction surveys, shooting patterns, Instruments used in seismic surveys. Radioactivity methods - principle, instruments used, interpretation of the data well logging methods.

<b>Paper Code and Name</b>	<b>CTAG:4.3 PHOTO GEOLOGY, REMOTE SENSING AND GEOGRAPHIC INFORMATION SYSTEM</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Unit-I	Understand the concept and scope of Photo Geology
Unit-II	Learn the interpretation techniques of photo interpretation
Unit-III	Understand the concept and scope of Remote sensing & different satellites
Unit-IV	Learn the physics behind concept of remote sensing data and techniques of interpretation of digitally processed image

**CTAG. 4.3: PHOTO GEOLOGY, REMOTE SENSING AND GIS PHOTO GEOLOGY****Unit I**

Definition and Scope of Photo Geology. Advantages and limitations of photo geology. Flight lines and over lap and side laps, tilt and tip, drift and crab. Scale of Photographs and its significance. Types of aerial photographs: vertical, low oblique, high oblique, black and white, colour, infra red, colour infrared (FCC), Multiband spectra (MSS), Thermal infra red, Radar imagery, Spectra zonal. Geometrical properties of vertical and oblique Photographs. Instruments for interpretation: Viewing instruments- lens and mirror stereoscopes. Measuring instruments-stereo meter, parallax bar. Plotting instruments- sketch master and stereo sketch.

**12 hrs.****Unit II**

Criteria for photo interpretation: Photographic tone, photographic texture and scale, shape and size of the objects, drainage pattern. Interpretation of Geological structures: Linear features, faults, folds, dip slopes, unconformities, dikes and sills, domal structures. Interpretation of rocks and types and land forms: Igneous rocks- Intrusive and extrusive igneous rocks. Sedimentary rocks-conglomerates, shales, sandstones, gravels, limestones. Metamorphic rocks- Gneisses, schist's.

**12 hrs.**

## REMOTE SENSING

### Unit III

Definition and Scope of Remote Sensing. History and development of Remote Sensing: Remote Sensing satellites, Evolution of Indian remote sensing satellites. Electromagnetic spectrum and its parts. Spectral reflectance properties of common earth surface features: vegetation, soil, water and rock. Radiation Laws (Thermal emission laws): Kirchhoff's law, Planck's law, Wein's law and Stefan-Boltzmann's law. Atmospheric effects and scattering, atmospheric window and atmospheric absorption scattering. Sensing Sensors: Active and Passive. Multi band cameras, multi band video cameras, opto mechanical scanners, modular multispectral scanners, land sat multispectral scanners, thermal mapper, linear imaging self scanning sensors (LISS sensors).

**12 hrs.**

### Unit IV

Earth Stations: Main reflector, servo system, feed, Low noise amplifier, down converter, tracking receiver, data demodulator, bit synchroniser. Processing of Remote sensed data: (A) Geometric corrections: Earth rotation correction, line – length correction, detector offsets, band to band offsets, altitude variation, velocity change. (B) Radiometric corrections and Atmospheric effects. Principles of Microwave remote sensing and Digital Image processing technique. Application of Remote Sensing: Spectral signature of rocks, significance of drainage analysis. Application for Lithologic discrimination: igneous, sedimentary and metamorphic rocks. Criteria for structural mapping: attitude of beds, folds, linear features, unconformities. Application for land use and land cover: land sat thematic mapper spectral bands, classification of land use and land cover systems, and classification for use with remote sensor data.

#### **PRACTICALS**

<b>Paper Code and Name</b>	<b>CRAG:4.5 MINERAL BENEFICIATION AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
Understand the working principle of Jaw crushers, ball mill, rod mill and roll crusher	

#### **CRAG. 4.5 : MINERAL BENEFICIATION AND VIVA**

Size reduction :Jaw crushers, Roll crushers, Ball mill and Rod mills. Study of reduction samples using, Roll crusher : angle of nip and ratio between size of feed and size of product, Ball and rod mills. Size analysis of ground material and their graphical representation. Study

of settling rate of solids with reference to Stoke's law and Rittinger's law using clay sample. Gravity concentration experiments using hydro cyclone. Froth flotation experiments using Denver flotation. Calculation of ratio of concentration and recovery percentages.

<b>Paper Code and Name</b>	<b>CTAG:4.6 EXPLORATION GEOPHYSICS AND VIVA</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
The students able handle the different geophysical instruments and data acquisition	

#### **CRAG. 4.6: EXPLORATION GEOPHYSICS AND VIVA**

Computation of gravity anomaly, gravity gradient and gravity curvature due to buried ore body. Case study of gravity anomalies. Computation of magnetic intensity due to buried magnetic ore bodies. Case study of magnetic anomalies. Computation of thickness / depth of beds and velocity of seismic waves by refraction and reflection methods for single and two layer horizontal discontinuity. Electrical resistivity technique – determination of resistivity and thickness of subsurface layers (VES) – Preparation of geoelectrical cross sections and their interpretation.

## **Regulations concerning Master Degree Programme**

### **Faculty of Humanities, from 2020-2021**

#### **Master Degree Programme in HINDI**

Regulations Governing the Post-Graduate Master Degree Programmes under Choice Based Credit System (KU-CBCS), framed under Section 44(1)(C) of K.S.U. Act, 2000.

#### **MASTER OF ARTS IN HINDI**

##### **Title:**

These Regulations shall be called “Karnatak University Regulations Governing Post-Graduate under the Choice Based Credit System” for Master Degree programmes.

##### **Commencement:**

These Regulations shall come into force from the academic year 2021-2022.

##### **Definitions:**

In these Regulations, unless otherwise mentioned:

- a) “University” means Karnatak University:
- b) “Post-Graduate Programmes” means Master’s Degree Courses.
- c) “Compulsory Course” means a fundamental paper which a student admitted to a particular Post-Graduate programme should successfully complete to receive the Post-Graduate Degree in the concerned subject.
- d) “Specialization Paper” means an advanced paper due to departmental choice for students wanting to receive Degree in the specialization area:
- e) “Open elective” means a course offered by Department for students of other Departments in the same Faculty. Students have freedom to choose from a number of optional courses offered by other Department/s to add to their credits required for the completion of their respective programmes: however, if in a P.G.Centre there is only one Department for the time being, the students of that Department should study that open elective course.
- f) “Credit” means the unit by which the course work is measured. For this Regulation, one Credit means one hour of teaching work or two hours of practical work per week. Normally a Semester is of 16 weeks duration in any given academic year. As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits is equal to 50 marks, 3 credits is equal to 75 marks and 4 credits is equal to 100 marks as used in conventional system.
- g) “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each subject by the candidate after completing his/her Internal Assessment and Semester end Examinations. Each course carries a prescribed number of the marks of credits. These

grades are awarded for each subject after conversion of the marks and after completion of the examinations in each semester.

- h) “Grade Point Average” of GPA refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of courses student takes and the grades awarded to him/her for each of the subjects so chosen.
- i) “Cumulative Grade Point Average” or CGPA refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown at the end of this regulation.

'A' Grade  
NAAC Accredited 2014

*Regulations and Syllabus*  
*For*  
*P.G Diploma*  
*in*  
*Reproductive Health Management*

The Karnatak University, Dharwad has always been striving to widen its horizon of academic activities by providing a base for interaction with students and faculty members of various national and overseas institutions. In this context, the Karnatak University took a landmark step to encourage foreign students to pursue their Post Graduate course, by making a special provision for their admission in 2002, by starting International Diploma in reproductive Health Management.

The Karnatak University has been in academic contact with University of Groningen, the Netherlands, since long time. When Population Research Centre (PRC) of University of Groningen extended its field research in the domains of Population Studies and Reproductive Health, it also came into contact with the JSS's Institute of Economic Research, Dharwad. This longstanding academic interaction has paved way for collaborative endeavor of these institutions to address to the current population and reproductive health issues.

In fact, the present collaboration envisages to build up an international scholarship on Reproductive and sexual health Management through a constant flow of students and faculty between the collaborating institutions.

This Diploma course provides ample opportunities for employment in various RCH, HIV/AIDS programmes and projects launched by the Government, Non-Governmental organizations and Private sectors, and also in state and National level teaching and Research Institutions.

### **Objectives of the Course:**

The course aims to train persons in the design, organization, monitoring, and evaluation of Reproductive, sexual and child health programmes in Government and Non-Government sector, thus contributing to the Reproductive, Sexual child health programmes of Government of India and reproductive health projects by NGOs, and in the final analysis to the improvement in the overall reproductive health status of the communities and Nation as a whole. The specific objectives of the courses are:

To provide a broad interdisciplinary understanding of the core areas of Reproductive health, its related aspects and also the causes and consequences of Reproductive health problems.

To develop, through a field-intense practical training, the individual ability to assess reproductive health needs of the community, to evaluate the reproductive health programmes and projects in government, private and NGO sector, to devise management strategies to achieve improved coverage and quality of services.

To impart knowledge and skills to conceptualize reproductive health research questions, design a community-based study to investigate the problem, collect relevant data from the field, analyze the data and present in a policy or scientific context.

Karnatak University, Dharwad  
P.G Diploma in Reproductive Health Management  
Program Code: DP15

**Program outcome:**

PO1: The candidate will acquire knowledge and skills to provide assistance to society in general and in particular to woman, newborn infants and their families.

PO2: Helps the society to use health care system with confidence.

PO3: The course helps its graduates to provide reproductive health care in most effective and efficient manner.

PO4: It helps its graduates to support and sustain the quality of Reproductive Health issues and services.

**Program Specific outcome:**

PSO1: The course helps its graduates to effectively assess and address clients' Reproductive Health problems, assist in decision making. Also helps managers and trainers in their efforts to improve health of mothers and new born babies at all levels of health care system.

PSO2: the graduate of this course will be able to address the basic biological mechanisms that underline male, female reproduction and that pertain to Reproductive Health issues such as contraception, infertility, sexually transmitted diseases, reproductive ageing.

PSO3: Graduates are acquainted with the concepts of Reproductive Health management.

PSO4: Graduates shall acquire counseling skills in maternal health, newborn and family planning.

**The courses offered are:**

DP15T01	4 Credits	4 Teaching hours/week	Year end exam of 100 marks
DP15T02	4 Credits	4 Teaching hours/week	Year end exam of 100 marks
DP15T03	4 Credits	4 Teaching hours/week	Year end exam of 100 marks
DP15T04	4 Credits	4 Teaching hours/week	Year end exam of 100 marks

**Course Outcomes:****DP15T01: Introduction to reproductive Health**

After studying this course, the candidates will be able to

- Address the basic biological aspects in males, females, reproduction and Reproductive Health issues such as contraception, infertility, sexually transmitted diseases, etc.
- Understand family planning methods, policy issues, quality of care, etc.

**DP15T02: Reproductive Health Risk Analysis and Management**

After completing this course, the candidate will be able to

- Overview health risks of pregnant woman, new born, predict health risks and uncertainty in human life and in particular reproductive cycle.

**DP15T03: Reproductive Health Program Management**

The candidate will learn about

- Reproductive Health program management through principles, strategies, case studies and evaluation of reproductive health policies.

**DP15T04: Reproductive Health Research Methods**

- The candidate will be prepared to take up research in Reproductive Health through research methods, research data, research hypothesis and data collection , data processing techniques.

**DP15T201A: Population Studies and Reproductive Health (OEC Paper for Second Sem)**

- By opting this course, the candidate will be able to understand and analyze population concept such as population density, age-sex composition, urbanization, age pyramids.

**DP15T301A: Epidemiology and Reproductive Health (OEC Paper for Third Sem)**

- The candidate is trained in epidemiological and public health studies, epidemiological study designs and their analysis. Also get to know the determinants of health and disease risks.

## **INTRODUCTION TO REPRODUCTIVE HEALTH**

### **Unit 1:**

The concept of Reproductive Health, Reproductive Health programs and policies in India, family planning programs, problems, approach towards Reproductive and child Health (RCH) programs.

(10 HOURS)

### **Unit 2:**

Topics of Reproductive Health: Safe motherhood-medical and socio-cultural aspects of safe pregnancies and deliveries, levels and causes of maternal mortality, use of antenatal care and policies of GOI. Child Survival-Medical and socioeconomic aspects of child morbidity and survival, levels and causes of neonatal, infant and child mortality. Reproductive System and sexuality-basic physical aspects of reproductive health, sexual response cycles in males and females, community studies on sexuality, menstruation and other reproductive health issues.

### **Unit 3:**

(10 HOURS)

Reproductive Technologies: Family planning methods and abortion- methods of contraception, abortion, child spacing and cultural perceptions about fertility and contraceptive methods. Technologies such as IVF, sonography, etc. Reproductive morbidity- Prevalence of RTI(reproductive tract infection), gynaecological diseases of woman, male reproductive illness, medical and perceived causes, policies and interventions.

(10 HOURS)

### **Unit 4:**

STDs and HIV/AIDS: medical and social aspects of STDs and HIV/AIDS, estimated levels of AIDS and interventions of GOI and NGOs. Special groups-reproductive health of special groups, policy issues and quality of care, reproductive rights and gender, male involvement, reproductive health issues of adolescents.

(10 HOURS)

### **Unit 5:**

Theories on Reproductive Health Behaviour: The process context approach towards reproductive health, individual reproductive health behaviour as an outcome of process (behavioural, biological, chance), decision making, motivation and reproductive health behaviour in institutional and cultural contexts.

(10 HOURS)

Unit 6:

Models on Reproductive Health Behaviour: Bongaarts and Potter (1983) Fertility model, Mosley and Chen(1985) mortality model, Norren and Vianen(1986) mortality model, the epidemiological transition. Theories and models are illustrated with applications in research projectson nutrition during pregnancy and birth weight of children in Karnataka, reproductive health and child spacing in rural India.

## **Reproductive Health Risk Analysis and Management**

### **Unit 1**

Introduction to Concepts in Statistics: Variable, types of variable, measurement of variables with examples. Classification, types of classification, measures of central tendency, measures dispersion skewness, kurtosis, correlation and regression. Relevance of these concepts in risk analysis.

(10 HOURS)

### **Unit 2**

Risk and Uncertainty: Risk factors that impair reproductive system, occurrence of events, risk factors associated with Reproductive health, events of interest, risks to healthy reproductive life path ( diseases, injury, genetically determined defects). Individual risks and societal (public health) risks.

(10 HOURS)

### **Unit 3**

Risk Measures and Risk Assessment: Rates, ratios, and proportions, and their inter-relationships. Measures of Risk- prevalence, incidence, point and period prevalence, relationship between point and period prevalence with examples of reproductive health. Risk measures based on relative risk, risk ratio, odds ratio-calculation, importance in health risk analysis. Comparison of risk levels in different population, prediction risks, assessment of effects of interventions.

(10 HOURS)

### **Unit 4**

Risk Assessment: Identification of risk factors and risk indicators, assignment of individuals to risk groups, segmentation of population with respect to type and level of health risks, assignment of situations to risk categories on the basis of measurable characterizations. Prediction of probability of disease impairment, health status of population. Introduction to models in epidemiology and public health research. Demographic models to predict changes in health status of population. Quantification of risk factors and risk indicators-logistic and Poisson regressions.

(10 HOURS)

## Unit 5

Risk Impact Assessment and Mangement: impact of risk factors and interventions on risk levels, models of impact assessment, measurement of differential risk levels, strategies to reduce risk, reduction of risk, management of consequences of risk-sharing the burden of risk and uncertainty, health insurance, etc.

(10 HOURS)

## Unit 6

Case Study: Risk analysis and risk measurements through health programs. A study population will be identified, health risks are determined, quantified. Using the information from sample screening, the health status of the study population will be assessed and predictions will be made for future changes.

## **Reproductive Health Program Management**

### **Unit 1**

Introduction to Management: Concept, definition, evolution. Functions qualities and aims of managers. Components of management. Skills- Technical, human, conceptual and design skills. Management-Principles, HRD system, performance appraisal, feedback and counselling, career planning and development, training and human resource information system. Theories of motivation, its contributions, noise encoding and decoding. Authority, responsibility or supervisory style. Project planning and control-PERT.

(10 HOURS)

### **Unit 2**

Reproductive Health Program Management Strategies: Strategic management approach-Service beneficiary sequence (SBS) strategy, Demand supply resource strategy, Targeting the people in need-marketing approach, client segmentation, community needs assessment, unmet need approach, health seeking behaviour.

(10 HOURS)

### **Unit 3**

Reproductive Health Program Services and Design: Commercial distribution, community based distribution systems, social marketing. Management information system, structural interventions, management training, organizational development and management assistance related to Reproductive health.

(10 HOURS)

### **Unit 4**

Case Studies of Reproductive Health Programs: Case studies from INDIA (integration of health and family planning, VIKALP, SEWA, FPAI). Integration of contraceptive services with nutrition. Adding infrastructure , training, supplies and advisory support .

(10 HOURS)

### **Unit 5**

Quality of Care in Reproductive Health Program: A management Perspective: Definition and importance of quality care. Quality care in family planning- A frame work by Judith Bruce(1990). Choice of methods, information given to clients, technical competence,

interpersonal relation, mechanism to encourage continuity, appropriate counselling services. Quality issues to be addressed in family planning program-preparation, service delivery and outcomes.

(10 HOURS)

## Unit 6

Evaluation of Reproductive Health Policies and Programs: Cost-benefit analysis in reproductive health, input –process-output evaluation. Impact evaluation. Evaluation of Programs in terms of organizational structure and management efficiency. Line command , staffing pattern, motivation to work, incentives. Time utilization analysis of various reproductive health program personnel. Use of service statistics in monitoring and evaluating reproductive health programs.

3. It improves critical thinking and analytical skills.
4. It deals with describing individual languages or describing how languages differ from each other.
5. The course aims at enhancing the analytical skills of students to conduct research, provides language related technological services and contribute important insights on issues of Law, Language Policy, Education etc.

Duration	:	One Year	
Teaching Total Hours	:	60 Hours per Paper	
Scheme of Examination	:	Essay Types Questions – 80 Marks (4 Out of 8 Questions)	
		Short Notes – 20 Marks (4 Out of 8 Questions)	
		Total :	100 Marks
		Maximum Marks :	100 Marks
Medium of Examination	:	English/Kannada	
Hours of Examination	:	Three Hours Per Paper	

**Titles of the Papers :**

Paper – 1    Language and Linguistics  
ಪತ್ರಿಕೆ – ೧    ಭಾಷೆ ಮತ್ತು ಭಾಷಾವಿಜ್ಞಾನ

Paper – 2    Historical Linguistics  
ಪತ್ರಿಕೆ – ೨    ಐತಿಹಾಸಿಕ ಭಾಷಾವಿಜ್ಞಾನ

Paper – 3 Language Teaching Methods  
ಪತ್ರಿಕೆ – ೩ ಭಾಷಾ ಬೋಧನಾ ಪದ್ಧತಿಗಳು

Paper – 4 Language and Media  
ಪತ್ರಿಕೆ – ೪ ಭಾಷೆ ಮತ್ತು ಮಾಧ್ಯಮ

## **Paper - 1 Language and Linguistics** ಪತ್ರಿಕೆ – ೧ ಭಾಷೆ ಮತ್ತು ಭಾಷಾವಿಜ್ಞಾನ

### **Course Outcome:**

1. The course helps increase our knowledge and understanding of the world.
2. Students will develop skills in analysing language to present linguistics data in various formats.
3. It exposes the students to the core areas such as phonology, morphology, syntax and semantics.
4. It also exposes the students to the interdisciplinary disciplines like socio-linguistics, psycholinguistics, anthropological linguistics, folk linguistics etc.,
5. Linguistic knowledge can be applied to improving communication between people contributing to translation activities assisting in literacy efforts and treating speech disorders.

Unit – 1 **Language** – Nature, Definitions.

ಘಟಕ – ೧ ಭಾಷೆ : ಸ್ವರೂಪ, ವ್ಯಾಖ್ಯೆಗಳು.

Unit – 2 **Language and Society.**

ಘಟಕ – ೨ ಭಾಷೆ ಮತ್ತು ಸಮಾಜ

Unit – 3 **Linguistics** – Nature and Scope.

ಘಟಕ – ೩ ಭಾಷಾವಿಜ್ಞಾನ – ಸ್ವರೂಪ ಮತ್ತು ವ್ಯಾಪ್ತಿ.

Unit – 3 **Language Variation** : Idiolect, Dialect, Style, Register, Slang, Taboo.

ಘಟಕ – ೩ ಭಾಷಾ ಪರಿವರ್ತನೆ : ವ್ಯಕ್ತಿಭಾಷೆ, ಉಪಭಾಷೆ, ಶೈಲಿ, ಭಾಷಾಪ್ರಬೇಧ, ಗ್ರಾಮ್ಯಭಾಷೆ/ಅಶಿಷ್ಟಭಾಷೆ, ನಿಷೇಧಭಾಷೆ.

Unit – 4      **Branches of Linguistics:** Descriptive, Historical, Sociolinguistics, Psycholinguistics, Applied Linguistics etc.

ಘಟಕ – ೪      ಭಾಷಾವಿಜ್ಞಾನದ ಶಾಖೆಗಳು : ವರ್ಣನಾತ್ಮಕ, ಐತಿಹಾಸಿಕ, ಸಾಮಾಜಿಕ, ಮನೋವೈಜ್ಞಾನಿಕ, ಅನ್ವಯಿಕ ಭಾಷಾವಿಜ್ಞಾನ ಮುಂ.

**Paper - 2 Historical Linguistics**

ಪತ್ರಿಕೆ – ೨      ಐತಿಹಾಸಿಕ ಭಾಷಾವಿಜ್ಞಾನ

**Course Outcome:**

1. It helps to reconstruct the pre history of language to determine their relatedness.
2. It helps to group the language into various language families.
3. The course studies history of speech communities to study the history of words i.e. Etymology.
4. The study of dilectology teaches the types of dialects, dialect boundaries, dialect Atlases etc.
5. The course also provides information in research to collection of data, informants, fieldwork, questionnaire etc.

Unit – 1      **Historical Linguistics:** Nature and Scope.

ಘಟಕ-೧      ಭಾಷೆ-ಭಾಷಾವಿಜ್ಞಾನ : ವರ್ಣನಾತ್ಮಕ –ಐತಿಹಾಸಿಕ- ತೌಲನಿಕ-ಏಕಲಾಲಿಕ-ದ್ವಿಕಾಲಿಕ

Unit – 2	<b>Types of Linguistic Change :</b> Sound Change, Phonological Change, Morphophonemic Change, Grammatical Change, Lexical Change, Semantic Change
ಘಟಕ-೨	ಭಾಷಾವೈಜ್ಞಾನಿಕ ಬದಲಾವಣೆಗಳ ವಿಧಗಳು : ಧ್ವನಿ ಬದಲಾವಣೆ, ಧ್ವನಿಮಾ ಬದಲಾವಣೆ, ಆಕೃತಿ - ಧ್ವನಿಮಾತ್ಮಕ- ಬದಲಾವಣೆ, ವ್ಯಾಕರಣಾತ್ಮಕ ಬದಲಾವಣೆ, ನಿಘಂಟಿಕ ಬದಲಾವಣೆ, ಅರ್ಥಾತ್ಮಕ ಬದಲಾವಣೆ.
Unit – 3	<b>Mechanisms of Linguistic Changes :</b> Major and Minor Mechanisms. Major Mechanisms - Borrowing, Analogical, Creation, Sound Change Minor Mechanisms - Assimilation, Dissimilation, Haplology, Metathesis, Back Formation, Recutting, Folk Etymology
ಘಟಕ-೩	ಭಾಷಾ ವೈಜ್ಞಾನಿಕ ತಂತ್ರ : ಪ್ರಮುಖ ಮತ್ತು ಗೌಣ ತಂತ್ರಗಳು ಪ್ರಮುಖ ತಂತ್ರಗಳು : ಸ್ವೀಕರಣೆ, ಅನುರೂಪಿಕ/ಸಾದೃಶ್ಯ, ಸೃಜನಾತ್ಮಕ, ಧ್ವನಿ ಬದಲಾವಣೆ. ಗೌಣ ತಂತ್ರಗಳು : ಸಮರೂಪಧಾರಣೆ ಅಸಮರೂಪಧಾರಣೆ, ಎಕ್ಸೋಚ್ಯಾರಣೆ, ಧ್ವನಿ ಪಲ್ಲಟ, ಹಿಂಪದ ರಚನೆ ಪುನರ್ವಿಚ್ಛೇದನ, ಜಾನಪದ ವೃತ್ತಿ.
Unit – 4	<b>Language Classification :</b> Genealogical, Aerial and Typological,.
ಘಟಕ-೪	ಭಾಷಾ ವರ್ಗೀಕರಣ : ಜನಾಂಗೀಯ, ವಿಭಾಗ/ಪ್ರದೇಶ ಮತ್ತು ಸ್ವರೂಪ,
Unit – 5	<b>Language Families, Reconstruction :</b> Internal, External/Comparative.
ಘಟಕ -೫	ಭಾಷಾ ಕುಟುಂಬ, ಪುನರಚನೆ : ಆಂತರಿಕ, ಬಾಹ್ಯ/ವೈದೃಶ್ಯಾತ್ಮಕ

## **Paper – 3 Language Teaching Methods**

### **ಪತ್ರಿಕೆ – ೩ ಭಾಷಾ ಬೋಧನಾ ಪದ್ಧತಿ**

### **Course Outcome:**

1. The course teaches to understand the various methods of techniques.
2. The course enhances problems solving skills.

3. It enhances creative thinking capacity.
4. The course introduces multimedia to enhance the learning experience.
5. Overall the course provides language teaching and learning strategic used by modern language teaching.

Unit – 1      **Language** : Mother Tongue, Native Language/First Language (L-1) and Foreign Language (L-2).

ಘಟಕ – ೧      ಭಾಷೆ : ಮಾತೃಭಾಷೆ, ಸ್ವಭಾಷೆ/ಪ್ರಥಮ ಭಾಷೆ ಎಲ್-೧ ಮತ್ತು ಅನ್ಯ ಭಾಷೆ ಎಲ್-೨.

Unit – 2      Language Learning and Teaching : Principles.

ಘಟಕ – ೨      ಭಾಷಾ ಕಲಿಕಾ ಮತ್ತು ಬೋಧನೆ : ತತ್ವಗಳು.

Unit – 3      **Teaching Methods** : Direct Method, Grammar Translation Method, Programmed Teaching Method, Linguistic Method, etc.

ಘಟಕ – ೩      ಬೋಧನಾ ಪದ್ಧತಿಗಳು : ನೇರ ಪದ್ಧತಿ, ವ್ಯಾಕರಣ ಅನುವಾದ ಪದ್ಧತಿ, ಯೋಜಿತ ಬೋಧನಾ ಪದ್ಧತಿ, ಭಾಷಾ ವೈಜ್ಞಾನಿಕ ಪದ್ಧತಿ, ಮುಂ.

Unit – 4      Testing Methods.

ಘಟಕ – ೪      ಭಾಷಾ ಪರೀಕ್ಷೆಗಳು.

Unit – 5      **Language Teaching Aids** : Traditional and Technological.

**Traditional** - Black Board, Flash Cards

**Technological** - Radio, T.V, Tape recorder, V.C.R, Language Lab and Computer.

ಘಟಕ – ೫      ಭಾಷಾ ಬೋಧನಾ ಸಲಕರಣೆಗಳು: ಪರಂಪರಾಗತ/ಸಾಂಪ್ರದಾಯಿಕ ಮತ್ತು ತಂತ್ರಜ್ಞಾನಿಕ.

ಪರಂಪರಾಗತ/ಸಾಂಪ್ರದಾಯಿಕ – ಕಪ್ಪುಹಲಗೆ, ಹೊಳಪು ಬಿಲ್ಲೆಗಳು

ತಂತ್ರಜ್ಞಾನಿಕ – ರೇಡಿಯೋ, ಟಿ.ವಿ., ಟೇಪ ರೆಕಾರ್ಡರ್, ವಿಸಿಆರ್, ಭಾಷಾ ಪ್ರಯೋಗಾಲಯ ಮತ್ತು ಗಣಕಯಂತ್ರ.

## Paper – 4 Language and Media

### ಪತ್ರಿಕೆ – ೪ ಭಾಷೆ ಮತ್ತು ಮಾಧ್ಯಮ

#### Course Outcome:

1. The course introduces the key concepts of language and communication system.
2. It teaches about the role of language in different domains of communication systems.
3. Students will be able to understand and apply knowledge of human communication and language processes as they occur across various controls.
4. Students will be able to develop Knowledge, skills and judgement around human communication.
5. Student will be able to communicate effectively, orally and in writing.

Unit - 1 **Introduction of key concepts in language and media :** Mass media and mass communication; Register and style.

ಘಟಕ -೧ ಭಾಷೆ ಮತ್ತು ಮಾಧ್ಯಮದ ಪ್ರಮುಖ ಪರಿಕಲ್ಪನೆಗಳ ಪರಿಚಯ: ಸಮೂಹ ಮಾಧ್ಯಮ ಮತ್ತು ಸಮೂಹ ಸಂವಹನ; ಭಾಷಾಪ್ರಬೇಧ ಮತ್ತು ಶೈಲಿ.

Unit - 2 **Development: studies in media language :** Role of language in mass media and mass communication; Speech, visuals, writing and media.

ಘಟಕ -೨ ಅಭಿವೃದ್ಧಿ: ಮಾಧ್ಯಮದ ಭಾಷೆಯ ಅಧ್ಯಯನ: ಸಮೂಹ ಮಾಧ್ಯಮ ಮತ್ತು ಸಮೂಹ ಸಂವಹನದಲ್ಲಿ ಭಾಷೆಯ ಪಾತ್ರ; ಮಾತು, ದೃಶ್ಯ, ಬರಹ ಮತ್ತು ಮಾಧ್ಯಮ.

Unit - 3 **Different styles of media language;** Schema and genre theory; Persuasion and power; Telling stories; Anchoring visual meanings; Coarseness and incivility in broadcast talk; Looking into the future; ಮಾಧ್ಯಮ ಭಾಷೆಯ ವಿವಿಧ ಶೈಲಿಗಳು ; ಸಾರಾಂಶ ಮತ್ತು ಪ್ರಕಾರ ಸಿದ್ಧಾಂತ; ಒಲಿಸುವಿಕೆ ಮತ್ತು ಶಕ್ತಿ; ಕಥೆ ಹೇಳುವುದು; ದೃಶ್ಯ ಅರ್ಥವನ್ನು ನಿರೂಪಿಸುವುದು; ಪ್ರಸಾರ ಮಾತುಕತೆಯಲ್ಲಿ ಒರಟು ಮತ್ತು ಅಸಾಮಾಜಿಕ ಭಾಷೆಯ ಉಪಯೋಗ; ಭವಿಷ್ಯದಲ್ಲಿ ಮಾಧ್ಯಮ.

ಘಟಕ -೩

Unit - 4 **Alternative Median of Mass communication :** Newspaper, Radio, Television, Film-Cinema, Folk Media, new media (internet, mobile)

ಘಟಕ - ೪ ಸಮೂಹ ಮಾಧ್ಯಮದ ಪರ್ಯಾಯ ಜಗತ್ತು: ಸಮಾಚಾರ ಪತ್ರಿಕೆ, ರೇಡಿಯೋ, ಟೆಲಿವಿಷನ್, ಚಲನಚಿತ್ರ, ಕಿರುಚಿತ್ರ, ಜಾನಪದ ಮಾಧ್ಯಮ, ನವಮಾಧ್ಯಮ (ಅಂತರ್ಜಾಲ/ಮೊಬೈಲ್).

Unit - 5 **Exploration: analyzing media language :** Types of language use in mass media e.g. news, editorials, advertising, Entertainment, internet, Messages, blog, cinema, posters, sports, political spheres; Comparing kinds of studio talk; Purposes of persuasion; Media fiction and fact ; Soundtrack and multimodal discourse; Media language and acceptability; Media change in the future.

ಘಟಕ - ೫ ಪರಿಶೋಧನೆ: ಮಾಧ್ಯಮ ಭಾಷೆಯ ವಿಶ್ಲೇಷಣೆ; ಸಮೂಹ ಮಾಧ್ಯಮದಲ್ಲಿ ಉಪಯೋಗಿಸಲ್ಪಡುವ ಭಾಷೆಯ ವಿಧಗಳು, ಉದಾ: ಸಮಾಚಾರ, ಸಂಪಾದಕೀಯ,

ಜಾಹೀರಾತು, ಮನರಂಜನೆ, ಅಂತರ್ಜಾಲ, ಸಂದೇಶಗಳು, ಬ್ಲಾಗ್, ಚಲನಚಿತ್ರ, ಭಿತ್ತಿಚಿತ್ರ, ಕ್ರೀಡೆ, ರಾಜಕೀಯ ಕ್ಷೇತ್ರ, ವಿವಿಧ ಬಗೆಯ ಸ್ಪಡಿಯೋ ಮಾತುಕತೆಯ ಹೋಲಿಕೆ, ಒಲಿಸುವಿಕೆಯ ಉದ್ದೇಶ, ಮಾಧ್ಯಮ: ಕಲ್ಪನೆ ಮತ್ತು ವಾಸ್ತವ, ಧ್ವನಿಪಥ ಮತ್ತು ಬಹುರೀತಿಯ ಮಾತುಕತೆ; ಮಾಧ್ಯಮ ಭಾಷೆ ಮತ್ತು ಒಪ್ಪಿಕೊಳ್ಳುವಿಕೆ; ಭವಿಷ್ಯದಲ್ಲಿ ಮಾಧ್ಯಮದ ಬದಲಾವಣೆ.

### **SEMESTER – I**

**(From the Academic Year 2019 – 2020 Onwards)**

## **1. Compulsory Courses**

### **PG45T101: Phonetics and Phonology**

#### **Course Outcome:**

1. The course enhances the pronunciation skill.
2. It teaches about transcriptions.
3. Students are able to develop the ability to identify and produce key sounds as well as rhythm, stress and intonation etc.
4. The course enhances the pronunciation skill.
5. Students are able to develop the ability to identify and produce key sounds as well as rhythm, stress and intonation etc.

Unit – 1	<b>Language:</b> Nature-Definition-Characteristic Features- Use.
Unit – 2	<b>Linguistics:</b> Main Branches.
Unit – 3	<b>Phonetics:</b> Branches of Phonetics.
Unit – 4	<b>Articulatory Phonetics in detail:</b> Speech Organs–Speech Sounds–Nature, Production, Classification and Transcription–IPA and Modified American Chart–Cardinal Vowels.
Unit – 5	<b>Phonology</b> –Phone, Phoneme, Allophone, Distinctive Features–Pike’s Theory of Phonemic Analysis–Basic Premises–Separating and Uniting Procedures–Segmental and Supra-segmental

Phonemes–Syllable and its Structure–Relevant Problems from  
Different Languages for Phonemic analysis.

**PG45T102: Morphology and Syntax**

**Course Outcome:**

1. Through this course students get acquainted with basic nature, branches and history of Linguistics Inquiry.
2. Students are able to comprehend to analyse and use relevant linguistic theories and work independently on problems to do with language and linguistics.
3. To learn and develop broad interdisciplinary study with various disciplines for empowering themselves to train for jobs, skills for teaching, translation and other skills.
4. To get the knowledge of various languages of world and its structures to enable them to enhance their horizons.
5. To enable students in a meaningful learning experience that prepares them to meet their goals after earning a degree.

- Unit – 1      The place of Morphology and Syntax in Linguistics. The Boundary between Morphology and Syntax.
- Unit – 2      Morph-Morpheme-Allomorph-Principles of Identification of Morphemes according to Nida-Problems to work out.
- Unit – 3      **Types of Morphemes-**  
**I Structural:** a) Additive (Roots, Affixes: Prefix, Infix, Suffix, Simulfix, Reduplicative); b) Replacive; c) Subtractive.  
**II Distributional:** a) Free and bound; b) Roots and Non-roots; c) Root and Stem; d) Nucleus and Nonnucleus; e) Nuclear and Peripheral; f) Closing and Non-closing.  
**III Other:** Zero, Empty, Portmanteau, Unique, Homophonous, Discontinuous, Morphological Processes-Addition, Deletion, Suppletion, Zero-modification etc.
- Unit – 4      **Morphological Constructions** – Inflectional, Derivational – I A, I P, W P, Models – Word – Grammatical Categories – Morphophonemics.
- Unit – 5      **I C Analysis** –Types of I Cs–Principles of determining I Cs– Syntactic Linkages: by Selection, Context–Marker, Impure Marker– Concord, Government and Cross Reference, T. G. Grammar: Basic Sentences, P-Rules, T-Rules, Optional and Obligatory Rules– Transformations.

## PG45T103: Semantics

### Course Outcome:

1. This course introduces students to the basic problems in the study of meaning in all areas language.
2. The course teaches why meaning is more complex than simply the words formed in a sentence,
3. It helps how semantic play a large part in our daily communication, understanding and language learning.
4. Students are also exposed to understand the key issues involved in the study of semantic fields.
5. Students will be able to use the appropriate analytical skills to specify the meaning of words, phrases and sentences.

Unit – 1	Place of Semantics in Linguistics, Definition and Scope.
Unit – 2	Meaning of Meaning–Earlier Semantic Studies–Structural Semantics, Descriptive Semantics, Historical Semantics–Relationship.
Unit - 3	<b>Descriptive Semantics:</b> Word–Context–Meaning Triangle of Ogden and Richards, Theories of Meaning. Structural Semantics: Paradigmatic and Syntagmatic Relations–Semantic Fields–Synonymy, Antonym and Hyponymy–Hierarchical Structure of Vocabulary. <b>Historical Semantics:</b> Historical Changes in Meaning–Types, Causes and Consequences.
Unit – 4	Lexical Semantics–Componential Analysis, Lexicology Leech’s Seven Types of Meaning, Motivation in Meaning.
Unit – 5	Modern Trends in Semantic Studies, Semantics and Translation–Semantics and Natural Language Processing.

### Bibliography:

**11.4** For the purpose of announcing the results, the aggregate of the marks secured by a candidate in all the semester examinations shall be taken into account. However, Ranks shall not be awarded in case the candidate has not successfully completed each of the semesters in first attempt or has not completed the programme in the stipulated time (vide Regulation 5) or had applied for improvement of results.

**12.0 Marks, Credit Points, Grade Points, Grades and Grade Point Average**

**12.1** The grade points and the grade letters to candidates in each course shall be awarded as follows:

Percentage of marks	Grade Points	Grade Letter
75 and above, up to 100.00 %	7.50 to 10.00	A
60 and above but less than 75 %	6.00 and above but less than 7.5	B
50 and above but less than 60 %	5.00 and above but less than 6.0	C
40 and above but less than 50 %	4.00 and above but less than 5.00	D
less than 40.00 %	Less than 4.00	F

**12.2** Credit Point (CP): The Credit Point for each course shall be calculated by multiplying the grade point obtained by the credit of the course.

**12.3** The award of Grade Point Average (GPA) for any student is based on the performance in the whole semester. The student is awarded Grade Point Average for each semester based on the Total Credit Points obtained and the total number of credits opted for. The GPA is calculated by dividing the total credit points earned by the student in all the courses by the total number of credits of those courses of the semester.

**12.4** The Cumulative Grade Point Average (CGPA) shall be calculated by dividing the total number of credit points in all the semesters by the total number of credits in all the semesters. The CGPA to date shall be calculated by dividing the total number of credit points in all the semesters to date by the total number of credits in all the semesters to date.

CGPA for the I Semester = Sum of the CP of the I Semester ÷ Sum of the credits of the I Semester

CGPA for the II Semester = Sum of the CP of the I Sem + Sum of the CP of II Sem. ÷  
Sum of the credits of the I Semester + II Semester

CGPA for the III and IV Semesters shall be computed accordingly

**12.5** The Grade Card at each semester examination shall indicate the courses opted by the student, the credit for the course chosen by the student, the credit points obtained in each course, the grade letter and the grade point average. No class shall be awarded for each semester and the same would only be awarded at the end of all the semesters based on Cumulative Grade Point Average.

**12.6** Class shall be awarded to the successful candidates based on the Cumulative Grade Point Average (CGPA) as specified below:

<b>Cumulative Grade Point Average (CGPA)</b>	<b>Class to be awarded</b>
7.5 to 10.0	First class with Distinction
6.0 and above but below 7.5	First Class
5.0 and above but below 6.0	Second Class

### **13.0 Miscellaneous:**

- A** Notwithstanding anything contained in these regulations, the semester system at Post-Graduate level is hereby repealed.
- B** The provisions of any order, Rules or Regulations in force shall be inapplicable to the extent of its inconsistency with these Regulations.
- C** The University shall issue such orders, instructions, procedures and prescribe such format as it may deem fit to implement the provisions of this Regulations.
- D** The procedural details may be given by the University from time to time.
- E** Any unforeseen problems/ difficulties may be resolved by the Vice Chancellor, whose decision in the matter shall be final.

## ಪ್ರಾಚ್ಯ ಲೇಖನ ಅಧ್ಯಯನ ಡಿಪ್ಲೊಮಾ

(೨೦೨೦-೨೧, ೨೨ ಹಾಗೂ ನಂತರದ ಅವಧಿಗಾಗಿ)

### Programme Specific Outcome:

೧. 'ಡಿಪ್ಲೊಮಾ ಇನ್ ಪ್ರಾಚ್ಯಲೇಖ ಅಧ್ಯಯನ' ಎಂಬ ಒಂದು ವರ್ಷದ ನಾನ್ ಸೆಮಿಸ್ಟರ್ ಕೋರ್ಸ್. ಇದರಲ್ಲಿ ಪತ್ರಿಕೆ-೧ ಪ್ರಾಚ್ಯಲೇಖ ಪತ್ರಿಕೆ-೨ ಹಸ್ತಪ್ರತಿಶಾಸ್ತ್ರ ಪತ್ರಿಕೆ-೩ ಶಾಸನ ಸಾಹಿತ್ಯ ಮತ್ತು ಪತ್ರಿಕೆ-೪ ದಾಖಲು ಸಾಹಿತ್ಯ ಎಂಬ ಒಟ್ಟುನಾಲ್ಕು ಪತ್ರಿಕೆಗಳಿರುತ್ತವೆ.
೨. ಪ್ರತಿಯೊಂದು ಪತ್ರಿಕೆಗೆ ೧೦೦ ಅಂಕಗಳಿದ್ದು; ಒಟ್ಟು ೪೦೦ ಅಂಕಗಳಿಗೆ ಈ ಕೋರ್ಸ್‌ನ್ನು ಅಧ್ಯಯನ ಮಾಡಬೇಕಾಗುತ್ತದೆ.
೩. ಪ್ರತಿ ಪತ್ರಿಕೆಗಳಿಗೆ ಸಂಬಂಧಿಸಿದಂತೆ ತಾತ್ವಿಕತೆಯನ್ನು ಅಧ್ಯಯನ ಮಾಡಬೇಕು.
೪. ಪ್ರಾಯೋಗಿಕವಾಗಿಯೂ ಪ್ರತಿ ವಿಷಯಗಳ ಜ್ಞಾನವನ್ನು ಪಡೆದುಕೊಳ್ಳುವುದು ಆಯಾ ಪತ್ರಿಕೆಗಳ ಉದ್ದೇಶವಾಗಿದೆ.
೫. ಎಲ್ಲ ಪತ್ರಿಕೆಗಳ ವಿಷಯ ಜ್ಞಾನದೊಂದಿಗೆ ದೊರೆತ ಆಕರ ಸಾಮಗ್ರಿಗಳನ್ನು ಸಮರ್ಪಕವಾಗಿ ಬಳಸಿಕೊಂಡು ಕನ್ನಡ ಭಾಷೆ, ಸಾಹಿತ್ಯ, ಸಂಸ್ಕೃತಿಗಳ ಹಿನ್ನೆಲೆಯಲ್ಲಿ ಚರಿತ್ರೆಯನ್ನು ಪುನರ್ ನಿರ್ಮಿಸುವ ಕಲೆಗಾರಿಕೆಯನ್ನು ಕರಗತ ಮಾಡಿಕೊಳ್ಳುವುದು ಈ ಕೋರ್ಸ್‌ನ ಗುರಿಯಾಗಿದೆ.

ಈ ಕೋರ್ಸ್‌ಗೆ ವಾರ್ಷಿಕ ಪರೀಕ್ಷೆಗಳಿದ್ದು, ಕರ್ನಾಟಕ ವಿಶ್ವವಿದ್ಯಾಲಯದ ನಿಯಮಗಳಿಗೆ ಅನುಸಾರವಾಗಿ ನಿಗದಿತ ಅವಧಿಯಲ್ಲಿ ನಡೆಯುತ್ತವೆ. ಆಯಾ ಪತ್ರಿಕೆಗಳ ಪತ್ನಿ ಪತ್ರಿಕೆ ಮಾದರಿಗಳನ್ನು ಒದಗಿಸಲಾಗುತ್ತದೆ. ಪ್ರತಿ ಪತ್ರಿಕೆ ಅಂಕಗಳ ವಿವರಗಳನ್ನು ಒಳಗೊಂಡಿರುತ್ತದೆ. ಕ.ವಿ.ವಿ. ನಿಯಮದಂತೆ ಶೇಕಡಾ ೭೫% ರಷ್ಟು ಹಾಜರಾತಿ ಕಡ್ಡಾಯವಾಗಿರುತ್ತದೆ.

## ಪತ್ರಿಕೆ-೧ ಪ್ರಾಚ್ಯಲೇಖ

### Course Outcome:

೧. ಇಂದಿನ ಯಾಂತ್ರಿಕ ಯುಗದಲ್ಲಿ ಚರಿತ್ರೆಯ ಅಧ್ಯಯನ ಕಣ್ಮರೆಯಾಗುತ್ತಿದೆ.
೨. ಸಂಸ್ಕೃತಿಯ ಅಂಶಗಳು ಗೌಣವಾಗುತ್ತಿವೆ.
೩. ಕರ್ನಾಟಕದ ಪ್ರಾಗ್ ಇತಿಹಾಸ (Pri-History) ಬಗೆಗೆ ಅಧ್ಯಯನ ಮಾಡುವುದು, ಈ ಅಧ್ಯಯನಕ್ಕೆ ಸಹಾಯಕವಾಗುವ ಆಕರ ಸಾಮಗ್ರಿ ಬಗ್ಗೆ ತಿಳಿದುಕೊಳ್ಳುವುದು.
೪. ಕಣ್ಮರೆಯಾಗಿರುವ ಇತಿಹಾಸ ಪೂರ್ವಯುಗದ ಪ್ರದೇಶ, ಊರು, ವಿಶೇಷ ಸಂಗತಿಗಳನ್ನು ಬೆಳಕಿಗೆ ತರುವುದು.
೫. ಒಟ್ಟಿನಲ್ಲಿ ಪ್ರಾಚ್ಯಲೇಖನಗಳ ಮೂಲಕ ಪ್ರಾಚ್ಯ ಸಂಗತಿಗಳನ್ನು, ಅವುಗಳ ಮಹತ್ವವನ್ನು ತಿಳಿದುಕೊಳ್ಳುವುದು ಈ ಪತ್ರಿಕೆಯ ಆಶಯವಾಗಿದೆ.

**ಘಟಕ-೧** ಪ್ರಾಚ್ಯ ಲೇಖದ ಅರ್ಥ, ಸ್ವರೂಪ, ಇತಿಹಾಸ, ಪ್ರಾಚ್ಯಲೇಖದ ಉದ್ದೇಶ, ಪ್ರಾಚ್ಯಲೇಖದ ಪ್ರಕಾರಗಳು ಮತ್ತು ಮಹತ್ವ.

**ಘಟಕ-೨** ಪ್ರಾಚ್ಯ ಲೇಖ ಅಧ್ಯಯನದ ಆಕರಗಳು: ಗುಹೆಗಳು, ಗಿಡದ ಪೊಟರೆಗಳು, ವಸ್ತುಗಳ ಅವಶೇಷಗಳು, ಆಯುಧಗಳು, ಆಹಾರ ಸಾಮಗ್ರಿಗಳು, ಉದ್ಯೋಗಗಳು, ಪ್ರಾಣಿಗಳು, ಪಕ್ಷಿಗಳು, ದಿನಬಳಕೆಯ ಸಾಮಗ್ರಿಗಳು.

**ಘಟಕ-೩** ಪ್ರಾಗ್ ಇತಿಹಾಸ ಕಾಲದ ಯುಗಗಳು

ಹಳೆ ಶಿಲಾಯುಗ

ಸೂಕ್ಷ್ಮಶಿಲಾಯುಗ

ತಾಮ್ರಶಿಲಾಯುಗ

ಕಬ್ಬಿಣದ ಯುಗ

**ಘಟಕ-೪** ಪ್ರಾಚ್ಯವಿದ್ಯಾ ಸಂಶೋಧನಾಲಯಗಳು

ಪ್ರಾಚ್ಯವಿದ್ಯಾ ಸಂಶೋಧನಾಲಯ ಮೈಸೂರು

ಕನ್ನಡ ಸಂಶೋಧನ ಸಂಸ್ಥೆ ಧಾರವಾಡ

ರಾಷ್ಟ್ರೀಯ ವಿಜ್ಞಾನ-ಇತಿಹಾಸ ಸಂಶೋಧನ ಕೇಂದ್ರ ದೆಹಲಿ

ಕರ್ನಾಟಕದ ಆಯಾ ಜಿಲ್ಲೆಗಳ ಪ್ರಾಚ್ಯ ಸಂಶೋಧನ ಕೇಂದ್ರಗಳು

**ಘಟಕ-೫** ಕರ್ನಾಟಕದ ಇತಿಹಾಸ ಪೂರ್ವಕಾಲದ ಜನವಸತಿ ಕೇಂದ್ರಗಳು

ಖ್ಯಾಡ, ಮಸ್ಕಿ, ಬ್ರಹ್ಮಗಿರಿ, ಕೊಪ್ಪ, ಹೆಗ್ಗಡೆಹಳ್ಳಿ, ಹೂನೂರು

## ಪತ್ರಿಕೆ-೨ ಹಸ್ತಪ್ರತಿಶಾಸ್ತ್ರ

### Course Outcome:

೧. ನಮ್ಮ ನಾಡಿನ ಸಾಹಿತ್ಯ ಪಾರಂಪರಿಕ ಜ್ಞಾನ ಹಸ್ತಪ್ರತಿಗಳಲ್ಲಿ ಅಡಗಿದೆ.
೨. ಈ ಹಸ್ತಪ್ರತಿಗಳು ನಮ್ಮ ನಾಡಿನ ಅಮೂಲ್ಯ ಸಂಪತ್ತು ಎನಿಸಿವೆ.
೩. ಇವುಗಳ ಆಧಾರದಿಂದ ಕನ್ನಡ ಗ್ರಂಥಗಳು ಪ್ರಕಟವಾಗಿವೆ.
೪. ಗ್ರಂಥೋದ್ಯಮ ಬೆಳವಣಿಗೆ ಹೊಂದಿದೆ.
೫. ಇಂಥ ಅಮೂಲ್ಯ ಆಕರ ಸಾಮಗ್ರಿಗಳ ಅಧ್ಯಯನ ಮಾಡುವುದು ಈ ಪತ್ರಿಕೆಯ ಉದ್ದೇಶವಾಗಿದೆ.

ಘಟಕ-೧ ಹಸ್ತಪ್ರತಿಗಳು : ಅರ್ಥ, ಸ್ವರೂಪ, ಪ್ರಕಾರಗಳು, ಪ್ರಯೋಜನಗಳು.

ಘಟಕ-೨ ಹಸ್ತಪ್ರತಿ ಲಿಪಿಕಾರರು: ವರ್ಗೀಕರಣ, ಹಸ್ತಪ್ರತಿ ಪ್ರಶಸ್ತಿಗಳು,

ಘಟಕ-೩ ಹಸ್ತಪ್ರತಿ ಸಂರಕ್ಷಣ ವಿಧಾನಗಳು,

ಸಾಂಪ್ರದಾಯಿಕ ವಿಧಾನ

ಆಧುನಿಕ ವಿಧಾನ

ಘಟಕ-೪ ಕರ್ನಾಟಕದ ಹಸ್ತಪ್ರತಿ ಸೂಚಿಗಳು :

ಮೈಸೂರು ವಿ.ವಿ. ಹಸ್ತಪ್ರತಿ ಸೂಚಿಗಳು

ಕರ್ನಾಟಕ ವಿ.ವಿ. ಹಸ್ತಪ್ರತಿ ಸೂಚಿಗಳು

ಗು.ವಿ.ಕ. ಹಸ್ತಪ್ರತಿ ಭಂಡಾರಗಳು

ಘಟಕ-೫ ಕರ್ನಾಟಕದ ಹಸ್ತಪ್ರತಿ ಭಂಡಾರಗಳು

ಕ.ವಿ.ವಿ. ಧಾರವಾಡ, ಮೈಸೂರು ವಿ.ವಿ., ಕನ್ನಡ ವಿ.ವಿ. ಹಂಪಿ, ಶ್ರವಣಬೆಳಗೊಳ, ಬೆಗಳೂರು ವಿ.ವಿ. ಮತ್ತು ಗುಲಬರ್ಗಾ ವಿಶ್ವವಿದ್ಯಾಲಯ ಹಸ್ತಪ್ರತಿ ಭಂಡಾರಗಳು.

## ಪತ್ರಿಕೆ-೨ ಶಾಸನಶಾಸ್ತ್ರ

### Course Outcome:

೧. ಕರ್ನಾಟಕದ ಶಾಸನಗಳು ಕನ್ನಡ ಸಾಹಿತ್ಯದ ಅವಿಭಾಜ್ಯ ಅಂಗವೆನಿಸಿವೆ.
೨. ಕರ್ನಾಟಕದ ಚರಿತ್ರೆ, ಸಂಸ್ಕೃತಿ ಅಧ್ಯಯನದ ಪ್ರಮುಖ ಆಕರಗಳೆನಿಸಿವೆ.
೩. ಈ ಶಾಸನಗಳನ್ನು ರಚಿಸಿದ ಕವಿಗಳು, ವಿದ್ವಾಂಸರಾಗಿದ್ದರು. ಅವರನ್ನು ಶಾಸನ ಕವಿಗಳೆಂದು ಕರೆಯುತ್ತಾರೆ.
೪. ಶಾಸನಗಳ ರಚನಾ ಬೆಳವಣಿಗೆಯು ಕುತೂಹಲಕಾರಿಯಾಗಿದೆ. ಒಂದು ನಾಡಿನ ಭಾಷೆ, ಸಾಹಿತ್ಯ, ಸಂಸ್ಕೃತಿಯ ಎಲ್ಲ ಆಯಾಮಗಳ ಅಧ್ಯಯನ ಮಾಡಲು ಸಹಾಯ ಮಾಡುತ್ತವೆ.
೫. ಈ ಹಿನ್ನೆಲೆಯಲ್ಲಿ ವಿದ್ಯಾರ್ಥಿಗಳು ಶಾಸನ ಶಾಸ್ತ್ರ ತಿಳಿದುಕೊಳ್ಳಬೇಕೆಂಬ ಉದ್ದೇಶದಿಂದ ಈ ಪತ್ರಿಕೆ ಇಡಲಾಗಿದೆ.

**ಘಟಕ-೧ ಶಾಸನ :** ಅರ್ಥ, ಸ್ವರೂಪ, ಪ್ರಾಮುಖ್ಯತೆ, ಶಾಸನಗಳ ಬರವಣಿಗೆ ವಿವಿಧ ಹಂತಗಳು, ಬರವಣಿಗೆ ಸಾಮಗ್ರಿಗಳು

**ಘಟಕ-೨ ಶಾಸನಗಳ ಸಂರಕ್ಷಣೆ:** ಶಾಸನಗಳ ಅಧ್ಯಯನ ವಿವಿಧ ನೆಲೆಗಳು

**ಘಟಕ-೩ ಶಾಸನ ಸಾಹಿತ್ಯಕ್ಕೆ ವಿವಿಧ ಅರಸುಮನೆತನಗಳ ಕೊಡುಗೆ**  
ಗಂಗರು, ಕಲ್ಯಾಣ ಚಾಲುಕ್ಯರು, ವಿಜಯನಗರ ಅರಸರು

**ಘಟಕ-೪ ಶಾಸನಗಳ ಪಡಿಯಚ್ಚು ತೆಗೆಯುವ ವಿಧಾನ, ಬಳಸುವ ಸಾಮಗ್ರಿಗಳು**

**ಘಟಕ-೫ ಕನ್ನಡ ಶಾಸನಗಳ ಪ್ರಕಾರಗಳು**

೧. ದಾನ ಶಾಸನಗಳು
೨. ವೀರಗಲ್ಲು ಶಾಸನಗಳು
೩. ಮಹಾಸತಿ ಶಾಸನಗಳು
೪. ನಿಷಧಿ ಶಾಸನಗಳು

## ಪತ್ರಿಕೆ-೪ ದಾಖಲು ಸಾಹಿತ್ಯ

### Course Outcome:

೧. ದಾಖಲೆಗಳು ಕರ್ನಾಟಕದ ಭಾಷೆ, ಚರಿತ್ರೆ, ಸಾಹಿತ್ಯ, ಸಂಸ್ಕೃತಿ ಅಧ್ಯಯನದ ಮಹತ್ವದ ದಾಖಲೆಗಳಾಗಿವೆ.

## **Regulations concerning Master Degree Programme**

### **Faculty of Social Sciences, from 2021-2022**

**Master Degree Programme in Library and Information Science (M.Lib.I.Sc.-CBCS)**  
Regulations Governing the Post-Graduate Master Degree Programmes under Choice Based Credit System (KU-CBCS), framed under Section 44(1)(C) of K.S.U. Act, 2000.

### **MASTER OF LIBRARY AND INFORMATION SCIENCE CHOICE BASED CREDIT SYSTEM (CBCS)**

#### **Title:**

These Regulations shall be called “Karnatak University Regulations Governing Post-Graduate under the Choice Based Credit System” for Master Degree programmes.

#### **Commencement:**

These Regulations shall come into force from the academic year 2021-2022.

#### **Definitions:**

In these Regulations, unless otherwise mentioned:

- a) “University” means Karnatak University:
- b) “Post-Graduate Programmes” means Master’s Degree Courses.
- c) “Compulsory Course” means a fundamental paper which a student admitted to a particular Post-Graduate programme should successfully complete to receive the Post-Graduate Degree in the concerned subject.
- d) “Specialization Paper” means an advanced paper due to departmental choice for students wanting to receive Degree in the specialization area:
- e) “Open elective” means a course offered by Department for students of other Departments in the same Faculty. Students have freedom to choose from a number of optional courses offered by other Department/s to add to their credits required for the completion of their respective programmes: however, if in a P.G. Centre there is only one Department for the time being, the students of that Department should study that open elective course.
- f) “Credit” means the unit by which the course work is measured. For this Regulation, one Credit means one hour of teaching work or two hours of practical work per week. Normally a Semester is of 16 weeks duration in any given academic year. As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits is equal to 50 marks, 3 credits is equal to 75 marks and 4 credits is equal to 100 marks as used in conventional system.
- g) “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each subject by the candidate after completing his/her Internal Assessment and Semester end Examinations. Each course carries a prescribed number of the marks of credits. These grades are awarded

for each subject after conversion of the marks and after completion of the examinations in each semester.

- h) “Grade Point Average” of GPA refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of courses student takes and the grades awarded to him/her for each of the subjects so chosen.
- i) “Cumulative Grade Point Average” or CGPA refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown at the end of this regulation.

### **Minimum Eligibility for Admission:**

The students who have successfully completed the three year/four-year Degree course or any other Degree course of this University or of any other University recognized as equivalent there to by this University shall be eligible for admission to the Post Graduate Programmes under the KU-CBCS Programme provided they also satisfy the eligibility conditions like percentage of marks etc., as may be prescribed by the University and as per Ordinance of the course.

### **Entrance Test**

Candidate seeking admission to the course shall be required to appear for entrance test conducted by the University, for the 1<sup>st</sup> Semester.

### **Selection for Admission**

The selection of students shall be made on merit in each category of reservations as per the University rules for 1<sup>st</sup> Semester.

### **Intake**

The total number of candidates to be admitted to the course would be 30 only for the 1<sup>st</sup> semester. Two seats are allocated to other University candidates of which one for other University within the state and one for Outside state. Eight seats are under enhanced fee. Total Seats is 30.

### **Course of Study:**

The courses of study for M.Lib.I.Sc degree shall comprise of Theory and Practicals as noted in the syllabus.

**Note: Specification of Degrees as per UGC notification dated March 2014 published in the Gazette of India, 5<sup>th</sup> July 2014 (Part III Section 4).**

### **Duration of the Programme:**

The programme of study for the Post-Graduate Master Degree shall normally extend over a period of two academic years, each academic year comprising of two semesters, and each semester comprising of sixteen weeks of class work.

## **Medium of Instruction**

The medium of instruction and examination is English.

## **Minimum Credits and Maximum Credits:**

- a) There shall be three categories of courses viz., Compulsory course, Specialization Course and Open Elective Course. Compulsory and Specialization Course should be from the concerned department only. The Open Elective are the courses offered by other Departments in the same Faculty.
- b) Each course shall have a definite course objective, Eligibility criterion for taking the course, scheme of Evaluation including the components of Internal Assessment (IA) marks, Projects (if any), the number of contact hours, type of practical and the prescribed credits.
- c) The credits for each of compulsory course may vary from 3 to 4 credits; for specialization course it may vary from 1 to 4. In case of Open Elective Course, it shall be 1 to 3 credits for each paper.
- d) A student shall register for minimum of 18 credits and a maximum of 30 credits per semester. However, to qualify for the degree in any Department under any school and faculty, he/she should have registered and cleared a minimum number of credits, which vary from course to course.

## **Course Structure:**

- a) The students of Post-Graduate Programme shall study the courses as may be approved and prescribed by the Academic Council of the University from time to time.
- b) A typical Master Degree program consists of a number of courses. This number varies from discipline to discipline. The term course is used to indicate a logical part of a subject matter of the programme (also referred to as paper). In essence the courses are of three types:
  - i. Compulsory Course
  - ii. Specialization Course or Optional Course and
  - iii. Open Elective Course.
- c) Each programme shall have a set of compulsory course that a student must complete to get the degree in the concerned Department. These are distributed in each semester. There could be a minimum of such papers for each semester depending on the department.
- d) The students shall also choose a minimum number of specializations Course offered within the department. Each department will offer at least one specialization paper in the third and fourth semester. The Department, BOS and the Faculty may also have spell out the number of such specialization courses a student will have to take for the specialization. The Department offering of specialization course shall provide the flexibility in the system so that the student can opt for a variety of programmes depending upon their interest.
- e) Each department shall offer at least two Open Elective courses for the II and III Semester for students from other department. Student from the same department are generally not allowed to opt the courses offered as Open Elective course in the same department.

- f) Each course (paper) in this system is designed carefully to include lectures / tutorial/ Laboratory work/ seminars/ Project work/ practical training/ report writing/ Viva-voce etc., to meet effective teaching and learning needs and the credits are assigned suitably.
- g) Master Degree Programmes are essentially semester system Programmes. There shall be 4 semesters in each Programme. There shall be two semesters for each year of the Programme. Each of the Semester will be of 16 weeks duration including evaluation and grade finalization period. The academic session in each semester will provide 90 teaching days with 48 hrs of teaching / learning periods in six days session per week.
- h) The normal calendar for the semester would be as follows:
  - i. I and III semester - August to November
  - ii. II and IV Semester - January to April

### Attendance

- a. Each paper shall be taken as a unit for the purpose of calculating the attendance.
- b. Each student will have to sign and mark his attendance for every hour of teaching of each paper. At the end of every month all teachers shall notify the attendance of every student on the Notice Board of the department during 2<sup>nd</sup> week of every month. Chairman shall certify the fulfilment of required attendance of every candidate in the Examination form.
- c. Certain proportion of the marks in Internal Assessment shall be awarded based on attendance as an incentive to the student for regularity in attendance.
- d. A student shall be considered to have satisfied the requirement of attendance for each paper, if he/she has to attend not less-than 75% of the number of classes held up to the end of the semester including tests, seminars, group discussions, practical, tutorials, etc.
- e. However, if a student represents his/her institution, University, State or Nation in sports, NCC, NSS of Cultural of any other officially sponsored activities, he/she shall be eligible to claim the attendance for the actual number of days participated subject to a maximum of 20 days in a semester based on the specific recommendation of the head of the Department.

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Identify the Specific Subject of the Document by analysing the contents.
CO 2	Devise call numbers of the documents by constructing class numbers and book numbers
CO 3	Understand the logic of mapping of subjects.
CO 4	Impart Practical training to the students in cataloguing various types of documents according to the AACR-2
CO 5	Catalogue the works with Pseudonymous authors, Works with Uniform Titles and Serials Publications.

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 64)</b>
<b>Classification</b>	
- Classification of documents by identifying Specific Subject, identification of documents representing simple, compound and complex subjects.	12 Hours
- Structure of DDC, Introduction to 23rd edition of DDC, Use of Standard subdivisions (table 1) and use of table 2 to 6 in DDC	12 Hours
- Assigning Book Numbers and introduction to Web Dewey	8 Hours
<b>Cataloguing</b>	
- Cataloguing of printed monographs- Single personal Authorship shared Responsibility	10 Hours
	8 Hours

- Cataloguing of works under editorial direction Cataloguing of Multi-volume and multi-part documents.	
- Cataloguing of works under Pseudonymous authors – and Works with Uniform Titles and Serials Publications.	8 Hours
- Cataloguing of works authored by various types of corporate bodies: Government publications, Institutional publications, Society publications, Conference/Seminar proceedings, Workshop materials etc.	6 Hours

## **9.0 Examination**

- 9.1.** There shall be an examination at the end of each semester. The odd semester examinations shall be conducted by the respective Departments/ P.G.Centres/ Colleges. The even semester examinations shall be conducted by the University.
- 9.1.1** There shall be semester-end examination of 3 hours duration for 75 marks; 2 hours for 50 marks, 1.5 hours for 35 marks and 1 hour for 25 marks course.
- 9.1.2** Every student shall register for each semester-end examination as per the University Notification by submitting duly completed application form through the proper channel and shall also pay the fees prescribed.
- 9.1.3** The Office of the Registrar (Evaluation) shall allot the Register Number to the candidate at the 1st semester-end examination. That will be the Register Number of the candidate for all subsequent appearances and semester-end examinations.
- 9.1.4** The Answer scripts shall be in the safe custody of the University for a period of six months from the date of announcement of results. These shall be disposed off after six months.
- 9.1.5** The programme under CBCS is a fully carry-over system. A candidate reappearing for either the odd or even semester examinations shall be permitted to take examinations as and when they are conducted (even semester examination in even semester and odd semester examination in odd semester).
- 9.1.6** Candidates who have failed, remained absent or opted for improvement in any course/ courses shall appear for such course/ courses in the two immediate successive examinations that are conducted. However, in the case of the candidates appearing for improvement of their marks, the marks secured in the previous examination shall be retained, if the same is higher.
- 9.1.7** Candidates who desire to challenge the marks awarded to them, in the even semester-end examinations, may do so by submitting an application along with the prescribed

fee to the Registrar (Evaluation) within 15 days from the announcement of results.

## **9.2 Odd Semester Examination**

- 9.2.1** There shall be a Board of Examiners to set, scrutinise and approve question papers.
- 9.2.2** The BOE shall scrutinise the question papers submitted in two sets by the paper setters and submit the same to the office of the Registrar (Evaluation).
- 9.2.3** The office of the Registrar Evaluation shall dispatch the question papers to the Departments/ P.G.Centres/ Colleges who shall conduct the Examinations according to the Schedule announced by the University.
- 9.2.4** The Chairperson of the Department/ Administrator of the P.G.Centre/ Principal of the College shall appoint one of their full time course teachers as Post Graduate Programme (PGP) Coordinator who shall conduct the examinations and arrange for evaluation of answer scripts.
- 9.2.5** Answer scripts shall be valued by the examiners appointed by the University. However, in those centers where an examiner for a particular course is not available, then the answer scripts of that course shall be dispatched to the office of the Registrar (Evaluation) who shall arrange for valuation of the same.
- 9.2.6** There shall be single valuation. The examiner (Internal or External) shall value the answer scripts and shall indicate the marks awarded to each question on the answer script.
- 9.2.7** The Marks List, a copy of the Examination Attendance Sheet and the sealed bundles of the answer scripts shall be dispatched by the PGP Coordinator to the Registrar's (Evaluation) Office at the conclusion of the valuation at the respective centres.
- 9.2.8** The Office of the Registrar Evaluation shall process and announce the results.

## **9.3 Even Semester**

- 9.3.1** There shall be a Board of Examiners to set, scrutinize and approve question papers.
- 9.3.2** As far as practicable, it will be ensured that 50% of the paper setters and examiners are from other Universities/ Research Institutes.
- 9.3.3** Each answer script of the semester-end examination (theory and project report/dissertation/practical) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be the average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks, such a script shall be assessed by a third examiner. The marks allotted by the third examiner shall be averaged with nearer award of the two evaluations.

Provided that in case the number of answer scripts to be referred to the third examiner in a course exceeds minimum of 5 or 20% of the total number of scripts, at

the even semester-end examinations, such answer scripts shall be valued by the Board of Examiners on the date to be notified by the Chairperson of the Board of Examiners and the marks awarded by the Board shall be final.

- 9.3.4** Wherever dissertation/ project work is prescribed in the even semesters of a programme, the same shall be evaluated by both internal and external examiners. The evaluation shall be as prescribed by the concerned Board of Studies.
- 9.3.5** In case of programmes with oral examination, details of maximum marks, credits or duration may vary from Department to Department as specified by the concerned Board of Studies.

#### **9.4. Evaluation**

- 9.4.1** Each Course shall have two evaluation components - Internal Assessment (IA) and the Semester End Exams.
- 9.4.2** The IA component in a course shall carry 25/25/15 marks and the Semester End Examination shall carry 75/50/35 marks respectively, as the case may be. Courses having 25 marks and 15 marks as IA component shall have a maximum of 3 marks allotted for attendance. - 12.2** Credit Point (CP): The Credit Point for each course shall be calculated by multiplying the grade point obtained by the credit of the course.

- 12.3** The award of Grade Point Average (GPA) for any student is based on the performance in the whole semester. The student is awarded Grade Point Average for each semester based on the Total Credit Points obtained and the total number of credits opted for. The GPA is calculated by dividing the total credit points earned by the student in all the courses by the total number of credits of those courses of the semester.

- 12.4** The Cumulative Grade Point Average (CGPA) shall be calculated by dividing the total number of credit points in all the semesters by the total number of credits in all the semesters. The CGPA to date shall be calculated by dividing the total number of credit points in all the semesters to date by the total number of credits in all the semesters to date.

CGPA for the I Semester = Sum of the CP of the I Semester ÷ Sum of the credits of the I Semester

CGPA for the II Semester = Sum of the CP of the I Sem + Sum of the CP of II Sem. ÷  
Sum of the credits of the I Semester + II Semester

CGPA for the III and IV Semesters shall be computed accordingly

- 12.5** The Grade Card at each semester examination shall indicate the courses opted by the student, the credit for the course chosen by the student, the credit points obtained in each course, the grade letter and the grade point average. No class shall be awarded for each semester and the same would only be awarded at the end of all the semesters based on Cumulative Grade Point Average.

- 12.6** Class shall be awarded to the successful candidates based on the Cumulative Grade Point Average (CGPA) as specified below:

Cumulative Grade Point Average (CGPA)	Class to be awarded
7.5 to 10.0	First class with Distinction
6.0 and above but below 7.5	First Class

- n. **“University”** means Karnatak University, Dharwad.

#### **4.0 Minimum Eligibility for Admission**

A candidate, who has successfully completed Bachelor’s Degree programme in Science or any other Degree programme of this University or of any other University recognized as equivalent thereto by this University, shall be eligible for admission to the Post Graduate Programmes in science provided the candidate also satisfies the conditions like the minimum percentage of marks and other eligibility conditions as prescribed by the University from time to time. Admissions shall be as per Government of Karnatak reservation policy and the directions issued in this regard from time to time.

#### **5.0 Durations of the Programme**

The Durations of the study for the Post-Graduate programme shall extended over a period of two (three in case of MCA) consecutive academic years, each academic year comprising two semesters, and each semester comprising sixteen weeks with a minimum of ninety working days. However, the students, who discontinue the programme after one or more semesters due to extraordinary circumstances, are allowed and complete the programme with due approval from the Registrar. Candidate shall not register for any other regular course other than Diploma and Certificate courses being offered on the campus during the durations of P.G. Programme.

#### **6.0 Medium of Instruction and Evaluation**

The medium of instruction shall be English. However, the students may write the examinations in Kannada if so provided by the concerned Board of Studies.

#### **7.0 Programme Structure**

**7.1** The students of Post-Graduate programme shall study the courses as may be approved by the concerned Board of Studies. Faculty and the Academic Council of the University from time to time subject to minimum and maximum credits as outlined in these regulations.

**7.2** There shall be three categories of courses namely, Compulsory Courses, Specialization courses and Open Elective Courses.

**7.3** Each programme shall have a set of Compulsory Courses, as stipulated in the regulations governing the concerned programme that a student must complete to get the concerned degree.

**7.4** In those programmes that offer specialization courses, the students shall choose the prescribed number of Specialization Courses offered within the Department.

**7.5** Each Department shall offer Open Elective courses for students of other Departments. The students of a Department shall choose Open Elective courses from among those prescribed by the University and selected by the Department from time to time. P.G. Centres and affiliated colleges can offer those Open Electives Courses which are approved of prescribed by their Parent Department of the University. Such Open Elective courses shall be taught by qualified teachers approved by the University.

**7.6** The credits for each of the Compulsory Courses may vary from 2 to 4: for Specialization Course, from 2 to 4 and for Open Elective Course, from 2 to 4, wherever project work/field work/practical are involved in the course, the credits may extend to 6 or as otherwise provided by concerned programme.

**7.7** The minimum credits for P.G. Programme shall be 92. In the case of MCA, the minimum number of credits shall be 158 and in case of M.Sc. Computer Science the minimum credits are 116.

**7.8** The students shall undertake project/field work during the programme as compulsory course or in lieu of Specialization Course or Open Elective Course if so specified by concerned Board of Studies.

**7.9** The ratio between Compulsory, Specialization and Open Elective may differ from department to department

**7.10** The detailed programme structure for Faculty of Science & Technology shall be as prescribed and shown in Annexure-I, Annexure-Ia & Annexure-Ib

**7.11** The Open Elective Courses generally will have practical component, unless otherwise specified by the respective Board of Studies. The number of students admitted to the course shall commensurate with the availability of infrastructure.

## **8.0 Attendance**

**8.1** Each course shall be taken as a unit for the purpose of calculating the attendance.

**8.2** Each student shall sign the attendance register maintained by the Department for each course for every hour/unit of teaching /practical. The course teachers shall submit the monthly

attendance report to the Chairperson of the Department who shall notify the same on the notice board of the Department during the second week of the subsequent month.

**8.3** Marks shall be awarded to the student for attendance as specified in the regulations concerning evaluation.

**8.4** A student shall be considered to have satisfied the required attendance for each course if he/she has attended not less than 75% of the total number of instructional hours during the semester.

**8.5** There is no provision for condoning shortage of attendance.

**8.6** The students who do not satisfy the prescribed requirement of attendance shall not be eligible for the ensuing examination. Such candidates may seek admission a fresh to the given semester.

**8.7** Such of the candidates who have participated in State/National level Sports, NSS, NCC, Cultural activities and other related activities as stipulated under the existing regulations shall be considered for giving attendance for actual number of days utilized in such activities (including travel days) subject to the production of certificates from the relevant authorities within two weeks after the event.

## **9.0 Examination**

**9.1** There shall be an examination at the end of the each semester. The odd semester examinations shall be conducted by the respective Departments/P.G. Centres/Colleges. The even semester examinations shall be conducted by the University.

**9.1.1** Unless otherwise provided, there shall be semester-end examination of 3 hours duration for 75/100 marks; 1.5 hours for 50 marks and 2/4 hours for 35/75 marks for practical examination.

**9.1.2** Every student shall register for each semester-end examinations as per the University Notification by submitting duly completed application form through the proper channel and shall also pay the fees prescribed.

**9.1.3** The Office of the Registrar (Evaluation) shall allot the Register Number to the candidate at 1st semester-end examination. That will be the Register Number of the candidate for all subsequent appearances at semester-end examinations.

**9.1.4** The Answer scripts shall be in the safe custody of the University for a maximum period of six months from the date of announcement of results. These shall be disposed off after six months.

**9.1.5** The programme under CBCS is a fully carry-over system. A candidate reappearing for either the odd or even semester examinations shall be permitted to take examinations as and when they are conducted (even semester examination in even semester and odd semester examination in odd semester).

**9.1.6** Candidates who have failed, remained absent or opted for improvement in any course/ courses shall appear for such course/courses in the two immediate successive examinations that are conducted. However, in the case of the candidates appearing for improvement of their marks, the marks secured in the previous examination shall be retained, if the same is higher.

**9.1.7** Candidates who desire to challenge the marks awarded to them, in the even semester-end examinations, may do so by submitting an application along with the prescribed fee to the Registrar (Evaluation) within 15 days from the announcement of results.

## **9.2 Odd Semester Examination**

**9.2.1** There shall be a Board of Examiners to set, scrutinize and approve question papers.

**9.2.2** The BOE shall scrutinize the question papers submitted in two sets by the paper setters and submit the same to the office of the Registrar (Evaluation)

**9.2.3** The office of the Registrar Evaluation shall dispatch the question papers to the Departments/P.G. Centers/Colleges who shall conduct the Examinations according to the Schedule announced by the University.

**9.2.4** The Chairperson of the Department/Administrator of the P.G. Centre/Principal of the College shall appoint one of their full time course teachers as Post Graduate Programme (PGP) Coordinator who shall conduct the examinations and arrange for evaluation of answer scripts.

**9.2.5** Answer scripts shall be valued by the examiners appointed by the University. However, in those centers where an examiner for a particular course is not available, then the answer scripts of that course shall be dispatched to the office of the Registrar (Evaluation) who shall arrange for valuation of the same.

**9.2.6** There shall be single valuation. The examiners (Internal or External) shall value the answer scripts and shall indicate the marks awarded to each question on the answer script.

**9.2.7** The Marks List, a copy of the Examination Attendance Sheet and the sealed bundles of the answer scripts shall be dispatched by PGP Coordinator to the Registrar (Evaluation)’s Office at the conclusion of the valuation at the respective centers.

**9.2.8** The Office of the Registrar Evaluation shall process and announce the results.

## **9.3 Even Semester Examination**

**9.3.1** There shall be a Board of Examiners to set, scrutinize and approve question papers.

**9.3.2** As far as practicable, it will be ensured that 50% of the paper setters and examiners are from other Universities/Research Institutes.

**9.3.3** Each answer script of the semester-end examination (theory and project report) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks, such a script shall be assessed by a third examiner. The marks allotted by the third examiner shall be averages with nearer award of the two evaluations.

Provided that in case of the number of answer scripts to referred to the third examiner in a course exceeds of 5 or 20% of the total number of scripts, at the even semester-end examinations, such answer scripts shall be valued by the Board of Examiners on the date to be notified by the Chairperson of the Board of Examiners and the marks awarded by the Board shall be final.

**9.3.4** Wherever dissertation/project work is prescribed in the even semesters of a programme, the same shall be evaluated by both internal and external examiners. The evaluation shall be as prescribed by the concerned Board of Studies.

**9.3.5** In Case of programmes with practical examination details of maximum marks, credits or duration may vary from Department to Department as specified by the concerned Board of Studies.

## **9.4 Evaluation**

**9.4.1** Each Course shall have two evaluation components- Internal Assessment (IA) and the Semester End Exams.

**9.4.2** The IA Component in a course shall carry 25% / 30% /50% and the Semester End Examination shall carry 75% /70% /50% respectively, as the case may be. Courses having 25% & 30% / 50% marks as internal assessment shall have 3 / 5 marks allotted to attendance. However, in case of project work, the distribution of marks for Internal Assessment and Examination shall be left to the discretion of the concerned BOS.

**9.4.3** Marks for attendance shall be awarded to the students according to the following table.

For courses carrying 25% of marks for IA, the attendance marks shall be

<b>Attendance (in percentage)</b>	<b>Marks</b>
Above 90	3
Above 80 and up to 90	2
Above 75 and up to 80	1

**9.4.4** Internal Assessment (IA) shall be based on written tests, practical and seminars. However, the number of IA components per course per semester shall not be less than two.

**9.4.5** The IA marks list shall be notified on the Department Notice Board as and when the individual IA components are completed and the consolidated list shall be submitted to the

Office of the Registrar Evaluation before the commencement of semester-end examination, or as directed by the University.

**9.4.6** The tests shall be written in a separately designated book supplied by the University which shall be open for inspection by the students after evaluation.

**9.4.7** There is no provision for seeking improvement of Internal Assessment marks.

**9.4.8** The IA records, pertaining to Semester Examination, shall be preserved by the Department/Centers/Colleges for a period of one year from the date of semester examination. These records may be called by the University or body constituted by the University as and when deemed necessary.

**9.4.9** The dissertation /project work viva-voce shall be conducted by an internal and external examiner.

## **10.0 Maximum duration for completion of the Programme**

**10.1** A candidate admitted to a post graduate programme shall complete it within a period which is double the duration of the programme from the date of admission.

**10.2** Whenever the syllabus is revised, the candidate reappearing shall be allowed for the examinations only according to the new syllabus.

## **11.0 Declaration of Results**

**11.1** The minimum for a pass in each course shall be 40% of the total marks including both IA and the semester-end examinations. Further, the candidate shall obtain at least 40% of the marks in the semester-end examination. There is no minimum for the IA marks.

**11.2** Candidates shall secure a minimum of 50% in aggregate in all courses of a programme in each semester to successfully complete the programme.

**11.3** Candidates shall earn the prescribed number of credits for the programme to qualify for the PG Degree.

**11.4** For the purpose of announcing the results, the aggregate of the marks secured by a candidate in all the semester examinations shall be taken into account. However, Ranks shall not be awarded in case of the candidate has not successfully completed each of the semesters in first attempt or has not completed the programme in stipulated time (vide Regulation 5) or had applied for improvement of results.

## **12.0 Marks, Credit Points, Grade points, Grades and Grade Point Average**

**12.1** The grade points and the grade letters to candidates in each course shall be awarded as follows:

Percentage of marks	Grade points	Grade Letter
75 and above, up to 100.00 %	7.50 to 10.00	A
60 and above but less than 75%	6.00 and above but less than 07.5	B
50 and above but less than 60%	5.00 and above but less than 6.0	C
40 and above but less than 50%	4.00 and above but less than 5.00	D
Less than 40%	Less than 4.00	F

**12.2 Credit Point (CP):** The Credit Point for each course shall be calculated by multiplying the grade obtained by the credit of the course.

**12.3** The award of Grade Point Average (GPA) for any student is based on the performance in the whole semester. The student is awarded Grade Point Average for each semester based on the Total Credit Points obtained and the total number of credits opted for. The GPA is calculated by dividing the total credit points earned by the student in all the courses by the total number of credits of those courses of the semester.

**12.4** The Cumulative Grade Point Average (CGPA) shall be calculated by dividing the total number of credit points in all the semesters by the total number of credits in all the semesters. The CGPA to date shall calculated by dividing the total number of credit points in all the semesters to date by the total number of credits in all the semesters to date.

CGPA for the I Semester= Sum of the CP of the I Semester+Sum of the credits of the I Semester

CGPA for the II Semester= Sum of the CP of the Sem +Sum of the CP of II Sem +Sum of the Credits of the I Semester+II Semester

CGPA for the III and IV Semester shall be computed accordingly.

**12.5** The Grade Card at each semester examination shall indicate the courses opted by the student, the credit for the course chosen by the student, the credit points obtained in each course, the grade letter and the grade point average. No. class shall be awarded for each semester and the same would only be awarded at the end of all the semesters based on Cumulative Grade point Average.

**12.6** Class shall be awarded to the successful candidates based on the Cumulative Grade Point Average (CGPA) as specified below.

Cumulative Grade Point Average (CGPA)	Class to be awarded
7.5 to 10.0	First Class with Distinction
6.0 and above but below 7.5	First Class
5.0 and above but below 6.0	Second Class

### **13. Miscellaneous:**

**a)** Notwithstanding anything contained in these regulations, the semester system at Post-Graduate level is hereby repeated.

- b)** The provisions of any order, Rules or Regulations in force shall be inapplicable to the extent of its inconsistency with these Regulations.
- c)** The University shall issue such order, instructions, procedures and prescribe such format as it may deem fit to implement the provisions of this Regulations.
- d)** The procedural details may be given by the University from time to time.
- e)** Any unforeseen problems/difficulties may be resolved by the Vice Chancellor, whose decision in the matter shall be final.

### Annexure-I

The Programme structure of the Master of Science Degree shall be as follows:

Semester	No. of compulsory & Specialization courses (credits/course)	Total credits for compulsory & Specialization courses	No. of open elective course (credits/course)	Total credits of open elective course	Total credits for the semester

The Post Graduate Department of Studies and Research in Marine Biology was established in Karwar Post Graduate Centre of the Karnatak University in the year 1975. The department is known for its academic excellence and extension activities (through FGB- Fishermen Guidance Bureau) in coastal regions. The Department is supported by coordinated grants from UGC, DBT, DST, BRNS, MoEF, MoES and INCOIS.

The Department offers three courses in Marine Biology viz. M.Sc., M.Phil. and Ph.D.

The Department also offers skill development course under National Skill Qualification Framework (NSQF) supported by Agriculture Skill Council of India (ASCI).

### **M.Sc. Programme in Marine Biology under Choice Based Credit System (CBCS) w.e.f. 2017-2018.**

**1.1 Duration:** Two years with four semesters, each of 16 week duration.

**1.2 Eligibility for admission:** B.Sc. graduates in life science subjects from Karnatak University or any other recognized Universities with 45% aggregate marks are eligible for admission to M.Sc. Marine Biology course. Relaxation is for SC/ST/Cat-I students as per University norms.

**1.3 Intake:** 30 students for the first semester that includes seats under enhanced fee. Other rules for admission for intake of students may change from time to time as per university notification.

**2. Attendance:** Every student must have at least 75% attendance in each semester for eligibility to appear for semester and examination.

**3. Medium of instruction:** the medium of instruction shall be English.

**4. Course Structure:** The student desirous for a M.Sc. degree in Marine Biology shall complete 92 credits, 84 credits in Marine biology and 8 credits in other subjects. Department also offers 4 credits each for elective papers in II and III semester for students from other subjects. Given below are the details about credits for each paper/practical/dissertation work and number of teaching hours for the four semesters along with marks allocation for students offering M.Sc. Marine Biology or Elective paper in Marine Biology.

**SEMESTER I:**  
***Compulsory Papers***

**Total Credits: 58 (Theory +Dissertation)+26 (Practical)+8(OEC)=92**

**Note:** 1. There Shall be 25 Marks as internal assessment (IA) for each theory paper and 10 marks as IA for each Practical.  
2. There shall be 75 marks for each theory paper and 40 marks for each practical final examination at the end of each semester.  
3. The Dissertation work carries 150 marks (IA-25 marks; Dissertation -75 marks; Viva-Voce-50marks)

**Scheme of Examinations:**

- i) The examination will be conducted at the end of the each semester
- ii) Each theory course will be have a question paper of 3 hours of duration and maximum marks of 75. Each practical course will have examination of 4 hours duration and maximum marks of 40

## **QUESTION PAPER PATTERN:**

### **A) THEORY**

There shall be a total of 15 questions. In section I, out of 4 questions any 2 questions to be answered, each question carrying 15 marks. In section II, out of 5 questions any 3 questions to be answered, each question carrying 10 marks. In section III, out of 5 questions answer any 3 questions each carrying 15 marks.

### **B) PRACTICALS**

The marks allotted for practical is 50, out of which 10 is for internal and 40 is for semester final.

### **C) PROJECT EVALUATION:**

1. Internal assessment	: 25 marks
2. Evaluation of dissertation	: 75 marks
3. Viva-voce	: 50 marks
Total	:150 marks

### **Award of Gold medals:**

The following gold medals will be awarded to the students for standing highest at the M.Sc. Marine Biology Examination.

- Late. Shri Gurulingappa HakkaPakki Gold Medal.

### **Co-curricular Activities:**

Seminars, assignments and group discussions will be conducted periodically. Field visits, cruise, study tours and Institutional/industrial visits are conducted. However, these activities do not carry any marks.

### **PROGRAMME SPECIFIC OUTCOMES (PSOS)**

By completing Post graduation course in Marine Biology, students are expected to have achieved the following knowledge, skills and capabilities.

- This programme offers a global platform to involve in academic, research and entrepreneurship capacities through knowledge intensive, innovative thinking, problem solving skills.
- The programme provides understanding of basic and advanced concept of theoretical and practical skills in building the sustainability.
- The course provides independent project/dissertation research, develops computational, analysis and interpretation skills by evaluating qualitative and quantitative data and one can be independent researcher.
- This course provides greater platform for competitive and qualification exams such as UGC-NET, CSIR NET in Life science and Earth science, ICAR, SET, GATE, GRE, as well administrative and academic peers.

<b>Paper Code and Name</b>	<b>Paper: MBCT 1.1. Biosystematics &amp; Biology of Non-Chordates</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper :	
CO 1	Students will learn the Animal kingdom classification and basics of taxonomy of non-chordates.
CO 2	Students will understand how morphological change due to change in environment helps drive evolution over a long period of time.

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I: Principles of taxonomy</b> Scope of taxonomy. Species concept, Theories of biological classification, Taxonomic hierarchy. Central theme of International Code of Zoological Nomenclature. Modern trends in taxonomy.	<b>8hrs.</b>
<b>Unit II: General classification of non-chordata.</b> Classification upto order and systematic position of - Protozoa, Porifera, Cnideria, Platyhelminthes, Annelida, Arthropoda, Mollusca and Echinodermata.	<b>10hrs.</b>
<b>Unit III: Minor phyla.</b> General organization and systematic position of minor phyla - Ctenophora, Nemertinea, Chaetognatha, Entoprocta, Rotifera, Kinorhyncha, Phoronida, Brachiopoda.	<b>10hrs.</b>
<b>Unit IV: Morphology, locomotion, feeding and digestion among invertebrates</b> Structural modifications and adaptations for locomotion, food and feeding. Structural variations in digestive system.	<b>6hrs.</b>
<b>Unit V: Respirations, circulation and excretions among invertebrates</b> Structure involved in respiration, respiratory pigments. Evolution of respiratory strategies. Role of body fluid. Types of circulations. Circulatory mechanism. Excretory organs and excretion.	<b>8hrs.</b>
<b>Unit VI: Nervous system, sense organs and reproduction among invertebrates</b> Cephalization. Development and evolution of nervous system. Sense organs. Reproductive patterns. Reproduction and metamorphosis. Larvae and their evolutionary significance.	<b>6 hrs.</b>

<b>Paper Code and Name</b>	<b>MBCT 1.2: Genetics and Molecular Cell Biology</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Students will understand the basic concept of cell and its components with their functions in details and acquire the detailed knowledge of different pathways related to cell signaling and apoptosis thus enabling them to understand the anomalies in cancer.
CO 2	Students will have adequate understanding and knowledge in Genetics & Cell biology and related aspects making them to take up advanced research in the field of Aquatic and terrestrial organisms studies such as cancer biology, Neurobiology, Physiology etc.

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I: Mendelian genetics</b> An overview of Mendelian Genetics. Phenomenon of dominance and its applications in animals. Mechanisms of dominance. Law of segregations. Law of independent assortment.	<b>4hrs.</b>
<b>Unit II: Linkage and crossing over</b> Sutton view on Linkage, Morgan's view on linkage. Chromosome theory of linkage, complete & incomplete linkage, significance of linkage. Types of crossing over. Somatic and germinal crossing over. Mechanism of crossing over. Synapsis, Kinds of crossing over. Significance of crossing over. Sex linked inheritance. Multiple alleles. Structure of Genes.	<b>6hrs.</b>
<b>Unit III: Chemical nature of genetic material</b> DNA structure and its replication. One gene one polypeptide concept. Genetic control of protein synthesis. Regulation of gene expression in prokaryotes and eukaryotes. Genetic engineering. Gene mutations. Chromosomal mutations. Practical application of mutation. Polyploidy in animals and their application.	<b>8hrs.</b>
<b>Unit IV: Introduction and history of cell biology</b> Techniques in cell biology- Microscopy, Focal length, Angular aperture of lens and Resolving power of the microscope. Light microscopy, Phase-contrast microscope, Dark field microscope, Fluorescence microscopy, Scanning Electron Microscope (SEM) and Scanning Transmission Electron Microscopy (STEM). Staining- Chemical basis of staining, simple staining and differential staining.	<b>10hrs.</b>

<b>Unit V: Separation techniques</b> Chromatography- Different phases of chromatography, Adsorption chromatography, Thin layer chromatography and partition chromatography. Centrifugation- Differential, Gradient, Zonal centrifugation and Equilibrium density centrifugation. Electrophoresis-mechanism of Electrophoresis.	<b>8hrs.</b>
<b>Unit VI: Membrane biology</b> Fluid mosaic model of plasma membrane. Transport across biomembrane- Passive transport, Active transport, Endocytosis and Exocytosis. Structure and functions of cell organelle. Bioenergetics, Protein import to mitochondria.	<b>6 hrs</b>
<b>Unit VII : Cell division and cell cycle</b> Cell division- Amitosis, Mitosis and Meiosis. Cell cycle- phases of cell cycle and molecular events of cell cycle. Cytoskeleton- structure and role in cell architecture, Structure of cilium and flagellum. Cellular aging, Cell death mechanisms- necrosis and apoptosis.	<b>4 hrs</b>
<b>Unit VIII: Cancer biology</b> Cancer: Benign and Malignant tumours. Types of cancer- carcinomas, sarcomas, lymphomas, leukemias and mixed type. Properties of cancer cells, treatment for cancer.	<b>2 hrs</b>

<b>Paper Code and Name</b>	<b>MBCT 1.3: Oceanography</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper,	
CO 1	student will have better understanding of marine and its related biological process and cycles
CO 2	Students will be able to demonstrate how the oceans are connected to and drive major Earth processes, such as atmospheric and oceanic circulation, climate and weather, plate tectonics, and sustainability of human and marine populations

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I</b> Origin of oceans, Continental drift and plate tectonics. History and various disciplines of oceanography- Definitions, dimensions and limits. Institutions related to oceanography. Oceanographic expeditions.	<b>8hrs.</b>
<b>Unit II</b> Waves, tides and tsunamis. Upwelling and sinking. General circulation and currents pattern in the world oceans of Atlantic, Pacific and Indian Ocean. Monsoon currents.	<b>6hrs.</b>
<b>Unit III</b> General submarine topography & oceanographic features - classification of sea floor. Origin and evolution of continental shelf, slope, ridges, trenches, canyons. Topography of Antarctic, Arctic, Atlantic, Indian and Pacific oceans. Features of Arabian sea and Bay of Bengal.	<b>8hrs.</b>
<b>Unit IV</b> Marine Sediment – classification, constituents, distribution and significance of marine sediments. Mudflats, their formation and importance. Principles of bio-geochemistry. Particulate suspended matter.	<b>2hrs.</b>
<b>Unit V</b> Physical properties of sea water and sea ice. Freezing point and factors affecting freezing point of sea water. Distribution and significance of salinity, temperature and density. Heat budget of the ocean. T.S diagram and water masses.	<b>4hrs.</b>

<b>Unit VI</b> Chemical composition of sea water, Constancy of composition and factors influencing composition. Major and minor constituents. pH. Distribution of pH in marine environment, redox potential, selected radioactive isotopes and stable isotopes organic compounds, dissolved gases, process regulating the composition. Trace metals and their biological role	<b>10 hrs</b>
<b>Unit VII</b> Oxygen cycle-Sources, concentration, distribution and factors affecting the distribution of oxygen. Carbon dioxide cycle- sources, concentration, distribution and factors affecting the distribution of carbon dioxide. Nitrogen cycle, phosphorus cycle and silicon cycle. Factors affecting the distribution of nutrient elements. Vertical distribution of nutrient elements in the world ocean.	<b>10 hrs</b>

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper :	
CO 1	Students will understand the evolutionary and functional basis of Marine ecology.
CO 2	Students will understand the Marine environmental pollution with the insights Govt. Acts on environmental conservation.

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I:</b> Ecology and its concepts. Importance of study, major subdivisions of the world oceans. Salient features of Karwar coastal waters. Ecological media, substratum and habitat. Role of abiotic factors- light, temperature, water movements, etc.	<b>8 hrs</b>
<b>Unit II:</b> Biotic factors- Nutrition, competition, predator, prey-predator relationship, Leibigs law of the minimum. Animal associations-intraspecific and interspecific relationships, Ecological succession.	<b>5 hrs</b>
<b>Unit III:</b> Lunar periodicity, biological clock, foodweb and trophic relationships, elementary and functional concepts of an ecosystem.	<b>5 hrs</b>
<b>Unit IV:</b> Energy in ecosystem, Energy flow. Marine Borers-Crustacean and molluscan borers, Marine fouling, methods of prevention of fouling and wood borers.	<b>7 hrs</b>
<b>Unit V:</b> Pollution- Surface, ground water and marine pollution. Agricultural pollution- Insecticides, pesticides, and their effects on aquatic environment. Heavy metal pollution- Sources, causes and impact on terrestrial and aquatic habitats. Solid wastes- type, sources effects and management.	<b>8 hrs</b>
<b>Unit VI:</b>	<b>5 hrs</b>

Bioaccumulation, biotransformation and biomagnification. Bioindicator organisms; Greenhouse effect and global warming. Ozone depletion. Acid rain and its impact. Ecotoxicology-types of toxicity, principles, dose-response.	
<b>Unit VII:</b> Environmental impact assessment- Basic concepts and principles of EIA; Pollution control programs and management of hazardous substances. Application of remote sensing in pollution management.	<b>5 hrs</b>
<b>Unit VIII:</b> Pollution Acts, Constitutional rights and administrative acts for pollution control and management.	<b>5 hrs</b>

<b>Paper Code and Name</b>	<b>MBCT 2.1: Biology of Chordata, Reproductive &amp; Developmental Biology</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	The study of Chordates classifications upgrades student's basic and advanced knowledge.
CO 2	Develop critical understanding how a single-celled fertilized egg becomes an embryo and then a fully formed adult by going through three important processes of cell division, cell differentiation and morphogenesis.

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I: Protochordata and Cyclostomes:</b> Origin of Chordata. Classification and general organization. Development, life cycle and affinities of Urochordata, Cephalochordata and Cyclostomata.	<b>8 hrs</b>
<b>Unit II: Pisces</b> Classification, External morphology, Evolution and adaptive radiation in fishes. Scales, Air-bladder and Sense organs in fishes. Age and growth in fishes, Food and feeding in fishes Reproduction in fishes, migration in fishes. Poisonous fishes.	<b>10 hrs</b>
<b>Unit III: Amphibia, reptilia, aves and mammals</b> Classification, origin and evolution, Biology and Adaptive radiation, Turtle taxonomy and conservation in India. Migrations in Birds and Echolocation in Mammals.	<b>10 hrs</b>
<b>Unit IV: Comparative anatomy:</b> Integuments and its derivatives in vertebrates. Evolution and Differentiations of aortic arches, heart, brain, respiratory, limbs, Kidney and urinogenital systems.	<b>6 hrs</b>
<b>Unit V: Reproductive modes &amp; structure of gametes:</b> Sexual, asexual, parthenogenesis. Oviparity, viviparity and ovo-viviparity. Types of Regeneration. Structure and types of sperms and eggs. Sequence and events of fertilization, prevention of polyspermy.	<b>4 hrs</b>

<b>Unit VI: Developmental biology:</b> Introduction, Cleavage patterns, regulation and morphogenic movements. Fate of Germ layers, placenta in mammals.	<b>2 hrs</b>
<b>Unit VII: Cell differentiations and organogenesis</b> Differentiation of neural tube, antero posterior and dorso ventral axis, differentiations of erythrocytes, myogenesis.	<b>8 hrs</b>

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	understand a detailed account of environmental aspects and planktonology as specialization to improve basics and fundamental knowledge.
CO 2	Insights in to the environment and its disciplines stimulate the interest among the students.

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I:</b> Plankton- Historical background, classification of planktonic organisms, systematic studies. Major groups of plankton in the sea. Phyto- zooplankton interrelationship.	<b>5 hrs</b>
<b>Unit II:</b> Distribution - geographical, vertical and seasonal. Plankton indicators. Vertical migration of plankton. Geographical variations in planktonic community with respect to environmental variables.	<b>5 hrs</b>
<b>Unit III:</b> Biology of diatoms and copepods. Primary production. Factors affecting primary production. Methods of estimation of primary production. Relationship between hydrography and primary production.	<b>5 hrs</b>
<b>Unit IV:</b> Plankton and Fisheries. Collection methods, preservation and Analysis of plankton. Red tide. Luminescent plankton. Plankton of Karwar waters.	<b>5 hrs</b>

<b>Unit V:</b> Nekton- taxonomic groups, horizontal and vertical distribution, factors affecting distribution. Benthos- benthic communities, the epifauna, infauna, general characteristics and adaptations. Littoral zones: rocky, sandy, muddy shores characteristics, adaptations, composition. Zonation in the intertidal zones and factors affecting zonation. Estuarine ecology- classification, physico- chemical characteristics, fauna and flora, economic importance. Kali estuary.	<b>8 hrs</b>
<b>Unit VI:</b> Mangroves- Distribution, conditions, adaptations, fauna and flora, significance. Salt marshes- characteristics, composition, distribution. Coral reefs- characteristics, distribution, types, composition and economical importance.	<b>5 hrs</b>
<b>Unit VII:</b> Pelagic zone- classification, life composition, distribution, variation, significance. Deep sea- life conditions in deep sea, abyssal and hadal zones, faunal composition.	<b>5 hrs</b>
<b>Unit VIII:</b> Conservation of ecosystems, resources. Renewable and non- renewable resources. Wildlife conservation- Definition, importance of wild life, Coastal Regulation Zone rules, Biological diversity act. Loss of biological diversity, source and conservation strategies. Bio reserves and biospheres, wildlife sanctuaries, national parks, marine parks, projects, hotspots, protected areas, endangered species. Application of remote sensing in biodiversity conservation. Environmental education and awareness.	<b>10 hrs</b>

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I:</b> History of aquaculture. General principles underlying the practice of aquaculture. Scope and importance of aquaculture in India.	<b>5 hrs</b>
<b>Unit II :</b> Food and feeding in culturable species. Nutritional requirements, principles of feed formulation, proximal composition of different feed. Feed conversion efficiencies of culturing organisms.	<b>5 hrs</b>
<b>Unit III:</b> Culture systems: Culture in irrigation systems. Paddy fields, sewage disposals, race ways. Monoculture, polyculture. Integrated farming. Bottom and off bottom culture. Rope culture, raft culture, pen culture. Sea ranching.	<b>8 hrs</b>
<b>Unit IV:</b> Construction of fish farm- selection of fish farm site. Topography survey. Ecological survey, water quality, tidal range, layout design. Design of farm physical structures and construction. Equipments and facilities for fish farm operation and management.	<b>5 hrs</b>

<b>Unit V:</b> Farm management- Physical and chemical properties of soil and their impact on construction and maintenance of ponds. Development cost of fish farms. Water characteristics- salinity, pH, dissolved oxygen, temperature, nutrients etc. Eradication of predators. Pond preparation. Transport of seeds. Pond management and feeding. Harvesting and marketing. Criteria for selection of species. Problems in rearing.	<b>12 hrs</b>
<b>Unit VI:</b> Carp culture- Breeding and seed production in fin fishes. Natural seed resources, collection, transportation. Brood stock management. Induced breeding. Fin fish hatchery management.	<b>8 hrs</b>
<b>Unit VII:</b> Macrobrachium (scampi) culture. Salmon and catfish culture. Crop manipulation. Fin fish diseases; Health, hygiene and quarantine measures in fishes.	<b>5 hrs</b>

Fish finder- working principles, fishing without gear. Fishing gears and crafts of Uttara Kannada. Care and maintenance of gears- sterilization, tannin & coal tar and heat treatments. Maintenance of fishing vessels- docking the vessel in a dry dock. Hull preparation and painting. Life saving appliances- life boat, life buoy, life jacket, life raft.	<b>10 hrs</b>
<b>Unit II:</b> Gear accessories: Floats- properties, low-density floats- wood, cork, thermocol, sponge plastic and rubber floats. High-density floats- glass, aluminum, steel, fiberglass floats. Buoy- light buoy, radio buoy and dahn buoy. Sinkers and kites. Properties of natural and synthetic fibers. Types of craft building materials. International Standard Statistical Classification of fishing Gears (ISSCG).	<b>6 hrs</b>

<b>Unit III:</b> Handling of fish and shrimps onboard the fishing vessel- cleaning, sorting & evisceration, water supply, fish holds & containers and personal hygiene; Quality of water, ice and refrigerated seawater for seafood processing; Water- physical, chemical and bacteriological examination of water.  Freezing of fish- Principles and mechanism of freezing and canning of fish; Principles and steps involved in canning; Curing- sun drying, salt curing, smoking of fish and radiation.	<b>13 hrs</b>
<b>Unit IV:</b> Biochemical Composition of fish- protein, fat, fish oils, minerals, vitamins, etc. Post- mortem changes in fish. Spoilage of fish- Bacterial, Enzymatic and Biochemical spoilage. Quality Control- Intrinsic and Extrinsic qualities.	<b>7 hrs</b>
<b>Unit V:</b> The structure of Bacteria- flagella, pili, glycocalyx, cell wall, cell membrane, cytoplasm & spore. Bacterial growth- requisite for bacterial growth. Bacteriology of fish and shellfish.	<b>6 hrs</b>
<b>Unit VI:</b> HACCP Concept in Seafood processing. National and International Quality standards for fish and fishery products. Packing and transportation of fresh and processed sea foods.	<b>6 hrs</b>

<b>Paper Code and Name</b>	<b>MBCT 3.2: Animal Physiology, Endocrinology &amp; Biochemistry</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Realize that very similar physiological mechanisms are used in very diverse organisms.
CO 2	Students will understand the structure and biological significance of carbohydrates, amino acids, proteins, lipids and nucleic acids.

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I: Nutrition</b> Nutritive requirements, Food value, Digestion and absorption in animals.	<b>2 hrs</b>
<b>Unit II: Circulation &amp; Respiration</b> Blood. Composition and functions of blood. Fluid transport. The closed and open circulatory systems. Vertebrates' circulatory mechanism. Integumentary, branchial, and pulmonary respiration. Respiratory pigments. Oxygen/ Carbon dioxide transport. Anaerobic respiration in animals.	<b>9 hrs</b>
<b>Unit III: Excretion and Osmoregulation</b> Basic aspects of the disposition of ammonia and nitrogen. Major nitrogenous end products. Inter relations between habitat and excretion. Ionic and osmotic regulation in animals.	<b>5 hrs</b>
<b>Unit IV: Sense organs and thermoregulation</b> Chemoreceptions, Mechanoreceptions. Thermoreceptions and Photoreception. Propagation of nerve impulses. Cardiac, skeletal and smooth muscles. Mechanism of muscle contraction. Effect of temperature changes and acclimatization. Regulation of body temperature in birds and mammals. Aestivation and hibernation.	<b>7 hrs</b>
<b>Unit V: Endocrinology &amp; Immunology:</b> Comparative anatomy of endocrine glands. Structure, biosynthesis and biological actions of hormones. Structure and functions of hormone systems of crustaceans and fishes. Overview of immune system. Cells and organs of immune system. Antigen & Antibody and its interactions. T- Cell, B-Cell and Cytokines. Vaccines.	<b>7 hrs</b>

<b>Unit VI: Biochemistry</b> Principles of Biochemistry. Chemistry of Carbohydrates, Lipids, Protein, Nucleic acids and Vitamins. Classifications of Enzymes. Mechanism of action of enzymes. Kinetics of enzyme catalyzed reaction activation, Enzyme inhibition, Co-enzymes, Metalloenzymes, Iso-enzymes. Metabolism of Protein and Lipids.	<b>18 hrs</b>

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper :	
CO 1	Students learn various culture techniques and field exposure
CO 2	Hands on training on mariculture management and accountability

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I:</b> Brackish water aquaculture- Shrimp culture. Biology of cultivable Shrimps. Culture practices- Extensive, semi intensive and intensive culture. Aquaculture impact on environment. Paddy cum shrimp culture. Tidal range and pond construction.	<b>8 hrs</b>
<b>Unit II:</b> Culture of milk fish, mullets, tilapia, seabass, cobia and mud crabs. Cage culture practices & prospectus.	<b>8 hrs</b>
<b>Unit III:</b> Recent advances in coastal aquaculture and open sea mariculture. Mussel culture. Pearl oyster culture. Sea cucumber, sea weed, oyster, clam and eel culture.	<b>8 hrs</b>
<b>Unit IV:</b> Hatchery management for shrimp and molluscan seed production. Technique, collection, transportation and breeding of spawners. Induced maturation by eye stalk ablation. Larval rearing technique. Live feed culture: Algal culture and artemia culture, cladoceran and rotifer culture for hatchery production of seeds. Packing and marketing. Induced breeding in molluscs, spat settlement and collection.	<b>10 hrs</b>
<b>Unit V:</b> Nutrition, food and feeding- Nutritional requirements of different species of shell fish and their life history stages. Principle of feed formulation, proximate composition of different shrimp feeds.	<b>5 hrs</b>

<b>Unit VI:</b> Pathology- Problems of diseases and parasites in brackish water culture. Common diseases of cultivable shell fishes. Bacterial, fungal and viral diseases.;. Ecto and endoparasites of shell fishes. Protozoan and helminthic diseases. Prophylaxis, diagnosis and therapeutic measures, Molecular disease diagnostics.	<b>5 hrs</b>
<b>Unit VII:</b> Aquaculture management: Aquaculture authority Act, aquaculture authority guidelines. Effluent treatment system in aquaculture, MPEDA – NACA guidelines for shrimp health management; HACCP in aquaculture; Aqua club concept.	<b>4 hrs</b>

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	understand fisheries biodiversity and its management.
CO 2	have insights of the present status of fisheries as upgraded knowledge.

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I:</b> History of fishery resources. Survey of fishery resources of the world. Present status and future prospectus of fishing industry. Application of Remote sensing in fishery survey.	<b>5 hrs</b>
<b>Unit II:</b> Pelagic fishery resources of India. Oil sardine, lesser sardine and Indian mackerel. Estuarine fishery, milk fish, pearl spot, mullets. Chilka & pulicate lake fisheries. Cochin back waters. Aganashini & Kali estuarine fisheries Demersal Fishery resources of India- Bombay duck, tunas, bill fish, sword fish and seer fish.	<b>15 hrs</b>
<b>Unit III:</b> Flying fish, ribbon fish, white baits, pearch, elasmobranchs, cat fish, pamfrets, sciaenids. Silver bellies, thread fins, flat fishes, carangids, seaweeds, corals, sponges, echinoderms Shell fishery of India: Molluscan-bivalves, gastropods and cephalopods (cuttle fish, squids & octopus)	<b>10 hrs</b>
<b>Unit IV:</b> Fishery byproducts- fish meal, fish body oil, Fish Protein Concentration (FPC), Pearl essence, fish glue, fish guano, fish ensilage.	<b>4 hrs</b>
<b>Unit V:</b> Value added fish products-fish sausages, fish wafers, soup powder, fish pickles, clam pickle and squid rings. Ornamental and industrial fishes.	<b>4 hrs</b>

<b>Unit VI:</b> Fishery products and byproducts: Shark liver oil, shark fins, Fish maws and Isinglass, chitosan, ambergris, beche-de-mers. Seaweed products- agar, algin, iodine, edible sea weeds and sea weed products, fertilizers. Chemical products from sea waters - Extraction and uses of salt, magnesium, magnesium sulphate, bromine, heavy waters. Drugs from the marine organisms.	<b>10 hrs</b>

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Learn the theoretical basis of Biotechnological technique, its principle of working and its correct application
CO 2	Analyze the contribution of marine microbes in water treatment, solid waste management, bioremediation and phytoremediation.

<b>Particulars</b>	<b>Teaching Hours (Max. 50)</b>
<b>Unit I: An Overview of Biotechnology</b> Origin. History of Biotechnology. Definition. Biotechnology is an interdisciplinary activity, Scope and importance of Biotechnology, Biotechnology in India.	<b>5 hrs</b>
<b>Unit II: Cell and Tissue Culture Technology</b> Requirement for animal cell and tissue culture. Substrates for cell growth. Culture media. Sources of cell. Techniques of obtaining cells by disaggregation's of tissue. Culture procedures - storage, preservation and retrieval of culture. Large scale culture of cell lines. Applications of cell culture products.	<b>12 hrs</b>
<b>Unit III: Environmental Biotechnology</b> Introduction of Biotechnology for pollution abatement. Use of Genetically Engineered organisms for removal of specific pollutants. GEM for oil spill, GEM for degrading pesticides and GEM for sequestering heavy metals.	<b>7 hrs</b>
<b>Unit IV: Biotechnological Bioremediation</b> In situ bioremediation. Ex situ bioremediation. Bioremediation of specific pollutants. Phytoremediations. Methods of Phytoremediation, Biosorption and Bioleaching.	<b>6 hrs</b>
<b>Unit V: Aquaculture Biotechnology</b> Introduction. Transgenic fish, Production of transgenic fish. Technique of transfer of transgene. Microinjection, electroporation, sperm-mediated transfer, Retriviral vectors, biolistics and lipofection. Cryopreservation in Marine organisms. Prospects of aquaculture biotechnology in India.	<b>10 hrs</b>

<b>Unit VI: Biotechnological Tools for Disease Diagnostics</b> Diagnostics in aquaculture, Enzyme Linked Immuno assay, Dot Immunobinding Assay, Western blotting, Gene cloning, DNA based Diagnostics, Polymerase Chain Reaction, Nucleic acid probes, Recombinant DNA technology. Disease management technologies.	<b>8 hrs</b>

## MATHEMATICS

(I to IV Semesters)

**Under Choice Based Credit System**

From  
2013-14 & onwards

**KARNATAK UNIVERSITY, DHARWAD**  
**Post Graduate Department of Studies in Mathematics**  
**SYLLABUS & REGULATIONS**  
For  
**M.A. / M.Sc. (MATHEMATICS)**  
(Choice Based Credit System)  
w.e.f. 2008-2009  
**Regulations and Scheme of Examination**  
for  
**M.A. / M.Sc. (Mathematics) Degree Course under**  
**Choice Based Credit System (CBCS)**

**1.0. Duration of the Course:**

The M.A. / M.Sc. Degree Course is of two years duration, spread over four semesters each of four months duration.

**1.2 (A) Eligibility for Admission:**

B.A. / B.Sc. Graduates of Karnatak University or of any other University recognized as equivalent there to with Mathematics as optional subject. The candidate should have obtained at least 45% of marks in optional subjects as well as in aggregate. Relaxation in respect of SC / ST / Cat-I etc. will be followed as per prevailing rules of the University.

**(B) Admission:**

- (i) **Intake:** 70 students (but may vary from time to time with the permission from the University) for the first semester. This includes admission under enhanced fee structure. Other rules for admission are as per University notification from time to time.
- (ii) **Admission to other Semesters:** Students are allowed to take admissions to successive semesters under carry over benefit (COB) facility.

**2. Attendance:**

Every student must have at least 75% attendance in each of the courses (Theory & Practical) in each semester. Shortage of attendance will be dealt with as per the University rules from time to time.

**3. Medium of Instruction:**

The medium of instruction shall be English.

**4. Scheme of Instructions:**

In the First three Semesters (I, II, III) there will be 3 Core Theory Papers of 4 credits each. In addition, in the I Semester there will be 3 Core Theory Papers of 2 credits each. In each of the II and III Semesters there will be 2 Core Theory Papers of 2 credits each.

In IV Semester there will be 4 Core Theory Papers of 4 credits each, 3 Core Theory Papers of 2 credits each.

In each of II, III, IV Semesters there will be 1 Core Practical Paper of 2 Credits.

In each of I, II, III Semesters there will be two Elective Theory Papers of 4 and 2 Credits. These elective papers have to be chosen by the students of other departments.

Our M.A. / M.Sc. students have to take electives of 6 Credits in each of I, II, III Semesters offered by other departments.

**5. Scheme of Evaluation:**

Examination will be conducted at the end of each semester.

Each Core theory paper of credits 4 and 2 will have an examination of 3 and 2 hours duration respectively and carrying maximum of 75 marks and 35 marks respectively. Each Core practical will have examination of 2 hours duration.

For each theory / practical of 4 and 2 credits, there will be an internal assessment test carrying 25 and 15 marks respectively.

Each elective paper of 4 credits will have examination of 3 hours duration carrying 75 marks and will have internal assessment test for 25 marks.

Each elective paper of 2 credits will have examination of 2 hours carrying 35 marks and will have Internal Assessment Test for 15 marks.

**6. Maximum period for the completion of the Degree Programme:**

There shall be fully carry over system from first through fourth semesters. Maximum number of years for a student to complete the degree is as specified by the University from time to time.

**8.** The General Regulations Governing Post-Graduate Programmes under CBCS and Regulations Governing Post-Graduate Programmes in the Faculty of Science and Technology under CBCS of Karnatak University, Dharwad are applicable to this course for all the matters not covered under this.

Regulations Governing Post-Graduate Programmes in the  
Faculty of Science & Technology under Choice Based Credit System  
(Framed under Section 44(1)(c) of the K.S.U. Act 2000)

**1.1. Title**

These Regulations shall be called “Regulations Governing the Post-Graduate Programmes in the Faculty of Science & Technology under the Choice Based Credit System” in Karnatak University, Dharwad.

**2.0. Commencement**

These Regulations shall come into force with effect from the academic year 2011-12.

**3.0. Definitions**

- a. In these Regulations, unless otherwise provided: “Academic Council” means Academic Council of the University constituted according to the Karnataka State Universities Act, 2000.
- b. “Board of Studies” means P.G. Board of Studies of the University, Adhoc / Combined and Steering Committees of International Diploma Programmes in the discipline / subjects concerned.
- c. “Compulsory Course” means fundamental paper, which the student admitted to a particular Post-Graduate Programme, should successfully complete to receive the Post Graduate Degree in the concerned subject.
- d. “Course Weightage” means number of credits assigned to a particular course.
- e. “Credit” means the unit by which the course work is measured. One Credit means one hour of teaching work or two hours of practical work per week. As regards the marks for the courses, 1 Credit is equal to 25 marks, 2 credits are equal to 50 marks, 3 credits are equal to 75 marks and 4 credits are equal to 100 marks.
- f. “Cumulative Grade Point Average (CGPA)” refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward from first semester to subsequent semesters.
- g. “Degree” means Post-Graduate Degree.
- h. “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each course by the candidate in both Internal Assessment and Semester – end Examinations.
- i. “Grade Point Average (GPA)” refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester.
- j. “Open Elective Course” means a paper offered by a Department to the students of other Departments.
- k. “Post Graduate Programme” means semesterised Master’s Degree Programmes excluding P.G. Diploma.
- l. “Specialization course” means advanced paper offered by a Department that a student of that Department can opt as a special course.
- m. “Student” means the student admitted to programmes under (k).
- n. “University” means Karnatak University, Dharwad.

**4.0. Minimum Eligibility for Admission**

A candidate, who has successfully completed Bachelor’s Degree programme in Science or any other Degree programme of this University or of any other University recognized as equivalent thereto by this University, shall be eligible for admission to the Post Graduate Programmes in science provided the candidate also satisfies the conditions like the minimum percentage of marks and other eligibility conditions as prescribed by the University from time to time.

Admissions shall be as per Government of Karnataka reservation policy and the directions issued in this regard from time to time.

#### **5.0. Duration of the Programme**

The duration of the study for the Post-Graduate Degree programme shall extend over a period of two (three in case of MCA) consecutive academic years, each academic year comprising two semesters and each semester comprising sixteen weeks with a minimum of ninety working days.

However, the students, who discontinue the programme after one or more semesters due to extraordinary circumstances, are allowed to continue and complete the programme with due approval from the Registrar. Candidates shall not register for any other regular course other than Diploma and Certificate courses being offered on the campus during the duration of P.G. Programme.

#### **6.0. Medium of Instruction and Evaluation**

The medium of instruction shall be English. However, the students may write the examinations in Kannada if so provided by the concerned Board of Studies.

#### **7.0. Programme Structure**

- 7.1. The students of Post-Graduate Programme shall study the courses as may be approved by the concerned Board of Studies, Faculty and the Academic Council of the University from time to time subject to minimum and maximum credits as outlined in these regulations.
- 7.2. There shall be three categories of courses namely, Compulsory Courses, Specialization Courses and Open Elective Courses.
- 7.3. Each programme shall have a set of Compulsory Courses, as stipulated in the regulations governing the concerned programme, that a student must complete to get the concerned degree.
- 7.4. In those programmes that offer specialization courses, the students shall choose the prescribed number of Specialization Courses offered within the Department.
- 7.5. Each Department shall offer Open Elective courses for students of other Departments. The students of a Department shall choose Open Elective courses from among those prescribed by the University and selected by the Department from time to time. P.G. Centers and affiliated colleges, can offer those Open Elective Courses which are approved or prescribed by their Parent Department of the University. Such Open Elective courses shall be taught by qualified teachers approved by the University.
- 7.6. The credits for each of the Compulsory Courses may vary from 2 to 4; for Specialization Course, from 2 to 4; and for Open Elective Course, from 2 to 4. Wherever project work / field work / practical are involved in the course, the credits may extend to 6 or as otherwise provided by concerned programme.
- 7.7. The minimum credits for P.G. Programme shall be 96. In the case of MCA, the minimum number of credits shall be 158 and in case of M.Sc. Computer Science the minimum credits are 116.
- 7.8. The students shall undertake project / field work during the programme as a compulsory course or in lieu of Specialization Course or Open Elective Course if so specified by the concerned Board of Studies.
- 7.9. The ratio between Compulsory, Specialization and Open Elective may differ from department to department.
- 7.10. The detailed programme structure for Faculty of Science & Technology shall be as prescribed and shown in Annexure-I, Annexure-Ia & Annexure-Ib.

- 7.11. The Open Elective Courses generally will have practical component, unless otherwise specified by the respective Board of Studies. The number of students admitted to the course shall commensurate with the availability of infrastructure.

#### **8.0. Attendance**

- 8.1. Each course shall be taken as a unit for the purpose of calculating the attendance.
- 8.2. Each student shall sign the attendance register maintained by the Department for each course for every hour / unit of teaching / practical. The course teachers shall submit the monthly attendance report to the Chairperson of the Department who shall notify the same on the notice board of the Department during the second week of the subsequent month.
- 8.3. Marks shall be awarded to the student for attendance as specified in the regulations concerning evaluation.
- 8.4. A student shall be considered to have satisfied the required attendance for each course if he / she has attended not less than 75% of the total number of instructional hours during the semester.
- 8.5. There is no provision for condoning shortage of attendance.
- 8.6. The students who do not satisfy the prescribed requirement of attendance shall not be eligible for the ensuing examination. Such candidates may seek admission afresh to the given semester.
- 8.7. Such of the candidates who have participated in State / National level Sports, NSS, NCC, Cultural activities and other related activities as stipulated under the existing regulations shall be considered for giving attendance for actual number of days utilized in such activities (including travel days) subject to the production of certificates from the relevant authorities within two weeks after the event.

#### **9.0. Examination**

- 9.1. There shall be an examination at the end of the each semester. The odd semester examinations shall be conducted by the respective Departments / P.G. Centres / Colleges. The even semester examinations shall be conducted by the University.
- 9.1.1. Unless otherwise provided, there shall be semester – end examination of 3 hours duration for 75 / 100 marks; 1.5 hours for 50 marks and 2 / 4 hours for 35 / 75 marks practical examination.
- 9.1.2. Every student shall register for each semester – end examination as per the University Notification by submitting duly completed application form through the proper channel and shall also pay the fees prescribed.
- 9.1.3. The Office of the Registrar (Evaluation) shall allot the Register Number to the candidate at the 1<sup>st</sup> semester – end examination. That will be the Register Number of the candidate for all subsequent appearances at semester – end examinations.
- 9.1.4. The Answer scripts shall be in the safe custody of the University for a maximum period of six months from the date of announcement of results. These shall be disposed off after six months.
- 9.1.5. The programme under CBCS is a fully carry-over system. A candidate reappearing for either the odd or even semester examinations shall be permitted to take examinations as and when they are conducted (even semester examination in even semester and odd semester examination in odd semester).
- 9.1.6. Candidates who have failed, remained absent or opted for improvement in any course / courses shall appear for such course / courses in the two immediate successive examinations that are conducted. However, in the case of the candidates appearing for improvement of their marks, the marks secured in the previous examination shall be retained, if the same is higher.

- 9.1.7. Candidates who desire to challenge the marks awarded to them, in the even semester – end examinations, may do so by submitting an application along with the prescribed fee to the Registrar (Evaluation) within 15 days from announcement of results.

**9.2. Odd Semester Examination**

- 9.2.1. There shall be a Board of examiners to set, scrutinize and approve question papers.
- 9.2.2. The BOE shall scrutinize the question papers submitted in two sets by the paper setters and submit the same to the office of the Registrar (Evaluation).
- 9.2.3. The office of the Registrar Evaluation shall dispatch the question papers to the Departments / P.G. Centres / Colleges who shall conduct the Examinations according to the Schedule announced by the University.
- 9.2.4. The Chairperson of the Department / Administrator of the P.G. Centre / Principal of the College shall appoint one of their full time course teachers as Post Graduate Programme (PGP) Coordinator who shall conduct the examinations and arrange for evaluation of answer scripts.
- 9.2.5. Answer scripts shall be valued by the examiners appointed by the University. However, in those centres where an examiner for a particular course is not available, then the answer scripts of that course shall be dispatched to the office of the Registrar (Evaluation) who shall arrange for valuation of the same.
- 9.2.6. There shall be single valuation. The examiners (Internal or External) shall value the answer scripts and shall indicate the marks awarded to each question on the answer script.
- 9.2.7. The Marks List, a copy of the Examination Attendance Sheet and the sealed bundles of the answer scripts shall be dispatched by the PGP Coordinator to the Registrar (Evaluation)'s Office at the conclusion of the valuation at the respective centers.
- 9.2.8. The Office of the Registrar Evaluation shall process and announce the results.

**9.3. Even Semester**

- 9.3.1. There shall be a Board of Examiners to set, scrutinize and approve question papers.
- 9.3.2. As far as practicable, it will be ensured that 50% of the paper setters and examiners are from other Universities / Research Institutes.
- 9.3.3. Each answer script of the semester – end examination (theory and project report) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be the average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks, such a script shall be assessed by a third examiner. The marks allotted by the third examiner shall be averaged with nearer award of the two evaluations.
- 9.3.4. Provided that in case the number of answer scripts to be referred to the third examiner in a course exceeds minimum of 5 or 20% of the total number of scripts, at the even semester – end examinations, such answer scripts shall be valued by the Board of Examiners on the date to be notified by the Chairperson of the Board of Examiners and the marks awarded by the Board shall be final.
- 9.3.5. Wherever dissertation / project work is prescribed in the even semesters of a programme, the same shall be evaluated by both internal and external examiners. The evaluation shall be as prescribed by the concerned Board of Studies.
- 9.3.6. In case of programmes with practical examination details of maximum marks, credits or duration may vary from Department to Department as specified by the concerned Board of Studies.

**9.4. Evaluation**

- 9.4.1. Each Course shall have two evaluation components – Internal Assessment (IA) and the Semester End Exams.

9.4.2. The IA component in a course shall carry 25% / 30% / 50% and the Semester End Examination shall carry 75% / 70% / 50% respectively, as the case may be. Courses having 25% & 30% / 50% marks as internal assessment shall have 3 / 5 marks allotted to attendance. However, in case of project work, the distribution of marks for Internal Assessment and Examination shall be left to the discretion of the concerned BOS.

9.4.3. Marks for attendance shall be awarded to the students according to the following table. For courses carrying 25% of marks for IA, the attendance marks shall be

<b>Attendance (in percentage)</b>	<b>Marks</b>
Above 90	3
Above 80 and up to 90	2
Above 75 and up to 80	1

9.4.4. Internal Assessment (IA) shall be based on written tests, practical and seminars. However, the number of IA components per course per semester shall not be less than two.

9.4.5. The IA marks list shall be notified on the Department Notice Board as and when the individual IA components are completed and the consolidated list shall be submitted to the Office of the Registrar Evaluation before the commencement of semester – end examination, or as directed by the University.

9.4.6. The tests shall be written in a separately designated book supplied the University which shall be open for inspection by the students after evaluation.

9.4.7. There is no provision for seeking improvement of Internal Assessment marks.

9.4.8. The IA records, pertaining to Semester Examination, shall be preserved by the department / centres / colleges for a period of one year from the date of semester examination. These records may be called by the University or a body constituted by the University as and when deemed necessary.

9.4.9. The dissertation / project work viva-voce shall be conducted by an internal and external examiner.

#### **10.0. Maximum duration for completion of the Programme**

10.1. A candidate admitted to a post graduate programme shall complete it within a period, which is double the duration the programme from the date of admission.

10.2. Whenever the syllabus is revised, the candidate reappearing shall be allowed for the examinations only according to the new syllabus.

#### **11.0. Declaration of Results**

11.1. The minimum for a pass in each course shall be 40% of the total marks including both the IA and the semester – end examinations. Further, the candidate shall obtain at least 40% of the marks in the semester – end examination. There is no minimum for the IA marks.

11.2. Candidates shall secure a minimum of 50% in aggregate in all courses of a programme in each semester to successfully complete the programme.

11.3. Candidates shall earn the prescribed number of credits for the programme to qualify for the PG Degree.

11.4. For the purpose of announcing the results, the aggregate of the marks secured by a candidate in all the semester examinations shall be taken into account. However, Ranks shall not be awarded in case the candidate has not successfully completed each of the semesters in first attempt or has not completed the programme in the stipulated time (vide Regulation 5) or had applied for improvement of results.

#### **12.0. Marks, Credit Points, Grade Points, Grades and Grade Point Average**

The Grade points and the grade letters to candidates in each course shall be awarded as follows:

Credit Point (CP): The Credit Point for each course shall be calculated by multiplying the grade point obtained by the credit of the course.

The award of Grade Point Average (GPA) for any student is based on the performance in the whole semester. The student is awarded Grade Point Average for each semester based on the Total Credit Points obtained and the total number of credits opted for. The GPA is calculated by dividing the total credit points earned by the student.

**KARNATAK UNIVERSITY, DHARWAD**  
**Department of Mathematics**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**(w.e.f. 2013-14)**

**Programme Specific Outcomes (PSOs)**

After completion of this programme, the student will be able to

- PSO1. Understand the fundamentals in mathematics
- PSO2. Capable to develop ideas based on mathematical axioms.
- PSO3. Apply different methods for the solution of problems.
- PSO4. Able to develop the research studies in mathematics and related areas.
- PSO5. Understand the applications of mathematics with problem solving skills, thinking, creativity and demonstration.

### M.A. / M.Sc. I SEMESTER

#### CORE PAPERS:

<b>Paper Code and Name: PG83T101: Algebra-I</b>	Teaching Hours: 50
Course Outcomes (COs)	
After completing this paper, the students will be able to: CO1. To simplify algebraic expression, using commutative, associative and distributive properties. CO2. Identify the types of group. CO3. Understand the concepts of Sylow's theorem. CO4. Explain and demonstrate accurate and efficient use of advanced techniques. CO5. Prove and explain the concepts from advance algebra	

**Unit I:** Peano axioms. Natural numbers. Properties of natural numbers. Natural numbers as a well-ordered set. Finite sets and their properties. Infinite sets, countable and uncountable sets. Examples. Cardinal numbers and its arithmetic. Schroeder-Bernstein theorem. Cantor's theorem and continuum hypothesis. Zorn's lemma, Axiom of choice and well-ordering principle and their equivalence.

**Unit II:** Group, subgroup-definition, examples and elementary properties. Normal subgroup and quotient group. Group homomorphisms. Isomorphism theorems and the correspondence theorem. Center of a group and commutator subgroup of a group. Cyclic group. Lagrange's theorem. Euler's and Fermat's theorems as consequences of Lagrange's theorem. Symmetric group  $S_n$ . Structure theorem for symmetric groups. Action of a group on a set. Examples. Orbit and stabilizer of an element.

**Unit III:** Class equation of a finite group. Cauchy's theorem for finite groups. Sylow theorems. Applications. Wilson's theorem.

**Unit IV:** Subnormal series of a group. Solvable group. Solvability of  $S_n$ . Composition series of a group. Jordan-Holder theorem.

<b>Paper Code and Name: PG83T102: Real Analysis</b>	Teaching Hours: 50
Course Outcomes (COs)	
After completing this paper, the students will be able to: CO1. Describe the real line as a complete ordered field and prove the properties of real numbers. CO2. Understand interior point, limit point, closed set, open set, compact set and prove their properties. CO3. Explain the basic theory of metric space and its related concepts such as continuity, completeness, compactness and connectedness and prove their results in the metric space. CO4. Apply the Mean Value Theorem and the Fundamental Theorem of Calculus to problems in the context of real analysis. CO5. Determine the Riemann integrability of a bounded function and prove theorems concerning integration.	

**Unit I:** The Completeness Property of  $\mathbb{R}$ : The Least Upper Bound Property (LUB Property) and the Greatest Lower Bound Property (GLB Property). Archimedean Property. The existence of  $\sqrt{2}$ . Density of Rational Numbers. Nested Interval Property. Bolzano Weierstrass Theorem. Heine-Borel theorem.

**Unit II:** Metric spaces. Basic definition. Compactness, connectedness, sequences, subsequences and Cauchy sequences in a metric space.  $\mathbb{R}$  as a complete metric space. Limit, continuity and connectedness. Kinds of discontinuities. Algebraic completeness of the complex field.

**Unit III:** Differentiation. Mean value theorems. The continuity of derivatives. Derivatives of higher orders. Taylor's theorem. Analytic functions. Functions of class  $C^\infty$  (which are not analytic).

**Unit IV:** Riemann-Stieltjes integral, its existence and linearity, the integral as a limit of sum, change of variables. Mean value theorems. Functions of bounded variation. The fundamental theorem of calculus.

**Unit V:** Absolute and conditional convergence of series. Riemann's derangement theorem. Sequences and series of functions. Uniform convergence. Uniform convergence and continuity, Uniform convergence and integration. Uniform convergence and differentiation. The Stone-Weierstrass theorem.

<b>Paper Code and Name: PG83T103: Topology-I</b>	Teaching Hours: 50
Course Outcomes (COs)	
After completing this paper, the students will be able to:	

CO1. Understand to construct topological spaces using general properties of open sets, closed sets, neighborhoods, basis and sub-basis and from metric spaces.

CO2. Apply the properties of open sets, closed sets, interior points, accumulation points and derived sets in deriving the proofs of various characterizations of topological spaces.

CO3. Use continuous functions and homeomorphisms to understand structure of topological spaces

CO4. Understand the concepts and properties of the compact, locally compact and connected topological spaces.

**Unit I: Topological Spaces:** Topological Spaces, open sets, closed sets, closure, accumulation points, derived sets, interior, boundary. Bases and subbasis, dense sets, closure operator, neighborhood system, subspaces, convergence of sequences.

**Unit II: Continuity and other Maps:** Continuous maps, continuity at a point, continuous maps into  $\mathbb{R}$ , open and closed maps, homeomorphisms, finite product spaces, projection maps.

**Unit III: Connectedness:** Connected and disconnected spaces, separated sets, intermediate value theorem, components, local connectedness, path connectedness.

**Separation Axioms:**  $T_0$ ,  $T_1$  and  $T_2$  spaces.

**Unit IV: Compactness:** Cover, subcover, compactness, characterizations, invariance of compactness under maps, properties.

**Metric Spaces:** Metrics on sets, distances between sets, diameters, open spheres. Topology induced by a metric, equivalent metrics, continuity of the distance, convergence in metric spaces.

**Nets and Filters:** Topology and convergence of nets, Hausdorffness and nets, compactness and nets. Filters, convergence of filters, ultrafilters, Cauchy filters.

<b>Paper Code and Name: PG83T105: Discrete Mathematics</b>	Teaching Hours: 25
Course Outcomes (COs)	

After completing this paper, the students will be able to:

CO1. Understand Boolean algebra

CO2. Apply Coding theory

CO3. Understand the Basic Graph theory

CO4. Check traversability of a network.

### **Unit I: BOOLEAN ALGEBRA AND LATTICES:**

Partially ordered sets. Lattices, Complete, Distributive, Complemented lattices. Boolean functions and expressions. Propositional calculus, logical connectives, truth values and tables. Boolean algebra to digital networks and switching circuits.

**Coding Theory:** Coding of binary information and error detection, Group codes, decoding and error correction.

**Unit II: Graph Theory:** Basic Concepts: Different types of graphs, subgraphs, walks and connectedness. Degree sequences, directed graphs, distances and self-complementary graphs.

**Blocks:** Cut-points, bridges and blocks, block graphs and cut-point graphs.

**Trees and Connectivity:** Characterization of Trees, Spanning Trees, centers and centroids, connectivity, edge connectivity, arboricity and vertex arboricity.

**Partitions and Traversability:** Eulerian and Hamiltonian graphs.

<b>Paper Code and Name: PG83T106: Computer Programming</b>	Teaching Hours: 25
Course Outcomes (COs)	
After completing this paper, the students will be able to: CO1. Develop the algorithm. CO2. Understand the computer programming language. CO3. Develop the skill for C-Programming. CO4. Understand the data structure in the programme.	

### **Unit I: C – Programming:**

C – essentials, basic structure of a C – program. Character set, constants and variables, data types, declaration of variables, assignment statement, symbolic constants, arithmetic operators, relational operators, logical operators, assignment operators, increment and decrement operators, conditional operator, arithmetic expressions – evaluation. Input / output operations: reading / writing a character, formatted input / output.

**Unit II:** Decision making and branching: IF statement, IF ELSE, Nested if ..... else statements, else if ladder, switch statement, the ? : operator, GO TO statement. Decision making and Looping : The while loops, do statement, for statement, jumps in loops. Arrays : one and two dimensional arrays and initialization. Multidimensional arrays, structures, pointers and file handling.

<b>Course Outcomes (COs)</b>	
After completing this paper, the students will be able to: CO1. Formulate Linear Programming problems. CO2. Apply methods to solve LPP CO3. Understand Transportation Problems and Assignment Problems. CO4. Compute Game Theory Problems. CO5. Use Queuing Theory for Stochastic Process and Markov Chain.	

**UNIT-I:** Linear Programming: Introduction, Formulation of LPP, General Mathematical model of LPP. Slack and Surplus variables, Canonical and Standard form of LPP, Graphical method, Standard LPP and Basic solution, Fundamental Theorem of LPP, Simplex Algorithm, Big-M method and Revised Simplex Algorithm.

**UNIT-II:** Concept of duality: Formulation of dual LPP, Duality theorem, Advantages of duality, Dual Simplex Algorithm and Sensitivity Analysis.

**UNIT-III:** Transportation Problem: Introduction, Transportation Problem, Loops in Transportation Table, Methods for finding initial basic Feasible Solution, Tests for Optimality, Unbounded Transportation Problem.

Assignment problem: Mathematical form of the Assignment Problem, Methods of solving Assignment Problem, Variations of the Assignment Problem.

**UNIT-IV:** Game Theory: Introduction, 2 x 2 Game, Solution of Game, Network Analysis by Linear Programming, Brow's Algorithm. Shortest route and Maximal flow Problems, CPM and PERT.

Queuing Theory: Introduction to Stochastic Process, Markov chain, t.p.m., c-k equations, Poisson process, Birth and Death process, Concept of queues, Kendall's notation, m/m/1, m/m/s queues and their variants.

#### CORE PAPERS:

<b>Paper Code and Name: PG83T201: Algebra-II</b>	Teaching Hours: 50
Course Outcomes (COs)	
After completing this paper, the students will be able to: CO1. Understand rings, ideals, field and Euclidean domain. CO2. Find the roots of polynomials. CO3. Understand the characteristic of rings and fields. CO4. Understand the fundamental concepts of homomorphism and their role in mathematics. CO5. Apply uniqueness theorem.	

#### Ring Theory:

**Unit I:** Ring, subring, ideal, factor ring-definition and examples. Homomorphism of rings. Isomorphism theorems. Correspondence theorem. Integral domain, field and embedding of an integral domain in a field. Prime ideal, maximal ideal of a ring. Polynomial ring  $R[X]$  over a ring  $R$  in an indeterminate  $X$ .

**Unit II:** Principal ideal domain. Euclidean domain. The ring of Gaussian integers as an Euclidean domain. Fermat's theorem. Unique Factorization domain. Primitive polynomial. Gauss lemma.  $F[X]$  is a unique factorization domain for a field  $F$ . Eisenstein's criterion of irreducibility for polynomials over a UFD.

#### Field Theory:

**Unit III:** Field, subfield, prime subfield – definition and examples. Characteristic of a field. Characteristic of a finite field.

Field extensions. Finite extensions. Algebraic extensions. Transitivity theorems. Simple extension.

**Unit IV:** Roots of polynomials. Splitting field of a polynomial. Existence and uniqueness theorems. Existence of a field with  $p^n$  element for a prime  $p$  and a positive integer  $n$ .

Course Outcomes (COs)	
After completing this paper, the students will be able to: CO1. Construct the appropriate fuzzy sets using membership function of uncertain problems. Co2. Understand the differences in crisp sets and fuzzy sets. CO3. Construct the fuzzy numbers corresponding to uncertain and imprecise collected data. CO4. Create new fuzzy topological spaces by using fuzzy sets.	

**Unit I: Introduction:** From classical Sets (crisp sets) to fuzzy sets, Basic definitions, basic operations on fuzzy sets, fuzzy sets induced by mappings, Types of fuzzy sets.

**Fuzzy Sets Versus Crisp Sets:** The  $\alpha$  - cuts, strong  $\alpha$  - cuts, properties of cuts, representation of fuzzy sets, decomposition theorems, Zadeh's extension principle.

**Unit II: Operations on Fuzzy Sets:** Types of operations, fuzzy complements, fuzzy intersections, t – norms, fuzzy unions, t – conorms, combinations of operations, aggregation operations.

**Fuzzy Arithmetic:** Fuzzy numbers, Linguistic variables, arithmetic operations on intervals and fuzzy numbers, fuzzy equations.

**Unit III: Fuzzy Relations:** Crisp and fuzzy relations, Projections and cylindric extensions, binary fuzzy relations, membership matrices and sagittal diagram, inverse and composition of fuzzy relations, binary fuzzy relation on a single set, fuzzy equivalence relation, fuzzy ordering relation, fuzzy morphisms, sup and inf compositions.

**Fuzzy Logic:** An overview of classical logic. Multivalued logics, fuzzy propositions, fuzzy quantifiers, Linguistic hedges, inferences from conditional fuzzy propositions, qualified fuzzy propositions and quantified fuzzy propositions.

Fuzzy rule based systems and fuzzy nonlinear simulation.

**Unit IV: Fuzzy Topology:** Change's and Lowen's definition of fuzzy topology. Continuity, open and closed maps.  $\alpha$  - shading families,  $\alpha$  - connectedness and  $\alpha$  - compactness.

**Applications:** Applications of fuzzy sets and fuzzy logic to various disciplines including Computer Science.

<b>Paper Code and Name: PG83T402C: Relativity</b>	Teaching Hours: 50
Course Outcomes (COs)	
After completing this paper, the students will be able to:	
CO1. Represent Lorentz group, Time dilation, Space contraction.	
CO2. Understand contraction symmetric and skew symmetric tensors.	
CO4. Understand tensor algebra and calculus in curved space-time.	
CO4. Derive Einstein field equation.	

**Unit I:** Special Theory of relativity, Lorentz transformations. Representation of Lorentz group. Time dilation. Space contraction. Relativistic mechanics and particle dynamics.

**Unit II:** Covariant, contravariant vectors and tensors. Tensor algebra. Transformation laws. Contraction Symmetric and Skew symmetric tensors.

**Unit III:** Space-time as a differentiable manifold Tensor algebra and calculus in curved space-time. Parallel transport, covariant derivative, Connection coefficient. Geodesics, geodesic deviation. Riemann curvature tensor. The Bianchi identities.

**Unit IV:** The general Theory of Relativity. Principle of equivalence. The Newtonian limit. Derivation of Einstein field equation.

Course Outcomes (COs)	
After completing this paper, the students will be able to:	

CO1. Understand the characteristics of ring and ideal. CO2. Discuss Modules. CO3. Apply Schur's lemma and Jordan-Holder theorem. CO4. Determine ideals in matrix ring. CO5. Understand Noetherian and Artinian rings.
---

**Unit I:** Ring, subring, left ideal, right ideal, ideal, factor ring-definition and examples. Ring homomorphism, isomorphism theorems, correspondence theorem.

**Unit II:** Module, submodule, factor module-definition and examples. Homomorphisms of modules, isomorphism theorems, correspondence theorem. Simple module, Schur's lemma. Noetherian, Artinian modules, composition series of modules, Jordan-Holder theorem, modules of finite length.

**Unit III:** The ring  $M_n(R)$  of  $n \times n$  matrices over a ring  $R$ . Ideals in matrix ring, ring with matrix units. Simple rings.

Jacobson radical  $J(R)$  of a ring. Basic properties. Prime ring semiprime ring, right primitive ring, Jacobson's density theorem. Prime ideal, semiprime ideal.

**Unit IV:** Noetherian and Artinian rings, Levitzki's theorem. Wedderburn theorem for division rings.

Lower nilradical, upper nilradical. Levitzki's radical of a ring.

Subdirect product of rings, subdirectly irreducible ring, Birkhoff's theorem.

Course Outcomes (COs)	
After completing this paper, the students will be able to:	
CO1. Understand characteristic of a field and splitting field of a polynomial.	

CO2. Understand algebraic extension, algebraic closure and algebraically closed field. CO3. Apply Artin's theorem, Hilbert's theorem and Artin – Schreier's theorem. CO4. Discuss Galois groups of quadratic, cubic and quartic polynomials.
--

**Unit I:** Introduction : Field extensions, characteristic of a field, finite field , splitting field of a polynomial .

**Unit II:** Algebraic extension , algebraic closure , algebraically closed field . Separable extension , simple extension , primitive element theorem . Inseparable extension, purely inseparable extension . Perfect field , imperfect field . Normal extension, group of automorphisms of field extensions .

**Unit III:** Linear independence of characters , Artin's theorem . Norm and trace . Cyclic extension , Hilbert's theorem 90 , Artin – Schreier's theorem .

**Unit IV:** Solvable extension , solvability by radicals, insolubility of the quintic, theorem of Abel – Ruffini . Galois groups of quadratic, cubic and quartic polynomials over the rational field .

After completing this paper, the students will be able to: CO1. Understand residue systems and linear congruences. CO2. Discuss Diophantine equations. CO3. Discuss primitive roots with modulo p. CO4. Understand quadratic congruences. CO5. Apply Euler's partition theorem.	

## Congruences:

**Unit I:** Basic properties, residue systems, linear congruences, the Theorems of Fermat and Wilson (Rearranged). The Chinese Remainder Theorem, polynomial congruences, Diophantine equations. Arithmetic functions -  $\varphi(n)$ ,  $d(n)$  and  $\sigma(n)$ , their multiplicative properties, mobius Inversion formulas.

**Unit II:** Primitive roots – properties of reduced residue systems, primitive roots modulo  $P$ .

Prime numbers – Elementary properties of  $T(x)$ , Tchebychev's Theorem, some unsolved problems.

**Unit III:** Quadratic congruences – Eulers criterion, the Legendre symbol, the quadratic reciprocity law and its applications.

**Unit IV:** Partition theory – Euler's partition theorem, generating functions, Identities between infinite series and products.

Geometric Number Theory – Lattice points, Gauss's circle problem, Dirichlet's Division problem.

CO1. Discuss factorization and coverings of graphs.	
CO2. Understand the planarity of graphs.	
CO3. Apply coloring of graphs.	
CO4. Discuss spectra of graphs	
CO5. Discuss domination parameters of graphs.	

**Unit I: Factorization** – 1-factorization, 2-factorization, Decomposition and labelings of Graphs.

**Coverings:** Vertex covering, edge covering, independence number and matchings and matching polynomials.

**Unit II: Planarity:** Planar graphs, outerplanar graphs, Kuratowski criterion for planarity and Euler's polyhedron formula.

**Graph Valued functions:** Line graphs, subdivision graph and total graphs.

**Unit III: Colorings:** Chromatic numbers and chromatic polynomials.

**Spectra of Graphs:** Adjacency matrix, incidence matrix, characteristic polynomials, eigen values, graph parameters, strongly regular graphs and Friendship Theorem.

**Unit IV: Groups and Graphs:** Automorphism group of a graph, operations on permutation graphs, the group of a composite graph.

**Domination:** Dominating sets, domination number, domatic number and its bounds, independent domination of a number of a graph, other domination parameters.

Theory of External graphs and Ramsey Theory.

<b>Course Outcomes (COs)</b>	
After completing this paper, the students will be able to: CO1. Understand entire and meromorphic functions. CO2. Apply Poisson – Jensen’s formula for meromorphic functions. CO3. Discuss Proximity function, Counting function and Characteristic function. CO4. Apply Picard’s theorem and Borel’s theorem to prove second fundamental theorem of Nevanlinna theory and uniqueness theorem.	

**Unit I:** Basic Properties of Entire Functions. Order and Type of an Entire Function. Relationship between the Order of an entire Function and its Derivative. Poisson Integral Formula. Poisson – Jensen Theorem. Jensen’s Formula. Exponent of Convergence of Zeros of an Entire Function. Picard and Borel’s Theorems for Entire Functions.

**Unit II:** Asymptotic values and Asymptotic Curves. Connection between Asymptotic and various Exceptional Values.

**Unit III:** Meromorphic Functions. Nevanlinna’s Characteristic Function. Cartan’s Identity and Convexity Theorems. Nevanlinna’s First and Second Fundamental Theorems. Order and Type of Meromorphic Function. Order of a Meromorphic Function and its Derivative. Relationship between  $T(r, f)$  and  $\log M(r, f)$  for an Entire Function. Basic Properties of  $T(r, f)$ .

**Unit IV:** Deficient Values and Relation between the Various Exceptional Values. Fundamental Inequality of Deficient Values. Some Applications of Nevanlinna’s Second Fundamental theorem. Functions taking the same values at the same points. Fix – points of Integral Functions.

**Title: Principles of Management**

**Subject Code: A1**

**Contact Hours: 45**

**Work load: 3 hours per week**

**Credit Points: 03**

**Evaluation:** Continuous Internal Assessment - - 25  
Semester End Examination - - 50

**Objective:** This course introduces modern concept of management to the students. This is a fundamental course where in students are exposed to principles and functions of management which help business firms to perform better and show improved results. **Pedagogy:** Lectures, Assignments, Projects, Practical Exercises and Seminars

**Module 1: Introduction to Management and Organization:**

Definition of Management, functions of Management, Managerial skills and organizational hierarchy, productivity, efficiency, and effectiveness. The evolution of management thought: F W Taylor, Henry Fayol, Elton Mayo and others. Approaches to management, The managerial functions: Planning, Organizing, Staffing, Leading and Controlling. Types of business organizations, organization culture, current trends & issues in management

**Module 2: Planning**

Managerial planning and its importance, types of plans, steps in planning, nature and objectives of planning, hierarchy of objectives, setting objectives, MBO. Nature and purpose of strategies – the strategic planning process, nature of decision making process, evaluation of alternatives, creativity and innovation, Brainstorming, Planning process

**Module 3: Organizing**

Meaning and purpose of organizing, organization structure, formal and informal organization, organizational levels and the span of management, factors determining effective span, organization structure and departmentation, line and staff authority relationships and decentralization, staffing concepts, approaches to manager development, performance management and performance appraisal, team evaluation approach.

**Module 4: Directing**

Human factors in managing, Motivation, theories of motivation & motivational techniques – McGregor's Theory x and Theory y, Maslow's hierarchy of needs theory, Alderfer's ERG theory, Herzberg's motivation-hygiene theory, etc., job enrichment, leadership, ingredients of leadership, leadership theories (approaches), leadership behavior and styles, types of leadership, communication, purpose of communication, communication process, types and norms of communication, communication barriers, guidelines for improving communication, listening and its importance in effective communication, electronic media in communication

**Module 5: Controlling**

**Title: Major Concurrent Project [MCP]****Subject Code: D02****[4 credits]****Workload: Phase – I: 2 days / week for 16 weeks****Phase – II: 30 days on site of organization and institute for guidance.****Evaluation:** Project Report – 50 marks

Project Viva -- 50 marks

**Preamble**

The Major Concurrent Project (MCP) is a fully practical oriented course which has been designed to give students indepth knowledge in their field of specialization. Major Concurrent Project (MCP) is an improved version of Summer Inplant Training (SIT), which we use to have at the end of II semester. In MCP, the student will have more scope to apply knowledge. In this MCP students are encouraged to explore concepts already dealt in the class and understand its application in the field. Unlike SIT (at the end of II semester) the student, while carrying Major Concurrent Project, is more focused and would be getting continuous guidance from the external as well as internal experts. The following note presents the broad guidelines of the Major Concurrent Project.

**Title of the Course**

Major Concurrent Project (MCP)

Duration

60 days in 2 phases. (Phase – I and Phase – II)

**PROCESS / GUIDELINES:**

- 1) Each student will select a project in the area of his/her specialization in an organization. (Organization could be any company (Public/Private/NGO/ Government organization/Department etc.)
- 2) The choice of the organization has to be made in consultation with the Institute. The Institute for this purpose should assign an internal faculty member who will act as the mentor throughout the Major Concurrent Project. The assignment of mentor and choice of organization should be made by the end of first week of semester.
- 3) The study conducted by the student will be a full time effort where he/she is required to attend the Industry/business/organization/NGO for over two full days in a week. The industry expert will act as the External guide and the student is required to submit attendance details every week to his mentor.
- 4) The Institute will provide three full days- (Every week Tuesday & Wednesday or Monday & Tuesday or any 2 consecutive week days for the students, to be with the Industry/ External Guides.
- 5) The proposal for the Major Concurrent Project (MCP) should be submitted by 1<sup>st</sup> week of start of IV semester to the institute. The institute should send a CD of all proposals to Chairman BOE, KUD by 2<sup>nd</sup> week of start of IV semester, which will ensure the registration of students for Major Concurrent Project. The Institute should also make

arrangement to upload these proposals on their website. Students should prepare these proposals in consultation with the Internal and External Guide.

6) The format for the proposal is as given below:

- Topic of the study (Major Concurrent Project)
- Need for the study (Stress on Need for study-current trends in the area)
- A review of earlier research studies conducted
- Objectives of the study
- Methodology
- Proposed outcomes and benefits of the study

- 7) Major Concurrent Project will be conducted in 2 phases as above. The completed MCP report is to be submitted by the end of one week after the last day of the III semester end examinations. Late submissions should not be entertained by the Institute in any case. A soft copy on a CD of all MCP reports is to be sent to Chairman BOE, KIMS, KUD immediately after the submission date.
- 8) There shall be a mid review of MCP, to be conducted immediately after the mid semester examinations.
- 9) Separate presentations for the organizations and the Institute have to be arranged in last week of the MCP duration as per mutual convenience.
- 10) There will be a project viva-voce conducted by Karnatak University, soon after the theory examinations. The panel of examiners will be similar to SIT and as approved by the Board of Studies.

### **Deliverables**

The students are required to deliver the following without any concessions as per the dates mentioned in the above process.

- 1) MCP proposal ... (by the end of 2<sup>nd</sup> week of start of IV semester)
- 2) Mid review presentation ...(Immediately after mid-semester examination)
- 3) Submission of MCP report ... (by the end of 1<sup>st</sup> week)  
(Soft copy + Hard copy- 3 no.s)
- 4) Presentation (for organization and the Institute) (Last week of the MCP duration)
- 5) Presentation for Viva-voce examination to be conducted by KUD.  
(as per K.U. Notification)

### **Format for Major Concurrent Project Reports**

The format for the Major Concurrent Project reports should be in the following manner.

Executive Summary	....	4 pages
Introduction of the study	....	5 pages
About the organization – Brief	....	5 pages
Objectives	....	1 page
Analysis and Findings	....	15 pages
Discussion	....	10 pages
Conclusion	....	8 pages
References	....	2 pages

In certain cases, students may change the format in consultation with his mentor and the External Guide. Enough care should be taken that the Major Concurrent Project report focuses the study undertaken by the student and its findings. The report should contain minimum 50 pages written using the following format:

- i) A-4 size paper (Executive Bond)
- ii) MS Word style with Times New Roman Font
- iii) Font size -12 for Text and 14 for headings
- iv) Portrait Paper settings with 1 inch margins on all the four sides.

**7.4** In those programmes that offer specialization courses, the students shall choose the prescribed number of Specialization Courses offered within the Department.

**7.5** Each Department shall offer Open Elective courses for students of other Departments. The students of a Department shall choose Open Elective courses from among those prescribed by the University and selected by the Department from time to time. P.G. Centers and affiliated colleges can offer those Open Elective Courses which are approved or prescribed by their Parent Department of the University. Such Open Elective courses shall be taught by qualified teachers approved by the University.

**7.6** The credits for each of the Compulsory Courses may vary from 2 to 4; for Specialization Course, from 2 to 4; and for Open Elective Course, from 2 to 4. Wherever project work/ field work/practical are involved in the course, the credits may extend to 6 or as otherwise provided by concerned programme.

**7.7** The minimum credits for P.G. Programme shall be 96. In the case of MCA, the minimum number of credits shall be 158 and in case of M.Sc. Computer Science the minimum credits are 116.

**7.8** The students shall undertake project/field work during the programme as a compulsory course or in lieu of Specialization Course or Open Elective Course if so specified by the concerned Board of Studies.

**7.9** The ratio between Compulsory, Specialization and Open Elective may differ from department to department.

**7.10** The detailed programme structure for Faculty of Science & Technology shall be as prescribed and shown in Annexure-I, Annexure –Ia & Annexure-Ib.

- 7.11** The Open Elective Courses generally will have practical component, unless otherwise specified by the respective Board of Studies. The number of students admitted to the course shall commensurate with the availability of infrastructure.

**8.0. Attendance**

- 8.1** Each course shall be taken as a unit for the purpose of calculating the attendance.
- 8.2** Each student shall sign the attendance register maintained by the Department for each course for every hour/unit of teaching/practical. The course teachers shall submit the monthly attendance report to the Chairperson of the Department who shall notify the same on the notice board of the Department during the second week of the subsequent month.
- 8.3** Marks shall be awarded to the student for attendance as specified in the regulations concerning evaluation.
- 8.4** A student shall be considered to have satisfied the required attendance for each course if he/she has attended not less than 75 % of the total number of instructional hours during the semester.
- 8.5** There is no provision for condoning shortage of attendance.
- 8.6** The students who do not satisfy the prescribed requirement of attendance shall not be eligible for the ensuing examination. Such candidates may seek admission afresh to the given semester.
- 8.7** Such of the candidates who have participated in State/National level Sports, NSS, NCC, Cultural activities and other related activities as stipulated under the existing regulations shall be considered for giving attendance for actual number of days utilized in such activities (including travel days) subject to the production of certificates from the relevant authorities within two weeks after the event.

**9.0 Examination**

- 9.1** There shall be an examination at the end of each semester. The odd semester examinations shall be conducted by the respective Departments/ P.G. Centers/ Colleges. The even semester examinations shall be conducted by the University.
- 9.1.1** Unless otherwise provided, there shall be semester-end examination of 3 hours duration for 75/100 marks; 1.5 hours for 50 marks and 2/4 hours for 35/75 marks practical examination.
- 9.1.2** Every student shall register for each semester-end examination as per the University Notification by submitting duly completed application form through the proper channel and shall also pay the fees prescribed.
- 9.1.3** The Office of the Registrar (Evaluation) shall allot the Register Number to the candidate at the 1st semester-end examination. That will be the Register Number of the candidate for all subsequent appearances at semester-end examinations.
- 9.1.4** The Answer scripts shall be in the safe custody of the University for a maximum period of six months from the date of announcement of results. These shall be disposed off after six months.
- 9.1.5** The programme under CBCS is a fully carry-over system. A candidate reappearing for either the odd or even semester examinations shall be permitted to take examinations as and when they are conducted (even semester examination in even semester and odd semester examination in odd semester).
- 9.1.6** Candidates who have failed, remained absent or opted for improvement in any course/ courses shall appear for such course/ courses in the two immediate successive examinations that are conducted. However, in the case of the candidates appearing for improvement of their marks, the marks secured in the previous examination shall be

retained, if the same is higher.

- 9.1.7** Candidates who desire to challenge the marks awarded to them, in the even semester-end examinations, may do so by submitting an application along with the prescribed fee to the Registrar (Evaluation) within 15 days from the announcement of results.

## **9.2. Odd Semester Examination**

- 9.2.1** There shall be a Board of Examiners to set, scrutinize and approve question papers.
- 9.2.2** The BOE shall scrutinize the question papers submitted in two sets by the paper setters and submit the same to the office of the Registrar (Evaluation).
- 9.2.3** The office of the Registrar Evaluation shall dispatch the question papers to the Departments/ P.G. Centers/ Colleges who shall conduct the Examinations according to the Schedule announced by the University.
- 9.2.4** The Chairperson of the Department/ Administrator of the P.G. Centre/ Principal of the College shall appoint one of their full time course teachers as Post Graduate Programme (PGP) Coordinator who shall conduct the examinations and arrange for evaluation of answer scripts.
- 9.2.5** Answer scripts shall be valued by the examiners appointed by the University. However, in those centers where an examiner for a particular course is not available, then the answer scripts of that course shall be dispatched to the office of the Registrar (Evaluation) who shall arrange for valuation of the same.
- 9.2.6** There shall be single valuation. The examiners (Internal or External) **shall** value the answer scripts and shall indicate the marks awarded to each question on the answer script.
- 9.2.7** The Marks List, a copy of the Examination Attendance Sheet and the sealed bundles of the answer scripts shall be dispatched by the PGP Coordinator to the Registrar (Evaluation)'s Office at the conclusion of the valuation at the respective centers.
- 9.2.8** The Office of the Registrar Evaluation shall process and announce the results.

## **9.3. Even Semester**

- 9.3.1** There shall be a Board of Examiners to set, scrutinize and approve question papers.
- 9.3.2** As far as practicable, it will be ensured that 50% of the paper setters and examiners are from other Universities/ Research Institutes.
- 9.3.3** Each answer script of the semester-end examination (theory and project report) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be the average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks, such a script shall be assessed by a third examiner. The marks allotted by the third examiner shall be averaged with nearer award of the two evaluations.  
Provided that in case the number of answer scripts to be referred to the third examiner in a course exceeds minimum of 5 or 20% of the total number of scripts, at the even semester-end examinations, such answer scripts shall be valued by the Board of Examiners on the date to be notified by the Chairperson of the Board of Examiners and the marks awarded by the Board shall be final.
- 9.3.4** Wherever dissertation/ project work is prescribed in the even semesters of a programme, the same shall be evaluated by both internal and external examiners. The evaluation shall be as prescribed by the concerned Board of Studies.
- 9.3.5** In case of programmes with practical examination details of maximum marks, credits or duration may vary from Department to Department as specified by the concerned Board of Studies.

#### **9.4. Evaluation**

**9.4.1** Each Course shall have two evaluation components - Internal Assessment (IA) and the Semester End Exams.

**9.4.2** The IA component in a course shall carry 25% / 30% / 50% and the Semester End Examination shall carry 75% / 70% / 50% respectively, as the case may be. Courses having 25% & 30% / 50% marks as internal assessment shall have 3 / 5 marks allotted to attendance. However, in case of project work, the distribution of marks for Internal Assessment and Examination shall be left to the discretion of the concerned BOS.

**9.4.3** Marks for attendance shall be awarded to the students according to the following table.

For courses carrying 25 % of marks for IA, the attendance marks shall be

<b>Attendance (in percentage)</b>	<b>Marks</b>
Above 90	3
Above 80 and up to 90	2
Above 75 and up to 80	1

**9.4.4** Internal Assessment (IA) shall be based on written tests, practical and seminars. However, the number of IA components per course per semester shall not be less than two.

**9.4.5** The IA marks list shall be notified on the Department Notice Board as and when the individual IA components are completed and the consolidated list shall be submitted to the Office of the Registrar Evaluation before the commencement of semester-end examination, or as directed by the University.

**9.4.6** The tests shall be written in a separately designated book supplied by the University which shall be open for inspection by the students after evaluation.

**9.4.7** There is no provision for seeking improvement of Internal Assessment marks.

**9.4.8** The IA records, pertaining to Semester Examination, shall be preserved by the department/Centers/Colleges for a period of one year from the date of semester examination. These records may be called by the University or a body constituted by the University as and when deemed necessary.

**9.4.9** The dissertation/project work viva-voce shall be conducted by an internal and external examiner.

#### **10.0. Maximum duration for completion of the Programme**

**10.1** A candidate admitted to a post graduate programme shall complete it within a period, which is double the duration of the programme from the date of admission.

**10.2** Whenever the syllabus is revised, the candidate reappearing shall be allowed for the examinations only according to the new syllabus.

#### **11.0 Declaration of Results**

**11.1** The minimum for a pass in each course shall be 40% of the total marks including both the IA and the semester-end examinations. Further, the candidate shall obtain at least 40% of the marks in the semester-end examination. There is no minimum for the IA marks.

**11.2** Candidates shall secure a minimum of 50% in aggregate in all courses of a programme in each semester to successfully complete the programme.

**11.3** Candidates shall earn the prescribed number of credits for the programme to qualify for the PG Degree.

**11.4** For the purpose of announcing the results, the aggregate of the marks secured by a candidate in all the semester examinations shall be taken into account. However,

Ranks shall not be awarded in case the candidate has not successfully completed each of the semesters in first attempt or has not completed the programme in the stipulated time (vide Regulation 5) or had applied for improvement of results.

**12.0 Marks, Credit Points, Grade Points, Grades and Grade Point Average**

**12.1** The grade points and the grade letters to candidates in each course shall be awarded as follows:

Percentage of marks	Grade Points	Grade Letter
75 and above, up to 100.00 %	7.50 to 10.00	A
60 and above but less than 75 %	6.00 and above but less than 7.5	B
50 and above but less than 60 %	5.00 and above but less than 6.0	C
40 and above but less than 50 %	4.00 and above but less than 5.00	D
less than 40.00 %	Less than 4.00	F

**12.2** Credit Point (CP): The Credit Point for each course shall be calculated by multiplying the grade point obtained by the credit of the course.

**12.3** The award of Grade Point Average (GPA) for any student is based on the performance in the whole semester. The student is awarded Grade Point Average for each semester based on the Total Credit Points obtained and the total number of credits opted for. The GPA is calculated by dividing the total credit points earned by the student in all the courses by the total number of credits of those courses of the semester.

**12.4** The Cumulative Grade Point Average (CGPA) shall be calculated by dividing the total number of credit points in all the semesters by the total number of credits in all the semesters. The CGPA to date shall be calculated by dividing the total number of credit points in all the semesters to date by the total number of credits in all the semesters to date.

CGPA for the I Semester =

Sum of the CP of the I Semester ÷ Sum of the credits of the I Semester

CGPA for the II Semester =

Sum of the CP of the I Sem + Sum of the CP of II Sem. ÷ Sum of the credits of the I Semester + II Semester

CGPA for the III and IV Semesters shall be computed accordingly.

**12.5** The Grade Card at each semester examination shall indicate the courses opted by the student, the credit for the course chosen by the student, the credit points obtained in each course, the grade letter and the grade point average. No class shall be awarded for each semester and the same would only be awarded at the end of all the semesters based on Cumulative Grade Point Average.

**12.6** Class shall be awarded to the successful candidates based on the Cumulative Grade Point Average (CGPA) as specified below:

Cumulative Grade Point Average (CGPA)	Class to be awarded
7.5 to 10.0	First class with Distinction
6.0 and above but below 7.5	First Class
5.0 and above but below 6.0	Second Class

**13. Miscellaneous:**

**a** Notwithstanding anything contained in these regulations, the semester system at Post-Graduate level is hereby repealed.

**CHOICE BASED CREDIT SYSTEM (CBCS) SYLLABUS**

**Preamble:**

Microorganisms are the most versatile and adaptable forms of life on earth, and have existed here for some 3.5 billion years. Indeed, for the first 2 billion years of their existence, prokaryote alone ruled the biosphere, colonizing every accessible ecological niche, from glacial ice to the hydrothermal vents of the deep-sea bottoms. Over their long period of global dominance, prokaryotes also changed the earth, transforming its anaerobic atmosphere to one rich in oxygen and generating massive amounts of organic compounds. Eventually, they created an environment suited to the maintenance of more complex forms of life. Today, the biochemistry and physiology of bacteria and other microorganisms provide a living record of several billion years worth of genetic responses to an ever-changing world. Thus, it is likely that representative of most of the microbial species that existed before humans are still here to be explored

The scope of microbial processes has enlarged tremendously during last 20 years or so. The efforts are made to explicit the potentiality of microbial systems in the development of industry, medicine, agriculture and forestry. Microorganisms possess an array of unique characteristics that render them as most ideal organisms for use in these sectors. Microorganisms are thus vital to economy of any country. The microbiology includes virology, bacteriology, mycology, phycology and protozoology. The careers in microbiology are challenging rewarding and varied. The critical mass of Biotechnological/ Microbiological companies in areas of Pharmaceutical, Agriculture, Sericulture, Health care system, food processing and Bioinformatics etc., to help us to sustain the growth of Biotechnological/Microbiological industry there by providing the manpower to biotechnology/microbiology industry to fulfill this objective. With the advent of recombinant DNA technology, researches in microbiology enabled scientists to produce transgenic fungi and bacteria with new genetic traits. Conceptually the way, one studies living organisms has changed the fundamental way as these seems to be very little difference between microbes and higher organisms at the center stage of revolution called Biotechnology. This is perhaps the reason for all students of biology to grasp the fundamentals of microbiology.

Microbiology impinges on almost every aspect of human life. This syllabus forms a solid foundation and provides a broad insight into the discipline for the students who intend to pursue microbiology at Post-Graduate level. Candidates of M.Sc. Microbiology, in addition to finding job opportunities in pharmaceutical, food and beverage industries can find opportunities in biotechnology, R & D programmes, teaching assignments and self-employment.

## **M.Sc. DEGREE IN MICROBIOLOGY**

The department offers two years M.Sc. course in Microbiology of four semesters with Choice Based Credit System (CBCS). Following are the Regulations governing the M.Sc. course in Microbiology offered by Karnatak University under Choice Based Credit System (KU-CBCS) from the academic year 2008-09.

### **Regulations Governing Post-Graduate Programme in the Faculty of Science and Technology Under Choice-Based Credit Scheme (CBCS)** *(Framed under Section 14(1) (c) of K.S.U. Act, 2000)*

#### **1.0 Title**

The regulations shall be called Karnatak University, Regulations Governing Postgraduate programmes under the “Choice Based Credit System” in Master of Science in Microbiology

#### **2.0 Commencement**

These Regulations shall come into forces from the academic year 2008-2009.

#### **3.0 Definitions**

- a. In these Regulations, unless otherwise provided: “Academic Council” means Academic Council of the University constituted according to the *Karnatak State Universities Act, 2000*.
- b. “Board of Studies” means P.G. Board of Studies of the University, Adhoc/Combined and Steering Committees of International Diploma Programme in the Discipline/subjects concerned.
- c. “Compulsory Course” means fundamental paper, which the student admitted to a Particular Post-Graduate Programme, should successfully complete to receive the Post Graduate Degree in the concerned subject.
- d. “Course Weightage” means number of credits assigned to a particular course.
- e. “Credit means the unit by which the course work is measured. One Credit means one hour of teaching work or two hours of practical work per week As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits are equal to 50 marks, 3 credits are equal to 75 marks and 4 credits are equal to 100 marks.
- f. “Cumulative Grade point Average (CCPA)” refers to the cumulative Grade Point Averages weighted across all the semesters and is carried forward from first semester to subsequent semesters.
- g. “Degree” means Post-Graduated Degree.
- h. “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each course by the candidate in both Internal Assessment and Semester-end Examinations
- i. “Grade Point Average (GPA)” refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester.
- j. “Open Elective Course” means a paper offered by a Department to the students of other Departments.
- k. “Post-Graduate Programme” means semesterised Master’s Degree Programmes excluding P.G. Diploma.

- l. “Specialization course means advanced paper offered by a Department that a student of that Department can opt as a special course
- m. “Student” means the student admitted to programmes under (k).
- n. “University” means Karnatak University, Dharwad

#### **4.0 Minimum Eligibility for Admission**

B.Sc. with any two biological science subjects of this University or of any other University recognized as equivalent there to by this University shall be eligible for admission provided they also satisfy the eligibility conditions like percentage of marks etc., as may be prescribed by the University and as per ordinance of the course.

The reservations, award of classes, attendance and evaluation are as per University regulations and statutes issued in this regard from time to time

**Intake capacity: Total intake of students for M.Sc. degree in Microbiology is 40 for the First semester and may vary as prescribed by the University**

#### **5.0 Duration of the programme**

The Durations of the study for the Post-Graduate programme shall extended over a period of two consecutive academic years, each academic year comprising two semesters, and each semester comprising sixteen weeks with a minimum of ninety working days.

However, the students, who discontinue the programme after one or more semesters due to extraordinary circumstances, are allowed to complete the programme with due approval from the Registrar. Candidate shall not register for any other regular course other than Diploma or Certificate courses being offered on the campus during the durations of P.G. Programme

#### **I. Medium of Instruction:**

The medium of instruction shall be English.

### **Programme Structure**

### **Scheme of Examinations:**

- i. The examination will be conducted at the end of the each semester
- ii. Each theory course will be have a question paper of 3 hours of duration and maximum marks of 75
- iii. Each practical course will have examination of 4 hours duration and maximum marks of 35

### **QUESTION PAPER PATTERN:**

#### **A) THEORY**

There shall be a total of three sections, Section-A and Section-B of 15 marks each and Section-C of 45 marks

- 1) Section-A shall have total 8 questions of 3 marks each and candidates should answer any five of them
- 2) Section-B shall have a total 5 questions of 5 marks of each and candidates should answer any three of them
- 3) Section-C shall have a total 5 questions of 15 marks of each and candidates should answer any three of them

**The same scheme is applicable to both core and elective theory papers**

## **B) PRACTICALS**

The mark allotted for practicals is 50, out of which 15 is for internal and 35 is for Semester final.

<b>The 35 marks is to be divided as follows</b>	<b>Marks</b>
1. Principle and Procedure writing	5
2. Experiments	20
3. Viva	5
4. Records	5

<b>Total</b>	<b>35 marks</b>
--------------	-----------------

**The same scheme is applicable to both core and elective practical papers**

## **C) PROJECT /DISSERTATION EVALUATION:**

1. Internal assessment	:	25 marks
2. Evaluation of dissertation	:	75 marks
3. Viva-voce	:	50 marks

**Total : 150 marks**

## **Award of Gold medals:**

The following gold medals will be awarded to the students for standing highest at the M.Sc. Microbiology Examination

- 1) Smt. Gangabai R Patil - Arishinagodi Gold Medal
- 2) Shri Vasudev Raghunath Kasbekar- Ankola Gold medal
- 3) Late Shri Murigeppa Chigateri – Gold Medal

## **Co-curricular Activities:**

Seminars, tutorials and group discussions will be conducted periodically. Study tours may also be arranged. However, these activities do not carry any marks.

## **Microbiology Society:**

The Department has an active “Microbiology Society” under the auspicious of which several invited lectures by distinguished scientists and professor are organized every year. All the faculty members, research students and M.Sc. students are the members of the Microbiology Society. Special lectures sponsored by University are also arranged in the department. The Microbiology society also organizes educational tours, sports and cultural activities for the staff and students of the department.

# M.Sc Microbiology

## PROGRAMME SPECIFIC OUTCOMES (PSOS)

After completion of this programme, the student will be able to:

1. Identify and classify the various microorganisms. Understand the logic of Microbiology, knowledge organization and its significance
2. Understand the information needs and requirements of different instruments. Learn various microbial techniques like Microscopy, Staining, Chromatography, Electrophoresis and Radio isotope techniques user communities and develop new services and facilities.
3. Learn the practical and managerial skills to handle the microorganisms. understand the physiology and metabolism of the organisms.
4. Gain the knowledge on computer applications using different softwares, Bioinformatics tools, and Biostatistical analysis and its applications in Molecular Biology and Genetic Engineering.
5. Effectively use Information concerning Application of Microbiology in the field of Environment, Agriculture, Plant Pathology, Food and Dairy Technology Microbial diversity as a source of innovations in biotechnology, Biotechnological approaches to improve microbial diversity and bio-productivity. will be dealt with in M. Sc. III Sem.
6. Contribute to microbiology as profession by identify diseases and their causative agents, Bioprocess Engineering and Fermentation Technology. Inculcating research aptitude, skills and other necessary soft skills.

### MICROBIOLOGY FIRST SEMESTER

#### MBCT 1.1 - GENERAL MICROBIOLOGY

##### **Course Outcomes**

<b>Paper Code and Name</b>		<b><u>MBCT 1.1 - GENERAL MICROBIOLOGY</u></b>
<b>COURSE OUTCOMES (COs)</b>		
After completing this paper, the students will be able to:		
CO 1	Identify and classify the various microorganisms	
CO 2	Use various microbial techniques like Microscopy, Staining, Chromatography, Electrophoresis and Radio isotope techniques	
CO 3	understand the physiology and metabolism of the organisms.	
CO 4	Learn about the different groups of Microorganisms	

<b>Particulars</b>
--------------------

<b>Unit- 1 History and Scope of Microbiology:</b>	
Introduction to Microbiology, Spontaneous generation theory, Contributions of Antony van Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Edward Jenner and Alexander Flemming. Beneficial and harmful microorganisms, Introduction to branches of Microbiology : a) Air, b) Water, c) Sewage, d) Soil, e) Dairy, f) Food, g) Medical, h) Industrial, i) Biotechnology j) Geo-microbiology	<b>09 Hrs</b>
<b>Unit – 2 Prokaryotic and Eukaryotic cells:</b>	
Introduction and evolution of Prokaryotic and Eukaryotic cells, Structural organization of Prokaryotic and Eukaryotic cells, Major groups of Microorganisms – Viruses, Bacteria, Algae, Fungi and Protozoa.	<b>08 Hrs</b>
<b>Unit -3 Viruses:</b>	
History and development of virology; Types and classification of viruses; Structural organization of viruses with examples: Capsids, Nucleic acids, Envelope; Structure of T4 bacteriophage, TMV, HIV. Brief introduction about Viroids, Virions and Prions.	<b>07 Hrs</b>
<b>Unit 4 Bacteria:</b>	
Morphology of Bacteria size, shape, arrangements, Structure and functions of Cell wall, Cell membrane, Capsule and slime layer, Flagella, Pili, Nuclear material, Mesosome, Ribosome; General Characteristics of bacteria Spirochetes, <i>Rickettsia</i> , <i>Chlamydia</i> , <i>Mycoplasma</i> , <i>Cyanobacteria</i> , <i>Actinomyces</i> , <i>Archeobacteria</i> ; Growth and reproduction of bacteria- effect of nutritional and environmental factors on bacterial growth	<b>09 Hrs</b>
<b>Unit 5 Fungi:</b>	
History and scope of Mycology; General Characteristics of Fungi ; Classification and Identification of fungi- Basidiomycetes, Ascomycetes, Deuteromycetes, Oomycetes, Hypochytriomycetes and Symbiotic fungi (Lichens); Growth and reproduction of fungi- effect of nutritional and environmental factors on fungal growth.	<b>07 Hrs</b>
<b>Unit 6 Algae:</b>	
History and development of Algae; General Characteristics of Algae: Classification, Growth and reproduction of Algae; Cultivation of algae, media, photo-bioreactors, Economic importance of Algae: <i>Spirulina</i> , <i>Chlorella</i> , <i>Nostoc</i> and <i>Anabaena</i> .	<b>05 Hrs</b>
<b>Unit 7 Protozoa:</b>	
History of Protozoa; Classification, Growth and reproduction of Protozoa. General Characteristics of Protozoa: <i>Paramecium</i> , <i>Amoeba</i> , <i>Euglena</i> , <i>Trypanosoma</i> and <i>Plasmodium</i> .	<b>05 Hrs</b>
<b>PRACTICALS</b>	
<b>MB CP 1.5 Based on MB CT 1.1 - General Microbiology</b>	
<ol style="list-style-type: none"> <li>1. Safety Measures in Microbiology laboratory.</li> <li>2. Preparation of media and stains for microbial work.</li> <li>3. Study of Instruments – Autoclave, Hot air Oven, Incubator, Laminar airflow, Centrifuge, pH meter, Colorimeter, Spectrophotometer.</li> <li>4. Isolation of different groups of microorganisms (Algae, Fungi, Bacteria and Protozoa) by various methods.</li> <li>5. Calibration of Microscope and Micrometry.</li> <li>6. Study of motility of cells by hanging drop technique.</li> <li>7. Study and Staining of different groups of microorganisms- Algae, Fungi, Bacteria and Protozoa.</li> </ol>	

8. Camera Lucida.	
9. Effect Temperature and pH on growth curve of bacteria ( <i>E.coli</i> ).	
10. Effect of antibiotics on bacterial growth – paper disc and cup plate method.

### **MB CT 1.2 – MICROBIAL DIVERSITY AND TAXONOMY**

#### **Course Outcome**

<b>Paper Code and Name</b>	<b>MB CT 1.2 – MICROBIAL DIVERSITY AND TAXONOMY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Identify and classify the various microorganisms
CO 2	understand the concepts and scope of microbial taxonomy and diversity
CO 3	understand the physiology and metabolism of the organisms.
CO 4	skills and have a Biotechnological approach towards Ecology, diversity and Bioproductivity

<b>Particulars</b>	<b>No of Hours Total (50 Hours)</b>
<b>Unit 1 Microbial Taxonomy:</b>	
Taxonomic ranks, nomenclature rules, identification, Classification systems, microbial diversity and evolution	<b>06 Hrs</b>
<b>Unit 2 Classical taxonomy:</b>	
Haeckle's three kingdom concepts, Whittaker's five-kingdom concept, three domain concept of Carl Woese criteria used for classification of microorganisms, Classification according to Bergey's manual of systematic bacteriology.	<b>10 Hrs</b>
<b>Unit 3 Recent trends in microbial taxonomy:</b>	
a. Chemo-taxonomy – Cell wall components, lipid composition, isoprenoid sequences, b. Cytochrome composition, amino acids, sequences of proteins, protein	<b>08 Hrs</b>

profile, DNA c. DNA homology, RNA homology, G+C ratio, RNA sequencing. d. Numerical taxonomy. e. Serological Methods. Molecular methods in taxonomy.	
<b>Unit 4 Microbial Diversity:</b>	
Concepts and scope, methods used in the study of microbial taxonomy and diversity	<b>04 Hrs</b>
<b>Unit 5 Diversity of microorganisms</b>	
Diversity of microorganisms at different levels of Assessment and measure of microbial diversity, Factors influencing microbial diversity	<b>04 Hrs</b>
<b>Unit 6 Microbial interaction</b>	
<b>Microbial interaction-</b> Basic principles and types, intra and inter-specific illustrations	<b>04 Hrs</b>
<b>Unit 7 Ecology of microbial cells</b>	
Ecology of microbial cells and population ecology, Distribution and significance of Viruses, Bacteria, Fungi, Algae and Protozoa	<b>10 Hrs</b>
<b>Unit 8 Microbial diversity</b>	
Microbial diversity as a source of innovations in biotechnology, Biotechnological approaches to improve microbial diversity and bio-productivity.	<b>04 Hrs</b>
<b>PRACTICALS</b>	
<b>MBCP 1.6 Based on MBCT-1.2 Microbial Diversity and Taxonomy</b>	
1. Isolation and Enumeration of Bacteria, Actinomycetes, Fungi and Yeasts from soil, Water and air Samples using selective media. 2. Isolation and Enumeration of Microorganisms in polluted environments. 3. Isolation and Enumeration of Microorganisms in Extreme environments. 4. Study of Biochemical tests-(IMVIC test, Urease test, Citrate utilization test, Gelatin Hydrolysis test, Starch hydrolysis test, Cellulose degradation test, Catalase test, Oxidase test, Coagulase test, H <sub>2</sub> S Production test, Nitrate Reduction, Optochin Sensitivity test, Esculin Hydrolysis test) 5. Microbial taxonomy- DNA Homology test and Serological Methods 6. Observation of permanent slides a) Algae: <i>Cyanobacteria Spirulina, Anabaena Chlorella, Scenedesmus, Spirogyra, Diatoms and Gracilaria.</i> b) Fungi: <i>Pythium, Rhizopus, Saccharomyces, Penicillium, Aspergillus, Fusarium, Agaricus.</i> c) Virus infected Plant materials TMV/Bean mosaic. d) Protozoa: <i>Euglena, Paramaecium, Entamoeba histolytica</i>

### **MB CT 1.3- MICROBIAL TECHNIQUES**

#### **Course Outcomes**

<b>Paper Code and Name</b>	<b>MB CT 1.3- MICROBIAL TECHNIQUES</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Identify different types of microscope and specimen preparation accordingly
CO 2	Acquainted with physical and chemical methods of sterilization
CO 3	Understand the methods of isolation and culture of microorganisms
CO 4	Aware of types of stains and various staining techniques
CO 5	Taught the principles types, and applications of chromatography, electrophoresis radioisotopic techniques

<b>Particulars</b>	<b>No of Hours Total (50 Hours)</b>
<b>Unit 1 Microscopy &amp; specimen preparation</b>	
Microscopy –Basic principles and applications of light, phase, fluorescent, Bright field, Dark field and electron microscopes (TEM & SEM), Confocal microscopy, Scanning probe microscopy, Micrometry. <b>Sample preparations:</b> fixing of specimens, preparation of blocks, microtome, cytometer and flow-cytometer.	<b>08 Hrs</b>
<b>Unit – 2 Basic principles and methods of sterilization:</b>	
Physical methods: Dry and moist heat, Filtration, Radiation, Chemical methods: Phenols, Alcohols, Halogens, Heavy metals, Aldehydes, Quaternary ammonium compounds, disinfectants and gases	<b>03 Hrs</b>
<b>Unit -3 Microbiological media:</b>	
Definition, components, types and preparation, enrichment and preservation of media, pH and buffers	<b>02 Hrs</b>
<b>Unit 4 Isolation of microbial cultures:</b>	
Serial dilution, Inoculation techniques: Spread plate, Streak plate, Pour plate, Micromanipulator method, Colony morphology and characteristics of cultures. Maintenance and preservation of pure cultures, Culture collection centers- National and International	<b>05 Hrs</b>
<b>Unit 5 Stains and Staining Techniques:</b>	
Nature of stains, Principle, Mechanism, Types and Method of Staining: Simple, negative, differential and structural staining	<b>03 Hrs</b>

<b>Unit 6 Measurement of Microbial growth:</b>	
Direct method, direct microscopic plate, Standard plate count, Filtration, MPN, Indirect method, Turbidity, Metabolic activity & Dry weight	<b>03 Hrs</b>
<b>Unit 7 Analysis of metagenomics:</b>	
They will know skills and have a Metagenomics, Culture independent analysis of microbes, Phospholipids, Fatty acids analysis, Fluorescent in situ hybridization (FISH), Genomic <i>in situ</i> Hybridization (GISH).	<b>03 Hrs</b>
<b>Unit 8 Chromatographic techniques:</b>	
<b>Chromatographic techniques:</b> <ol style="list-style-type: none"> <li>Principles, types and applications of Chromatography</li> <li>Gas Chromatography, GC-MS, LC – MS / MS, MALDI TOF mass spectrometer</li> <li>Ion Exchange Chromatography, gel permeation, Affinity and reverse phase chromatography</li> <li>HPLC, FPLC&amp; UPLC</li> </ol>	<b>08 Hrs</b>
<b>Unit 9 Electrophoresis:</b>	
Types of electrophoresis, Paper and Gel electrophoresis (Starch, Acrylamide and Agarose), Capillary, Disc and Slab, Vertical gel electrophoresis (SDS-PAGE, native PAGE, Isoelectrofocussing and 2-D gel, Immunoelectrophoresis, Pulse-field Gel electrophoresis (PFGE), Blotting of nucleic acids and proteins	<b>06 Hrs</b>
<b>Unit 10 Spectroscopy:</b>	
Spectroscopy: Principle and applications of spectrophotometer- UV/visible, fluorescence, circular dichroism, Raman spectra, NMR and ESR spectroscopy, Mass Spectrometry, X-ray diffraction and crystallography	<b>07 Hrs</b>
<b>Unit 11 Radio isotopic Techniques:</b>	
<ol style="list-style-type: none"> <li>Nature of radioactivity and general principles of radio-isotopic techniques</li> <li>Methods of detection of radioactivity – gas ionization (GM counter), excitation (scintillation) and exposure of photographic emulsions (autoradiography).</li> <li>Methods of using radioisotopes – radioisotope tracer technique, isotope dilution assay and other methods</li> </ol>	<b>02 Hrs</b>

### **MB CT 1.4 –MICROBIAL PHYSIOLOGY AND METABOLISM**

#### **Course Outcome**

<b>Paper Code and Name</b>	<b>MB CT 1.3- MICROBIAL TECHNIQUES</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Define the Structure, principles, types and uses of Enzymes.
CO 2	Understand the Concept of photosynthesis and associated pigments in microbes.
CO 3	Understand the nutrition in microorganisms, know the methods and mechanism of respiration in bacteria
CO 4	Understand carbohydrate, lipid, neucleotide, protein and amino acid metabolism

<b>Particulars</b>	<b>No of Hours</b>
--------------------	--------------------

	<b>Total (50 Hours)</b>
<b>Unit 1 Enzymes:</b>	
Definition, Structure, enzymes as biocatalysts properties and classification, specificity, active sites, coenzymes: Activators and inhibitors, activity unit, isozymes, enzyme kinetics (negative and positive comparatively); Michaelis–Menton equation for simple enzymes. Determination of kinetic parameters ( $K_M$ , $V_{max}$ , $K_I$ ), multi-step reactions and rare limiting steps, enzyme inhibition, allosterism, Kinetic analysis of allosteric enzymes principles of allosteric regulation, Ribozyme and abzyme	<b>06 Hrs</b>
<b>Unit – 2 Microbial Nutrition and Factors::</b>	
Modes of nutritional uptake (Entry of nutrition in the cell, passive diffusion, facilitated diffusion and active transport, Utilization of nutrients, Microbial growth – Growth Curves, Phages of growth, factors influencing growth, chemostat, turbidostat, and measurement of growth, continuous and synchronous growth and growth kinetics. Classification of bacteria on the basis of growth supporting environmental factors such as oxygen, temperature, pH, osmotic pressure, salt and hydrostatic pressure.	<b>06 Hrs</b>
<b>Unit -3 Microbial Photosynthesis:</b>	
Concept of photosynthesis and associated pigments in microbes; photosynthetic apparatus in prokaryotes and eukaryotes, anoxygenic and oxygenic photosynthesis, light and dark reaction; photorespiration and its significance, Effect of light, temperature, pH and CO <sub>2</sub> concentration on photosynthesis, measurement of net photosynthetic yield.	
<b>Unit 4 Bacterial Respiration:</b>	
Bacterial aerobic respiration, components of electron transport chain, free energy changes and electron transport, oxidative phosphorylation and theories of ATP formation, inhibition of electron transport chain and Photophosphorylation, Electron transport chain in heterotrophic and chemo-lithotrophic bacteria. Bacterial anaerobic respiration: Nitrate, carbonate and sulfate as electron acceptors, electron transport chains in anaerobic bacteria, catalase, super oxide dismutase, mechanism of oxygen toxicity.	<b>08 Hrs</b>
<b>Unit 5 Nitrogen metabolism:</b>	
Nitrogen cycle, Ammonification, nitrification, denitrification and nitrogen fixation, Nitrogenase enzyme, physiology of nitrogen fixation in symbiotic and free living bacteria, Genetics of nitrogen fixation, acetylene reduction assay.	<b>03 Hrs</b>
<b>Unit 6 Microbial stress responses:</b>	
Osmotic stress and osmoregulation, aerobic and anaerobic transitions, Oxidative stress, pH stress and acid tolerance, thermal stress and heat shock response, nutrient stress and starvation stress. Fermentative pathways in specific group of microbes: alcoholic, lactic acid, formic, mixed, propionic, butyric, butanol, butanediol fermentation.	<b>04 Hrs</b>
<b>Unit 7 Carbohydrate Metabolism:</b>	
Characteristics and Classification of carbohydrates. Glycolysis, TCA cycle, Glyoxylate pathway, Pentose phosphate pathway, Special microbial roots for metabolism of monosaccharaides, Gluconeogenesis, Glycogenolysis and Glycogenesis, Substrate level Phosphorylation, Pasteur effect.	<b>05 Hrs</b>
<b>Unit 8 Lipid metabolism:</b>	

Characteristics and classification of lipids, $\beta$ -oxidation, extra-mitochondrial fatty acid synthesis, microsomal chain elongation, metabolism of acyl glycerols and sphingolipids, biosynthesis of phospholipids, Ketosis, Ketoacidosis, Ketogenesis, Ketolysis, metabolism of cholesterol.	<b>04 Hrs</b>
<b>Unit 9 Protein and Amino acid metabolism:</b>	
Characteristics and classification of proteins and amino acids, Essential and non-essential amino acids, Transamination, Deamination decarboxylation, $\text{NH}_3$ transport, Urea formation, Significance and regulation of Urea synthesis, Metabolism of aromatic amino acids – tyrosine, tryptophan, phenyl alanine, metabolism of Sulphur containing amino acids, L-Methionine, L-cysteine, C-L cystine and their metabolic role. Metabolism of other amino acids like glycine, serine and Histidine	<b>04 Hrs</b>
<b>Unit 10 Nucleotide metabolism:</b>	
Characteristics and structure of Nucleic acids Biosynthesis of Purines & Pyrimidines, Regulation of nucleotide synthesis, catabolism of nucleotides.	<b>07 Hrs</b>
<b>PRACTICALS</b>	
<b>MB CP 1.8 based on MB CT.1.4 - Microbial Physiology and Metabolism</b>

## **MICROBIOLOGY SECOND SEMESTER SYLLABUS**

### **MBCT 2.1 – MICROBIAL GENETICS AND MOLECULAR BIOLOGY**

#### **Course Outcomes**

Paper Code and Name	MBCT 2.1 – MICROBIAL GENETICS AND MOLECULAR BIOLOGY
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Understand the structure and genome organization in microorganisms
CO 2	Understand the Structure and types of DNA and its replication.
CO 3	Know the process, mechanism and significance of transcription, Translation, mutation and recombination.
CO 4	Learn fungal, algal and viral genetics

Particulars	No of Hours Total (50 Hours)
<b>Unit 1 Concepts in Microbial Genetics:</b>	
History and developments of Microbial genetics, Microbes as Genetic Tools for Basic and Applied Genetic studies. Generalized reproductive cycles of microbes (Bacteria, Viruses, <i>Neurospora</i> , <i>Chlamydomonas</i> , <i>Saccharomyces</i> , <i>Acetabularia</i> , <i>Mycoplasma</i> )	<b>05 Hrs</b>
<b>Unit – 2 Organization of genetic material:</b>	

Genome organization in viruses, bacteria and eukaryotes. Interrupted genes, gene clusters, structure of nucleosome, chromatin and chromosome.	<b>06 Hrs</b>
<b>Unit -3 Structural Polymorphism of DNA</b>	
: DNA Structure A, B, and Z DNA, Super coiled DNA and DNA Binding Proteins, <b>DNA viruses:</b> Double stranded (Pox virus and SV40 virus) and single stranded DNA viruses. <b>Replication:</b> Rolling circle replication, semi-conservative replication, replication fork-leading and lagging strands, enzymes involved at different steps of replication. Folded fiber model of <i>E. coli</i> chromosome, split genes, overlapping genes, DNA amplification, the law of DNA constancy and C- value paradox. Structure, types and replication of RNA virus	<b>04 Hrs</b>
<b>Unit 4 Transcription:</b>	
DNA Binding Proteins, Classes of RNA Molecules and RNA Polymerases. Prokaryotic and Eukaryotic transcription, Post transcription modification – mRNA processing, 5'capping, 3'polyadenylation, Splicing mechanisms, rRNA and tRNA processing.	<b>04 Hrs</b>
<b>Unit 5 Translation:</b>	
Genetic code and wobble hypothesis, tRNA and the Aminoacyl-tRNA-synthetase, Clover leaf structure of tRNA prokaryotic and Eukaryotic translation machinery, Ribosomes, Mechanism of prokaryotic and eukaryotic transcription, Post translational modification of proteins, inhibitors of protein translation	<b>04 Hrs</b>
<b>Unit 6 Gene as a Unit of Mutation:</b>	
Mutation, mutagens and types of Mutations, Molecular basis of spontaneous and induced mutations and their role in evolution. Transposon and site directed mutagenesis, environmental mutagenesis and toxicity testing, Hot spots, AME's Test, Comet Assay.	<b>05 Hrs</b>
<b>Unit 7 Molecular Genetic Recombination:</b>	
In Bacteriophages and <i>E. coli</i> , Synapsis of homologous duplex, breakages and reunion, role of RecA in recombination. Transduction- generalized and specialized. Transformation and conjugation, legitimate and illegitimate recombination, gene conversion, overview of bacterial genetic map	<b>09 Hrs</b>
<b>Fungal Algal and Viral Genetics:</b>	
<b>Fungal Genetics:</b> <i>Neurospora</i> - Tetrad analysis and linkage detection - 2 point and 3 point crosses, chromatid and chiasma interference, Mitotic recombination in <i>Neurospora</i> and <i>Aspergillus</i> , Alternation of generation in <i>Neurospora crassa</i> and yeast. <b>Algal Genetics:</b> <i>Chlamydomonas</i> - unordered tetrad analysis, Nucleocytoplasmic interactions and gene expression in <i>Acetabularia</i> . Extranuclear (Cytoplasmic) inheritance. <b>Viral Genetics:</b> Lytic and Lysogenic cycles, Phage Phenotypes, Phenotypic Mixing, and Recombination in viruses: Mapping of rII loci	<b>09 Hrs</b>
<b>PRACTICALS</b>	
<b>Mb CP 2.5 based on MB CT .2.1 - Microbial Genetics and Molecular Biology</b>	

1. Isolation and estimation of DNA, RNA and plasmids.
2. Inheritance and pedigree analysis of simple Mendelian traits.
3. Induction and study of physical and chemical mutagens in bacteria/fungi
4. Study of mitosis direct method
5. Study of meiosis
6. RFLP and RAPD analysis.
7. Isolation of drug resistant mutants
8. Study of mutagenic effect and Induction of mutation in yeast/ bacteria by chemical/radiation method
9. Plasmid Curing in bacteria
10. Transformation and selection of transformants
11. Conjugation and Gene Mapping in *E.coli*
12. Isolation of bacteriophages and Phage titration
13. Restriction digestion of DNA
14. Study of replica plating technique

<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Understand the Scope and importance of Genetic engineering and application
CO 2	Have hands on training on enzymes used as tools in genetic engineering
CO 3	Know the significance of cDNA, screening techniques and Genomic DNA Librar
CO 4	Understand Labelling, Transformation and Transfection, techniques, Antisense and Ribozyme technology
CO 5	<b>Apply Genetic engineering and rDNA technology tools and techniques required</b>

<b>Particulars</b>	<b>No of Hours Total (50 Hours)</b>
<b>Unit 1 Introduction to Genetic Engineering</b>	
: Scope and importance of Genetic engineering.	<b>02 Hrs</b>
<b>Unit – 2 Cloning Vectors</b>	

: Brief account of naturally occurring plasmids (Conjugative and Non conjugative plasmids, degradative plasmids, Resistance plasmids, Fertility plasmids, Col-Plasmids), artificial plasmids (pBR322, pUC vectors, Ti and Ri plasmids), Bacteriophages, Phagemids, Cosmids, Fosmids, Artificial chromosomes ( BAC's, YAC's), Shuttle vectors, expression vectors, M13 derived vectors and Viral vectors ( SV40 and Bovine Papilloma Virus).	<b>08 Hrs</b>
<b>Unit -3 Tools of Genetic Engineering:</b>	
Restriction endonucleases- nomenclature and types, recognition sequences and mechanism of action. DNA Modification enzymes (nucleases, kinases, Alkaline-phosphatase, Klenow polymerase, Lambda-Exonuclease and Exonuclease-III) and ligases- types and mechanism of action.	<b>05 Hrs</b>
<b>Unit 4 Cloning and Construction of gene Libraries:</b>	
cDNA library- isolation and purification of mRNA, Synthesis of cDNA, cloning of cDNA in to plasmids and phage vectors, <b>Genomic DNA Library:</b> Isolation and purification of Genomic and Plasmid DNA, preparation of DNA fragments for cloning, Construction of genomic DNA library with different vectors and screening techniques	<b>05 Hrs</b>
<b>Unit 5 Selection, Screening and Analysis of Recombinants:</b>	
Blotting Techniques- Southern Blotting, Northern Blotting, Western Blotting and DOT Blot. Nucleic acid hybridization (Colony Hybridization and Plaque Hybridization), Immunological methods and <i>In vitro</i> Translation. Chromosome walking, <b>Gel Electrophoresis:</b> Agarose gel Electrophoresis, PAGE and PFGE	<b>06 Hrs</b>
<b>Unit 6 Labeling and Detection Techniques</b>	
Labeling of DNA, RNA and Proteins (Radioactive and non-radioactive isotopes). DNA Sequencing (Chemical and Enzymatic method).	<b>04 Hrs</b>
<b>Unit 7 Transformation Techniques:</b>	
Transformation and Transfection techniques, Preparation of competent cells of bacteria, chemical methods- calcium phosphate precipitation method and liposome mediated method, Physical methods-Electroporation and Gene gun method. Biological methods-Agrobacterium mediated transformation, Co-cultivation methods, Chloroplast transformation, method of DNA transfer to yeast, mammalian and plant cells.	<b>06 Hrs</b>
<b>Unit 8 Polymerase chain Reaction</b>	
Methodology, types and applications.	<b>03 Hrs</b>
<b>Unit 9 Chemical Synthesis of genes:</b>	
Methods (Phosphodiester, and Phosphotriester methods principle and strategies), Oligonucleotide synthesis and application, synthesis of complete gene.	<b>04 Hrs</b>
<b>Unit 10 Antisense and Ribozyme technology:</b>	
Molecular mechanism of antisense molecules, inhibition of splicing poly-adenylation and translation, disruption of RNA structure and capping Biochemistry of Ribozyme, hammer head, hairpin and other Ribozymes, strategies for designing Ribozymes, application of antisense and Ribozymes technologies.	<b>03 Hrs</b>
<b>Unit 11 Applications of Genetic engineering and rDNA technology</b>	
: Transgenic plants (disease resistant, weedicide resistant, frost resistant, halotolerant and pest resistant) production of growth hormones, interferon, insulin, recombinant vaccines, gene therapy, anti-sense RNA technology RNA; requirement of recombinant molecules in health, pharmaceuticals, agriculture and industrial sectors, research labs.	<b>04 Hrs</b>

### **MBET 2.4 Fundamentals and applications of Microbiology**

#### **Course Outcome**

<b>Paper Code and Name</b>		<b>MBET 2.4 Fundamentals and applications of Microbiology</b>
<b>COURSE OUTCOMES (COs)</b>		
After completing this paper, the students will be able to:		
CO 1	Know the history and contributions of various pioneers and scientists in the field of Microbiology.	
CO 2	Understand the differences and comparison between the prokaryotes and the eukaryotic microorganisms	
CO 3	Industrial production of Alcohol, Organic acids, Solvent, Antibiotics Single cell proteins (SCP) Vitamins (Riboflavin) Enzymes, Recombinant protein	
CO 4	Understand pathogenesis, Clinical conditions, laboratory diagnosis, epidemiology, Prophylaxis and treatment of the diseases caused by microorganisms.	
CO 5	Perform Specimen collections, handling, transport, identification of pathogens from specimens and hospital management	

<b>Particulars</b>	<b>No of Hours ( 50 Hrs)</b>
<b>Unit 1 Introduction to Microbiology:</b>	
Contributions of Antony van Leeuwenhoek, Louis Pasteur, Robert Koch, Joseph Lister, Edward Jenner, Alexander Flemming. Beneficial and harmful microorganisms, Introduction to branches of Microbiology: a) Air, b) Water, c) Sewage, d) Soil, e) Dairy, f) Food, g) Medical, h) Industrial, i) Biotechnology j) Geomicrobiology.	<b>09 Hrs</b>
<b>Unit – 2 Prokaryotic and Eukaryotic cells:</b>	
Introduction and evolution of Prokaryotic and Eukaryotic cells, Structural organization of Prokaryotic and Eukaryotic cell, Major groups of Microorganisms – Viruses, Bacteria, Algae, Fungi and Protozoa.	<b>08 Hrs</b>
<b>Unit -3 Industrial microbiology:</b>	
Industrial production of Alcohol (Ethanol), Wine, Beer, Organic acids (Citric, acetic, Lactic and Gluconic acid) Solvent (Glycerol Acetone, Butanol), Antibiotics (Penicillin, streptomycin, tetracycline) Amino acids (lysine, glutamic acid) Single cell proteins (SCP) Vitamins (Riboflavin) Enzymes (Amylase, lactase, protease), Hydrocarbons – Biodegradable plastic – Polyhydroxyalkanoates (butyrate, propionate etc), recombinant protein	<b>11 Hrs</b>

(hepatitis – B vaccine)	
<b>Unit 4 Microbial diseases:</b>	
Pathogenesis, Clinical conditions, laboratory diagnosis, epidemiology, Prophylaxis and treatment of the following diseases. a) Virus – Measles, Mumps, Influenza, Yellow fever, HIV, Herpes, Rabies, Hepatitis, Polio myelitis, Dengue fever, Japanese Encephalitis, KFD, Rhinovirus, CJD and Kuru. b) Bacteria – Diphtheria, Typhoid, Gonorrhea, Syphilis, Plague, Leprosy, Tuberculosis, Gas gangrene, Tetanus, Septicemia, Cholera and Brucellosis. c) Fungi – <i>Candidiasis</i> , <i>Mycetoma</i> , <i>Chromomycosis</i> , <i>Sporotrichosis</i> , <i>Cryptococcosis</i> , <i>Blastomycosis</i> , <i>Coccidiomycosis</i> and <i>Histoplasmosis</i> . d) Protozoa– Amoebiasis, Giardiasis, Malaria, <i>Leishmaniasis</i> and <i>Trypanosomiasis</i> . e) Dental Infections – Dental Plaque, Dental carries and periodontal diseases. f) Nosocomial Infections – Bacterimia, Burn wounds, surgical site infections, Urinary tract and miscellaneous infections.	<b>14 Hrs</b>
<b>Unit 5 Clinical Microbiology:</b>	
Specimen collections, handling, transport, identification of pathogens from specimen, growth and biochemical characteristics, Rapid methods of identification, Immunological techniques, Bacteriophage typing, molecular measures (DNA probes, Restriction endonucleases, DNA Finger printing, RIA, ELISA, PCR) and susceptibility testing. A brief account on hospital management	<b>09 Hrs</b>
<b>PRACTICALS</b>	
<b>MBCP 2.8 based on MBET-2.4-Fundamentals and Applications of Microbiology</b>	
1. Safety Measures in Microbiology laboratory 2. Study of Instruments – Autoclave, Hot air Oven, Incubator, Laminar airflow, Centrifuge, pH meter, Colorimeter, Spectrophotometer. 3. Isolation and Study of Different groups of Microorganisms- Algae, Fungi, Bacteria and Protozoa 4. Micrometry 5. Camera Lucida 6. Study of motility of cells by hanging drop technique 7. Effect of growth curve of bacteria ( <i>E.coli</i> ) 8. Effect of temperature on the growth of microorganisms 9. Effect of pH on the growth of microorganisms Effect of antibiotics on bacterial growth – paper disc and cup plate method

#### **MB CT 3.1 ENVIRONMENTAL MICROBIOLOGY**

##### **Course Outcome**

<b>Paper Code and Name</b>		<b><u>MB CT 3.1 ENVIRONMENTAL MICROBIOLOGY</u></b>
<b>COURSE OUTCOMES (COs)</b>		
After completing this paper, the students will be able to:		
CO 1	Know the history, scope of environment and environmental pollution.	
CO 2	Understand the Sources and characteristics of air pollutants, health hazards and control measures of air, soil, water pollution and waste management.	
CO 3	Concepts and principles of bioremediation, biodeterioration biodegradation, biomining, and bioleaching.	
CO 4	Provide Environmental Education regarding Agrochemicals, Botanicals of Global Warming, ozone depletion, Greenhouse gas effect, acid rains & their impact and Biotechnological approaches in the environment.	

<b>Particulars</b>		<b>No of Hours (Hrs)</b>
<b>Unit 1: Environment and environmental pollution</b>		
Meaning, scope, concept of Environment and environmental pollution		<b>02 Hrs</b>
<b>Unit – 2 Aerobiology:</b>		
Air sampling techniques, Identification of Airborne bioparticles, Sources and characteristics of air pollutants, health hazards due to air pollution. Air borne diseases and control measures of air pollution		<b>06 Hrs</b>
<b>Unit -3 Soil Microbiology</b>		
Classification based on physical and chemical characteristics, Microorganisms in various soil types, soil pollution –sources and characteristics of soil pollutants, health hazards due to soil pollution, control measures of soil pollution-interaction among soil microbes-mutualism, commensalisms, amensialism, parasitism, predation, competition, antibiosis and their significance. Interrelationship between microbes, plant and soil-brief account on rhizosphere, phyllosphere and spermosphere Symbiotic and non-symbiotic association with higher plants, role of enzymes of microbial origin in the release of plant nutrients		<b>08 Hrs</b>
<b>Unit 4 Aquatic Microbiology</b>		
Water ecosystem (Fresh water and marine), Zonation of water ecosystem, water pollution-sources, characteristics of water pollution, health hazards due to		<b>08 Hrs</b>

water pollution, eutrophications. Biological indicators of water pollution-Chemical, Microbiological, enzymes and Biotechnological indicators, Water purifications, Brief account on water born diseases and control measures	
<b>Unit 5 Waste management:</b>	
Solid and Liquids wastes and their characterization. Treatment-Physical, chemical, biological solid waste treatment: Saccharification, Gasification, Composting and wastewater recycling-chlorination, ozonization, radiation, filtrations, reverse osmosis. Effluent treatment - (Dairy, Distillery, Tannery, Textile, Paper and sugar industries) Physical, chemical and biological sewage treatment-Trickling filters, oxidation pond, ditch and activated sludge treatment. Advanced wastewater treatment-rotating biological contactors (RBC), submerged aerobic filters, fluidized bed reactors, biological aerated flooded system, combination of anaerobic, denitrification and aerobic treatment of wastewater. Advanced activated sludge process and biogas Production, effluent treatment, DOC, COD, BOD and disposal of effluents.	<b>12 Hrs</b>
<b>Unit 6 Bioremediation</b>	
Concepts and principles <i>In-situ</i> and <i>Ex-situ</i> bioremediation, Phytoremediation. Biodegradation- Recalcitrant of pesticides in soil and their influence on soil micro flora, Xenobiotic (Halocarbons, C-1 compounds, aliphatic hydrocarbons, alicyclic hydrocarbons, aromatic hydrocarbons, Polycyclic hydrocarbons, Halogenated compounds). Biodegradation of natural polymers-Cellulose Lignin, Pectin, Chitin Detergents, soaps and plastics Biodeterioration-paper, Leather, Wood, Textiles, Mode of Deterioration and organisms involved	<b>10 Hrs</b>
<b>Unit 7 Bioleaching and bio-mining</b>	
Bioleaching and bio-mining, Productions of Oils and fuels from wood wastes, biofuels, Bio-diesel and byproducts of sugar industries	<b>02 Hrs</b>
<b>Unit 8 Environmental Education</b>	
Agrochemicals, Botanicals of Global Warming, ozone depletion, Greenhouse gas effect, acid rains & their impact and Biotechnological approaches in the environment	<b>02 Hrs</b>

### **MB CT 3.3 FOOD AND DAIRY MICROBIOLOGY**

#### **Course Outcome**

<b>Paper Code and Name</b>	<b>MB CT 3.3 FOOD AND DAIRY MICROBIOLOGY</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	

CO 1	Know the Concepts and scope of food and dairy microbiology.
CO 2	Understand the Important microorganisms in food and their source.
CO 3	Know the various principles of food spoilage, contamination. and detection of food borne microbes. Food preservation techniques
CO 4	Gain knowledge on food borne diseases, Food Borne outbreaks, lab testing procedures and preventive measures
CO 5	Analyze the food borne diseases, Food Borne outbreaks, lab testing procedures and preventive measures
CO 6	Know the Sanitation in manufacture and retail trade; food control agencies and their regulations. Food safety laws, standards and Food packing strategies.

Particulars	No of Hours (Hrs)
<b>Unit 1 Introduction:</b>	
Definition, Concepts and scope of food and dairy microbiology	02 Hrs
<b>Unit – 2 Food as a substrate for microorganisms:</b>	
Important microorganisms in food (Molds, yeasts, Bacteria) and their source. (Air, soil, water, plants and animals)	04 Hrs
<b>Unit -3 Contamination and spoilage:</b>	
Principles of food spoilage. spoilage of cereals sugar products, fruits, vegetables, meat and meat products, fish and sea foods poultry, spoilage of canned foods, Detection of food borne microbes- sampling, detection by culturing methods, physical and chemical methods	08 Hrs
<b>Unit 4 Food preservation:</b>	
General principles, physical methods (low temperature, high temperature and drying), chemical methods (Food additives), irradiation, biological methods of food preservation. Processing for heat treatment- D, Z and F values and working out treatment parameters, Freeze drying methods	08 Hrs
<b>Unit 5 Fermented foods:</b>	
Microbial activity in food vegetables (olives and cucumbers), meat (sausages), bread, idli, cocoa and coffee. Dairy foods – cheese, Shrikand, Tempeh, Therapeutic and nutritional value of fermented foods, spoilage and defects of fermented dairy products, oriental fermented foods their quality, standard and control	08 Hrs
<b>Unit 6 Milk and milk products:</b>	
Composition, properties, food and nutritional value and microbiology of milk, contamination, preservation, spoilage, testing of milk and milk products. Safety systems in dairy industries, Fermented milk products – cheese, yoghurt, shrikand, Kefir, Kumis and acidophilus milk.	08 Hrs
<b>Unit 7 Food borne infections and Bacterial Intoxication</b>	
<i>Brucella, Bacillus, Clostridium, Escherichia, Salmonella, Shigella, Staphylococcus, Vibrio, Yersinia and Listeria, Nematodes, Protozoa, Algae, Viruses and Molds. Mycotoxins</i> –Aflatoxins, Ochratoxins, Trichothecenes, Zealenone, Ergot Alkaloids; Food Borne outbreaks, lab testing procedures and preventive measures	08 Hrs
<b>Unit 8 Food sanitation:</b>	
Sanitation in manufacture and retail trade; food control agencies and their regulations. Food safety laws and standards, Food packing International – HACCP, ISO 9000 series, GMP and GLP, FDA and EU	04 Hrs

India – PFAA, FPO, MPO, CSO, the AGMARK, standards, bureau of Indian Standards (BIS). Food testing laboratories in India - SRI, FRAC.

– Media sterilization, method of batch sterilization and the design of continuous sterilization process, sterilization of fermentor, feeds air, and filter design	<b>03 Hrs</b>
<b>Unit 9 Bioreactors</b>	
Design of fermentors, basic function of a fermentors, body construction aeration and agitation. The achievement and maintenance of aseptic conditions sterilization of fermentors air supply, aeration and agitation, addition of inoculum and nutrients, sampling, foam control monitoring and control of various parameters, various types of values Types of bioreactors Specialized bioreactors – Tubular bioreactors, membrane bioreactors, Tower	<b>06 Hrs</b>

bioreactors, fluidized bed reactor, packed bed reactor and photo bioreactors	
<b>Unit 10 Fermentation technology</b>	
Types of fermentation process – Analysis of batch, fed batch and continuous bio-reactions, stability of microbial reactors, analysis of mixed microbial population, specialized bio-reactors (pulsed, fluidized, photo bioreactors etc). Measurement and control of bio-process parameters	<b>04 Hrs</b>
<b>Unit 11 Industrial production</b>	
Agar, Alginate, Alcohol (Ethanol), Organic acids (Citric, acetic, Lactic and Gluconic acid) Solvent (Glycerol Acetone, Butanol), Antibiotics (Penicillin, streptomycin, tetracycline) Amino acids (lysine, glutamic acid) Single cell proteins (SCP) Vitamins (Riboflavin) Enzymes (Amylase, lactase, protease), Hydrocarbons – Biodegradable plastic – Polyhydroxyalkanoates (butyrate, propionate etc), recombinant protein (hepatitis – B vaccine)	<b>08 Hrs</b>

### **MICROBIOLOGY FOURTH SEMESTER SYLLABUS**

## Course Outcome

<b>Paper Code and Name</b>	<b><u>MB CT 4.1 IMMUNOLOGY AND IMMUNOTECHNOLOGY</u></b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to:	
CO 1	Know the fundamental concepts and cells involved in immunology.
CO 2	Understand the principles, types of antigens and immunoglobulins
CO 3	Know the various principles of different Serological methods for detection and quantization of viral diseasesborne microbes.
CO 4	Gain knowledge on Immunotechniques and applications
CO 5	Understand the different methods of immunization and also about the different types of vaccines.

<b><u>PARTICULARS</u></b>	<b>No of Hours (Hrs)</b>
<b>Unit 1: Immunology- fundamental concepts and anatomy of the immune system:</b>	
History and scope of immunology, cells involved in immune system – T-lymphocytes, B-lymphocytes, Monocytes, Macrophages, APC, Neutrophils, Mast cells, Types of immunity-Adaptive immunity, Innate immunity, Components of Innate and Acquired immunity; Phagocytosis, Complement and Inflammatory responses, Haematopoiesis, Organs of the immune system- primary and secondary lymphoid organs, Lymphatic system, Lymphocyte circulation, Lymphocyte homing, Mucosal and Cutaneous associated Lymphoid tissue (MALT&CALT).	<b>08 Hrs</b>
<b>Unit 2: Antigen:</b>	
Concept of haptens, determinants, conditions of antigenicity, antigens and immunogenicity, super-antigen. Self and non-self-recognition, epitopes mapping, paratopes, nature of B-cell and T – cell epitopes, haptens, carbohydrate antigens, blood group antigens, synthetic peptides as antigens. <b>Immunoglobulins:</b> Structure and properties of immunoglobulin classes. Theories of antibody formation, Multiple myelomas and structural basis of antibody diversity.Freund’s adjuvants and its significance	<b>05 Hrs</b>
<b>Unit 3: Antigen-antibody Interaction and Immunotechniques:</b>	
Agglutination, Precipitation, Affinity, avidity and cross reactivity, Immuno double- diffusion, single radial immunodiffusion, Haemagglutination and complement fixation, direct and indirect Immunofluorescence	<b>05 Hrs</b>
<b>Unit 4: Immunodiagnostics:</b>	
Anti-microbial immunity: a general scheme, Defense against bacteria, viruses, fungi and parasites. Immunodiagnostics in virology – Serological methods for detection and quantitation of viruses including Hepatitis, Influenza, HIV and others	<b>05 Hrs</b>

<b>Unit 5: Immunotechniques and applications:</b>	
Immuno-assays, SRID, ELISA, ELISA-PCR, RIA, Western Blotting, Immunofluorescence and their application. Immuno-deficiencies and autoimmunity. Immunoelectrophoresis, Flow cytometry, Immunoblot, Complement fixation test (CFT), Montaux test. Applications of these methods in diagnosis of Microbial infections	<b>05 Hrs</b>
<b>Unit 6: Expressions and Regulation of Immune Response:</b>	
Regulation of immune response: Antigen processing and presentation, generation of humoral and cell mediated immune response, activation of B and T lymphocytes, cytokines and their role in Immune regulation, T cell regulation, MHC restriction, Immunological tolerance	<b>04 Hrs</b>
<b>Unit 7: Hypersensitivity reactions:</b>	
Allergy, Type I- Anaphylaxis, Type II- Antibody dependent cell cytotoxicity, Type III- Immune complex mediated reactions, Type IV- delayed type hypersensitivity, Symptoms and Immunological methods of diagnosis of hypersensitive reactions. Lymphokines and cytokines Assay methods, Immunological tolerance and modulation	<b>03 Hrs</b>
<b>Unit 8: Transplantation immunology:</b>	
Structure and functions of MHC and the HLA systems, types of grafts, grafts rejection, GVH reactions, mechanism of graft rejection, and prevention of graft rejection. Gene regulation and Ir-genes; HLA and tissue transplantation – Tissue typing methods for transplantations in humans; graft versus host reaction and rejection, Xeno-transplantation, (inter species, intra Species, Intra Genus) immunosuppressive therapy	<b>04 Hrs</b>
<b>Unit 9: Tumor immunology:</b>	
Tumor specific antigens, Immune response to tumors, Theory of surveillance, Immunodiagnosis of tumors – detection of tumor markers – Alpha foetal proteins, carcinoembryonic antigen, cancer therapeutics	<b>04 Hrs</b>
<b>Unit 10: Immunization &amp; Vaccine technology and recombinant vaccines:</b>	
Common immunization practice, types of vaccines and its application, edible vaccines, conventional vaccines, viral vaccines, bacterial vaccines, peptide vaccines, genetically engineered vaccines, hybridoma technology, immunization of animals Isolation of stimulated spleen cells, myeloma cell lines used and fusion partners. Fusion method production, detection and applications of monoclonal and polyclonal antibodies, production and application of lymphokines	<b>05 Hrs</b>
<b>Unit 11: Cytokines:</b>	
Structure and receptors, signal transduction, modulation of immune response cytokine profile of diseases	
<b>PRACTICALS</b>	

**MB CP 4.4 Based on MB CT 4.1 - Immunology and Immunotechnology**

1. Study of cells / Organs of Immune system
2. WBC and RBC count
3. Determination of Blood groups and Rh factor.
4. Estimation of Hemoglobin.
5. Determination of Bleeding Time (BT) and Clotting Time (CT).
6. Separation of Serum / Plasma from whole blood, Electrophoretic separation of serum proteins/plasma
7. Blood film preparation and identification of cells.
8. Precipitation of Immunoglobulins from serum by Ammonium sulphate precipitation.
9. Partial purification of Ammonium sulphate precipitated Immunoglobulins by dialyzing against phosphate buffered saline.
10. Agglutination tests (Haemagglutination, Latex agglutination, Bacterial agglutination).
11. Immunoprecipitation tests – Radial Immunodiffusion test / Ouchterlony double diffusion test.
12. Demonstration of antigen administration to animals Mice / Rat. (Intra muscular, Intra venial, Intra peritoneal)
13. Demonstration of ELISA
14. Demonstration of Western blot.
15. Isolation of Neutrophils
16. Determination of antibody titer of the serum.
17. Immunoelectrophoresis – Rocket Immunoelectrophoresis,

### **MB CT- 4.2 MEDICAL MICROBIOLOGY**

#### **Course Outcome**

<b>Paper Code and Name</b>		<b><u>MB CT- 4.2 MEDICAL MICROBIOLOGY</u></b>
<b>COURSE OUTCOMES (COs)</b>		
After completing this paper, the students will be able to:		
CO 1	Know the classify medically important microorganisms, normal microbial flora and their significance..	
CO 2	Understand the modes of disease transmission.	
CO 3	Know the various principles of different Serological methods for detection and quantization diseases	
CO 4	Gain knowledge on Immunotechniques and applications	
CO 5	Understand the Clinical Microbiology: Students will learn methods of Specimen collections, handling, transport, identification of pathogens.	
CO 6	Analyse the Pathogenesis, Clinical conditions, laboratory diagnosis, epidemiology, Prophylaxis and treatment of the microbial diseases. Nosocomial and Dental infections.	

<b><u>Particulars</u></b>	<b>No of Hours (Hrs)</b>
<b>Unit 1: History, development and scope of medical microbiology:</b>	
Classification of medically important microorganisms, normal microbial flora of human body and their significance. Human microbiome project	<b>04 Hrs</b>
<b>Unit – 2: Disease transmission:</b>	
Infection by bacteria, fungi, viruses and protozoa – Signs, symptoms, sources and reservoir of infection nosocomial infections, Pathogenesis - adhesion, invasion, host cell damage, release of pathogens, modes of transmission and epidemiology	<b>10 Hrs</b>
<b>Unit -3: Clinical Microbiology:</b>	
Specimen collections, handling, transport, identification of pathogens from specimen, growth and biochemical characteristics, Rapid methods of identification, immunological techniques, Bacteriophage typing, molecular	<b>10 Hrs</b>

measures (DNA probes, Restriction endonucleases, DNA Finger printing, RIA, ELISA, PCR) and susceptibility testing. A brief account on hospital management	
<b>Unit 4: Antimicrobial Therapy:</b>	
General Characteristics of antimicrobial agents, determination of antimicrobial activity. Mechanisms of action of antimicrobial agents; Antibacterial drugs- Sulfonamide, Quinolones, Penicillin, Cephalosporin, Tetracycline, Erythromycins; Antifungal drugs-Clotrimazole, Econazole, Miconazole, Terbinafine, Fluconazole and antiviral drugs- Abacavir, Adefovir; Drug resistance – Types, mechanism and implication.; Brief account on available vaccines and schedules	<b>12 Hrs</b>
<b>Unit 5: Disease diagnosis and epidemiology:</b>	
Pathogenesis, Clinical conditions, laboratory diagnosis, epidemiology, Prophylaxis and treatment of the following diseases. a) <b>Protozoa:</b> Amoebiasis, Giardiasis, Malaria, Leishmaniasis and Trypanosomiasis. b) <b>Bacteria:</b> Diphtheria, Typhoid, Gonorrhea, Syphilis, Plague, Leprosy, Tuberculosis, Gas gangrene, Tetanus, Septicemia, Cholera and Brucellosis. c) <b>Fungi:</b> Candidiasis, Mycetoma, Chromomycosis, Sporotrichosis, Cryptococcosis, Blastomycosis, Coccidiomycosis and Histoplasmosis. d) <b>Virus:</b> Measles, Mumps, Influenza, Yellow fever, HIV, Ebola, Zika, Herpes, Rabies, Hepatitis, Polio myelitis, Dengue fever, Japanese Encephalitis, KFD, Rhinovirus, CJD and Kuru. e) <b>Nosocomial Infections:</b> Bacteremia, Burn wounds, surgical site infections, Urinary tract and miscellaneous infections. <b>Dental Infections:</b> Dental Plaque, Dental carries and periodontal diseases	<b>08 Hrs</b>
<b>PRACTICALS</b>	
<b>MBCP 4.5 based on MBCT 4.2 Medical Microbiology</b>

## **P.G. Department of Music**

### **Criterion I - A.**

#### **A. Format for presentation of current curriculum**

### **Karnataka University, Dharwad Dept. of Music**

#### **Revised Syllabus for M. Music Semester Course w.e.f. 2018-19 onwards.**

#### **Introduction and a brief history**

Music has ever been in India, an inseparable part of its cultural life music reveals the true form and feeling that lie hidden in the depth of every soul and disclose the secrets of the inner life thus touching a man's conscience and elevating him to a finer being.

The art of music is allied to other fine arts like sculpture, architecture and painting. It accommodates itself to the character of all people and all tunes. In view of this in the words of Romain Rolland, "Although music may be known as an individual art, yet it is considered as a social art". It plays a vital role in moulding the cultural life of a country and hence its importance in the field of education.

With this in view, as to also further meaningful research in the field of Indian music, the Post-Graduate Department of music was started in the year 1976 under the able guidance of Dr. Mallikarjun Mansur, who was appointed as an Honorary Director of the Department of music and the faculty of Fine Arts.

## Regulations concerning Master Degree Programme

### Faculty of Social Sciences, from 2020-2021

#### Master Degree Programme in Philosophy (M.A.-CBCS)

Regulations Governing the Post-Graduate Master Degree Programmes under Choice Based Credit System (KU-CBCS), framed under Section 44(1)(C) of K.S.U. Act, 2000.

#### **Title:**

These Rules shall be called “Karnatak University Rules Governing Post-Graduate Programs under the Choice-Based Credit System” for Master Degree programmes.

#### **Commencement:**

These Rules shall come into force from the academic year 2020-2021.

#### **Definitions:**

In these Rules, unless otherwise mentioned:

- a) “University” means Karnatak University;
- b) “Post-Graduate Programs” means Master’s Degree Courses.
- c) “Compulsory Course” means a fundamental paper which a student admitted to a particular Post-Graduate programme should successfully complete to receive the Post Graduate Degree in the concerned subject.
- d) “Specialization Paper” means an advanced paper due to departmental choice for students wanting to receive Degree in the specialization area.
- e) “Open elective” means a course offered by Department for students of other Departments across the Faculty. Students have freedom to choose from a number of optional courses offered by other Department/s to add to their credits required for the completion of their respective programmes; however, if in a P.G. Centre there is only one Department for the time being, the students of that Department should study that open elective course.
- f) “Credit” means the unit by which the course work is measured. For this Rules, one Credit means one hour of teaching work or two hours of practical work per week. Normally a Semester is of 16 weeks duration in any given academic year. As regards the marks for the courses, 1 credit is equal to 25 marks, 2 credits is equal to 50 marks, 3 credits is equal to 75 marks and 4 credits is equal to 100 marks as used in conventional system.
- g) “Grade” is an index to indicate the performance of a student in the selected course. These Grades are arrived at by converting marks scored in each subject by the candidate after completing his/her Internal Assessment and Semester end Examinations. Each course carries a prescribed number of credits. These grades are awarded for each subject after conversion of the marks and after completion of the examinations in each semester.
- h) “Grade Point Average” or GPA refers to an indication of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of courses a student takes and the grades awarded to him/her for each of the subjects so chosen.
- i) “Cumulative Grade Point Average” or CGPA refers to the Cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown at the end of this rule. (Annexure-II)

#### **Minimum Eligibility for Admission:**

The students who have successfully completed the three year/ four-year Degree course or any other Degree course of this University or of any other University recognized as equivalent there to by this University shall be eligible for admission to the Post Graduate Programs under the KU-CBCS Program

provided they also satisfy the eligibility conditions like percentage of marks, etc, as may be prescribed by the University and as per Ordinance of the course.

**Duration of the Programme:**

The programme of study for the Post-Graduate Master's Degree shall normally extend over a period of two academic years, each academic year comprising of two semesters, and each semester comprising of sixteen weeks of class work.

**Medium of Instruction:**

The medium of instruction shall be English for all subjects, except in languages.

**Minimum Credits and Maximum Credits:**

- a) There shall be three categories of courses viz., Compulsory Course, Specialization Course and Open Elective Course. Compulsory and Specialization Course should be from the concerned department only. The Open Electives are the courses offered by other Departments across the Faculty.
- b) Each course shall have a definite course objective, Eligibility criterion for taking the course, scheme of Evaluation including the components of internal Assessment (IA) marks, Projects (if any), the number of contact hours, type of practical and the prescribed credits.
- c) The credits for each of Compulsory Course may vary from 3 to 4 credits; for specialization course it may vary from 1 to 4, In case of Open Elective Course, it shall be 1 to 3 credits for each paper.
- d) A student shall register for minimum of 18 credits and a maximum of 30 credits per semester. However to qualify for the Degree in any Department under any school and Faculty, he/she should have registered and cleared a minimum number of credits, which shall vary from course to course.

**Course Structure:**

a) The students of Post-Graduate Programme shall study the courses as may be approved and prescribed by the Academic Council of the University from time to time.

b) A typical Master's Degree program consists of a number of courses. This number varies from discipline to discipline. The term course is used to indicate a logical part of a subject matter of the program (also referred to as paper). In essence the courses are of three types:

- i) Compulsory Course
- ii) Specialization Course or Optional Course and
- iii) Open Elective Course.

c) Each program shall have a set of Compulsory Course that a student must complete to get the degree in the concerned Department. These are distributed in each semester. There could be a minimum of such papers for each semester depending on the Department.

d) The Students shall also choose a minimum number of Specialization Course offered within the department. Each department will offer at least one specialization paper in the third and fourth semester. The Department, BOS and the Faculty may also spell out the number of such Specialization Courses a student will have to take for the Specialization. The Department offering of Specialization Course shall provide the flexibility in the system so that the student can opt for a variety of programs depending upon their interest.

e) Each Department shall offer at least one Open Elective Course per semester for students from other Department. Student from the same Department are generally not allowed to opt the courses offered as Open Elective Course in the same Department.

f) Each course (paper) in this system is designed carefully to include lectures/tutorials//laboratory work/seminars, project work/practical training/report writing/Viva-voce etc., to meet effective teaching and learning needs and the credits are assigned suitably.

g) Masters Degree Programs are essentially semester system Programs. There shall be 4 semesters in each Program. There shall be two semesters for each year of the Program. Each of the Semester will be of 16 weeks duration including evaluation and grade finalization period. The academic session in each semester will provide 90 teaching days with 40 hrs of teaching/learning periods in six days session per week.

h) The normal calendar for the semester would be as follows:

- i) I and III Semester -August to November

**Attendance:**

- a. Each paper shall be taken as a unit for the purpose of calculating the attendance.
- b. Each student will have to sign and mark his attendance for every hour of teaching of each paper. At the end of every month all teachers shall notify the attendance of every student on the Notice Board of the Department during 2<sup>nd</sup> week of every month. Chairman shall certify the fulfillment of required attendance of every candidate in the Examination form.
- c. Certain proportion of the marks in Internal Assessment shall be awarded based on attendance as an incentive to the student for regularity in attendance.
- d. A student shall be considered to have satisfied the requirement of attendance for each paper, if he/she has attended not less-than 75% of the number of classes held up to the end of the semester including tests, seminars, group discussions, practical, tutorials, etc.
- e. However, if a student represents his/her institution, University, state or Nation in sports, NCC, NSS or Cultural or any other officially sponsored activities, he/she shall be eligible to claim the attendance for the actual number of days participated subject to a maximum of 20 days in a semester based on the specific recommendation of the Head/Chairman of the Department.

**Evaluation:**

- a. Each Course has two components, the first being Internal Assessment Marks – 22 marks each paper, each semester. The Internal Assessment (IA) consists of two written tests of 11 marks each per semester per paper. Three (3) marks are awarded/given for attendance as shown in (d), below, and the second being the Semester End Exams. The Internal Assessment (IA) marks are based on continuous internal assessment. The total marks for the Internal Assessment would be based on the total credit awarded to the Course. For instance if a Compulsory Course has a Credit award of 4, then the total maximum marks would be 100 for the subject.
- b. The marks shall be displayed on the Notice Board of the Department also. The tests shall be written in a separately designated book and after evaluation the same should be shown to students.
- c. In case of candidates who wish to appear in improvement examinations, if any, the marks obtained in the Internal Assessment shall not be revised. There is no improvement for Internal Assessment.
- d. To encourage the students for the regular participation in academic curricula, the following break-up of marks for attendance has been recommended –

Attendance (in percentage)	Marks
Above 90	3
Above 80 & upto 90	2
Above 75 & upto 80	1
75	No marks

- e. Students seeking the condoning of attendance after representing the University have to produce attendance certificates from the concerned authority and that attendance period to condoned off shall be considered for the allotment of marks as above.
- f. There shall be one end semester examination of 3 hrs duration (for 75 marks/ paper). Each answer scripts of the semester-end examination (theory and project report) shall be assessed by two examiners (one internal and another external). The marks awarded to that answer script shall be the average of these two evaluations. If the difference in marks between two evaluations exceeds 20% of the maximum marks such a script shall be assessed by a third external examiner. The marks allotted by the third examiner shall be averaged with nearer award of marks of the two evaluations.

**Completion of Course:**

- a. A candidate is expected to successfully complete Master's (P.G.) Degree course in two years from the date of admission.
- b. Whenever the syllabus is revised, the candidate reappearing shall be allowed for PG Degree examinations only according to the new syllabus.

- c. The CBCS scheme is fully carry-over system. However, the four-semester two years course should be completed by a student within double duration of the normal course period (i.e. 4 years). For these periods, candidate may be permitted to take examination in cross-semester (even semester examination in even and odd semester examination in odd semester examination) after paying the examination fee of Rs. 1000/- per paper.

**Declaration of Results:**

- a. Minimum for a pass in each paper shall be 40% of the total 100 marks including both the IA and the semester end examinations. However, the student/candidate should obtain at least 40% of the marks in the Semester End Examination. There is no minimum in the IA marks. However after adding the IA and the semester end examinations, the candidates should score a minimum of 40% of the maximum marks for the subject.
- b. The candidates, seeking improvement of their results shall submit a representation along with a permissible fee to the Registrar (Evaluation) and surrender the degree certificate/provisional pass certificate/original marks cards of that semester within 15 days of announcement of result.

<b>Paper Code and Name</b>	<b>C 04: Modern Symbolic Logic</b>
<b>COURSE OUTCOMES (COs)</b>	
After completing this paper, the students will be able to understand:	

CO 1	Articulate key philosophical arguments in the field of symbolic logic.
CO 2	Translate natural language sentence into precise symbolic form and vigorously evaluate standard inferences.
CO 3	Apply formal techniques and systematically codify deductively valid arguments.
CO 4	Students will translate English sentences into two basic languages used in formal logic, viz., the language of truth-functional logic and the language of quantificational logic.
CO 5	Construct arguments on issues dealing with symbolic logic using critical reasoning to identify and investigate philosophical theses and evaluate information and its sources.

<b>PARTICULARS</b>	<b>Teaching Hours (Max. 60)</b>
<b>Unit 1:</b> 1.Introduction: a) Definition and Utility of Symbolic Logic. b) <i>Nature of Argument</i> . Its elements- <i>Propositions-(subject-copula-predicate), Premises and conclusion</i> . c) Formal Characteristics of Logic – Forms of arguments and forms of propositions. d) Validity and Invalidity as distinguished from truth and falsity.	15 Hours
<b>Unit 2:</b> Propositional Theory a) Simple and compound statements (Propositions), Truth functions – Negation, Conjunction, disjunction, conditional and bi-conditional statements. b) Truth-Table: <i>Statement forms and argument forms. Statement variables, substitution instances, specific form, a form</i> . Tautology, contradiction and contingency. c) The Nature of truth-functional arguments – <i>Use of truth tables to decide the validity/invalidity of arguments/argument forms</i> . Means of establishing the validity of such arguments.	15 Hours
<b>Unit 3:</b> Construction of formal proofs ( <i>Method of Deduction</i> ), <i>Elementary valid argument forms</i> . -rules of Inference for propositional (sentential) Logic. ( <i>including and Rule of Replacement</i> ). <i>Proving the invalidity of arguments by the method of assigning truth values; the Rule of Conditional Proof, Indirect Proof; shorter Truth-table Technique</i> .	15 Hours
<b>Unit 4:</b> Quantification Theory: a) Singular and General Propositions. b) Construction of Formal Proofs of validity using Preliminary Quantification Rules c) Proving Invalidity of Invalid arguments. d) Structures of Multiply General propositions. e) Logical truth involving Quantifiers.	15 Hours

**Karnatak University, Dharwad**  
**Department of Physics and Electronics**

**Preamble:**

The Department of Physics, one of the oldest and major Departments at Karnatak University, was founded in the year 1953. Eminent spectroscopist Dr. N.R.Tawade was the first Head of the Department and its faculty included very distinguished scientists. The Department, at present, has 11 faculty members, 03 teaching assistants and 56 research scholars. The Department has had a tradition of strong teaching program and quality research output. As a result, it has been nationally recognized for excellence in teaching and research programs with major grants from UGC under Special Assistance Program (SAP) and DST under FIST program and for the individual faculty members from UGC, DST, BRNS and IUAC. Under the UGC-SAP Program, the Department is recognized as Centre of Advanced Study at Level-II with a grant of Rs 2.63 cr and the Department is associated with UGC's the Center with Potential for Excellence in a Particular Area(CPEPA) involving other Science Departments as well. While most of the passed-out students have become school and college teachers, allied job holders, a small but significant number of the students have excelled as scientists (some are Bhatnagar awardees), university faculty and vice-chancellors, and likewise some are successful in foreign countries.

**The Course Details:**

The Department offers M.Sc. and M.Phil Courses and Ph.D. Program in Physics. The M.Sc. Program is a two-year Course, spread over four semesters, each of which is sixteen weeks duration. The Course comprises compulsory and specialization Courses and Open Elective Courses. A student admitted to the Course leading to a M. Sc. Degree should necessarily study the compulsory and specialization Courses in Physics, offered in the Department as well as the Open Elective Courses (OEC), in different subject(s), offered by other Departments. The Student has the freedom to choose two Courses during the study under prescribed OECs.

There are 6 compulsory and 8 specialization theory Courses, 7 practical Courses and one Project. Of these, 10 theory Courses and 4 practical Courses are common to all the students studying in I- and II-Semesters. The remaining 4 theory Courses, 3 practical Courses and the Project are specialization-based Courses offered in the III- and IV- semesters. Specialization Courses are offered in the following subjects:

- 1) Atomic & Molecular Physics**
- 2) Condensed Matter Physics**
- 3) Electronics**
- 4) Nuclear & Particle Physics.**

There are two Elective Courses (under OEC), one in II-Semester and one in III-Semester, offered by the Department of Physics for the students of other science Departments.

**Credits:**

A student shall register for 24 credits in I-, II- and III-semester and 26 in IV-Semester and is required to successfully complete 98 credits for the M.Sc. Course in Physics. The credits for each of the theory (compulsory, specialization and elective) courses, and for each of the practical (compulsory and specialization) courses shall be 4. For the semesters I to IV, there shall be 40 credits for the compulsory theory courses and in each of the III- and IV-semester, there shall be 8 credits for the specialization theory courses. There shall be 4 credits each for the open elective courses(OEC). In the I-, II- and III-semester, there are two practical courses, each of which carries 4 credits and in the IV semester, however, while one practical course 4 credits, the project carries 6 credits (see Table 1). Students are allotted to specializations in the third semester on the basis of their order of preference

The student shall opt for an elective course (OEC) at the time of admission.

**1. M.Sc. Degree Course:**

**1.1 Duration of the Course:** The M.Sc. Course is of two years duration spread over four semesters each of sixteen weeks duration.

**1.2 Eligibility for Admission:** B.Sc. graduates of this University or of any other University recognized as equivalent thereto with Physics and Mathematics as optional subjects are eligible. The candidate should have obtained at least 45% of marks in optional subjects as well as in aggregate. Relaxation in respect of SC/ST/Cat-I etc. will be applicable as per prevailing rules of the University.

**1.3 Intake :** Total intake to the M.Sc Course in Physics under the jurisdiction of Karnatak University is 259. The intake to the Course at the Department of Physics at Karnatak University, Dharwad, is 69. The Course is also offered at Karnatak Science College (intake, 35), JSS College, Dharwad (intake 60 (30 under KUD quota + 30 under Management quota), Sri Siddeshwar First Grade Govt College, Naragund (15 all under KUD quota), JT Science College, Gadag (intake 30 (15 under KUD quota + 15 under Management quota) and KSS College, Gadag (intake 50 (25 under KUD quota + 25 under Management quota) The Karnatak University reserves the right to vary intake as deemed necessary including admission rules, fee structures and roster as per notification from time to time.

**2. Attendance:** Every student must have at least 75% attendance in each of the Courses (theory and practicals) in each of the semesters. Shortage of attendance will be dealt with as per the University rules from time to time.

**3. Medium of Instruction:** The medium of Instruction shall be English.

**4. Scheme of Instructions :**

4.1 In each semester there will be FOUR Theory Courses and TWO Practical Courses.

4.2 Each theory course is of FOUR hours of lectures per week. Each practical course is of FOUR contact hours per week. These include seminars, tutorials and discussion classes. Internal Assessment (IA) shall be conducted during the semesters. Each theory and practical Course shall carry 100 marks, out of which 25 marks are for internal assessment (IA). The various components of IA for 25 marks are as follows: Attendance-3 marks, written test(s)/seminars/assignments (minimum two)-22 marks. Total maximum marks are 600 per I-, II- and III-semester and 650 marks in IV-Semester.

4.3

**Project:** Every student has to compulsorily take a Project course. This is in the IV-semester. The Project may be a theoretical or an experimental work in the respective specialization subject. More than one student may be required to work on an assigned project. Project course carries 150 marks, of which 25 is for IA, 50 marks for viva-voce examination with presentation of the work and 75 marks for the evaluation of dissertation, at the semester-end examination.

**5. Scheme of Evaluation:**

Evaluation of each of the courses will have two components: the first being internal assessment (IA) and the second being the semester-end examinations.

For theory and practical courses having a credit award of 4, the total maximum marks shall be 100. Out of the total of 100, 25 marks shall be earmarked for the IA and the remaining 75 marks for the semester-end examination.

For the project, carrying 6 credits, the total maximum marks shall be 150. Out of 150, 25 marks shall be earmarked for the IA and the remaining 125 marks is shared between viva-voce carrying 50 marks and evaluation of dissertation carrying 75 marks for the semester-end examination.

### 5.1 Examination:

Examinations will be conducted at the end of the each semester as per the University regulations governing PG Courses.

The semester-end examination in each theory course will have a question paper for 3 hours duration and will carry a maximum of 75 marks. The IA tests will be conducted during the semester. The mode of conducting the tests may involve a common time-table for all the courses in that semester.

Each practical course will have an examination, generally, of four hours duration and will carry a maximum of 75 marks in the semester-end exam. A two-hour duration IA for 25 marks is conducted at the end of the semester.

**Project:** A project dissertation should be submitted by each student at the end of IV-semester to become eligible for the examination. The evaluation of the project dissertation carries a maximum of 75 marks. The viva-voce examination carries a maximum of 50 marks and will be in the form of presentation by the student. During this examination, one external examiner and one project supervisor or along with internal examiner will be involved in the evaluation. IA for 25 maximum marks is conducted during the mid semester, either through a test or a seminar. In the case of seminar, an internal examiner along with the project supervisor will be involved in the evaluation.

**5.2 Question Paper Pattern:** Each theory Course paper is organized into I, II, III and IV Units. A question paper comprises two questions as internal choice from each of these four Units, giving a total of eight questions and, a ninth question has four sub-questions drawn from each of the Units with an option to answer any three. The four sub questions may be in the form of a problem / short answer question / question for explanation of a concept. Each question carries 15 marks, giving a total of 75 marks for the question paper. Below is the summary of the Scheme:

## **6. Maximum Period for the completion of the M.Sc. Degree programme :**

There shall be carry-over from first to fourth semester. The maximum number of years required by a student to complete the degree is as specified by the University from time to time.

## **7. Rules and Award of Degree :**

7.1 The Minimum for a pass in each course shall be 40% (semester-end exam and IA put together). Further, the candidate shall obtain at least 40% of the marks in the semester-end exam and 50% in aggregate when all Courses of four semesters are put together. There shall be no separate minimum for IA.

7.2 **Award of Degree:** Students after successfully completing all the Courses prescribed for all the four semesters by scoring minimum of 50% in aggregate will become eligible for the award of M.Sc. Degree in Physics.

## **7.3 Results: Marks and Grading**

Results of candidates are declared based on the marks obtained and grades earned and classes are awarded as per the University rules.

## **8. Co-Curricular and Extra Curricular activities :**

### **8.1 Co-curricular Activities :**

Seminars, tutorials, problem solving sessions, discussion classes will be conducted periodically. However, these activities do not carry any marks or credits.

### **8.2 Computer Laboratory facilities:**

Students are provided with computer facilities for their curricular as well as for their co-curricular studies and internet browsing.

### **8.3 Library Facilities:**

The Department has a library with research journals and text/reference books. Students are allowed to borrow on regular basis.

### **8.4 Students Counseling :**

Students will be assigned to teachers for counseling regarding their academic and other matters.

### **8.5 Epsilon club :**

An association called € (epsilon) club exists in the Department for the all round development of the students. Lectures by students, staff and special lectures by eminent scientists are arranged under the auspices of this club.

Extra-Curricular activities such as sports, literary and cultural activities are also conducted under the auspices of this club.

### 8.6 Special Encouragement:

Students interested in research activities are encouraged by providing them with an opportunity to work in the research laboratories and USIC under the guidance of the faculty members.

#### **4. Revised curriculum with changes/ additions/ modifications highlighted\***

##### **Unit I**

**Special functions:** Beta and gamma functions. Solution of differential equation using power series-Frobenius method.

**Legendre functions:** Legendre polynomials, Rodrigue's formula; generating function and recursion relations; Orthogonality and normalization; associated Legendre function, special harmonics.

**Bessel functions:** Bessel functions of the first kind, recursion relations and orthogonality.

**Hermite functions:** Hermite polynomials, generating function, recursion relations; Orthogonality.

**Laguerre functions:** Laguerre and associated Laguerre polynomials, recursion relations; Orthogonality.

Applications of special functions to problems in physics.

##### **Unit II**

**Matrices:** Orthogonal, Hermitian, and unitary matrices; eigenvectors and eigenvalues, diagonalization of matrices, Matrix representation of linear operators, eigenvalues and eigenvectors of operators, simultaneous eigen vectors and commutativity, applications to physical problems

**Tensors:** Types of tensors, contravariant and covariant tensors, symmetric and antisymmetric tensors, Tensor algebra : equality, addition and subtraction, tensor multiplication, outer product; contraction of indices, inner product, quotient theorem, Kronecker delta, metric tensor, Christoffel symbols. Tensors in physics. Problems.

12 Hours

##### **Unit III**

**Group Theory:** Groups, subgroups and classes; homomorphism and isomorphism, group representation, reducible and irreducible representation, Schur's Lemmas, orthogonality theorem, character of a representation, character tables, decomposing a reducible representation into irreducible representations, construction of representations, lie groups, rotation groups  $SO(2)$  and  $SO(3)$ . Problems

12 Hours

##### **Unit IV (Newly Added)**

**Monte Carlo methods:** Introduction, definitions, Illustration of the use of Monte Carlo Methods, Examples on Particles in a Box and Radioactive Decay, Probability Distribution Functions, Multivariable Expectation Values, The Central Limit Theorem, Definition of Correlation Functions and Standard Deviation, Random Numbers and properties, Improved Monte Carlo Integration, Change of Variables, Importance of Sampling, Acceptance Rejection Method, Monte Carlo Integration of Multidimensional Integrals, Brute Force Integration, Importance of Sampling, Classes for Random Number Generators. Metropolis algorithm and detailed balance, Ising model. Examples and problems.

**PG85T102 (Course PHCT1.2): Classical Mechanics**

Teaching hours per week: 4  
No. of Credits: 4

**Course Outcomes (COs):**

After successful completion of the course on Classical Mechanics, a student will be able to

- Demonstrate a basic and advanced knowledge of Lagrangian and Hamilton's principles and solve related problems.
- Demonstrate the concept of motion of a particle under central force, concepts of different orbits and apply advanced methods to deal with the central force problems.
- Understand the kinematics and dynamics of rigid body in detail and ideas regarding Euler's equations of motion and techniques for solving problems of rigid body mechanics.
- Learn the details of fixed and moving co-ordinate systems, Coriolis force acting on falling body, torque free motion and motion of symmetric top.
- Understand the Hamiltonian formalism in solving physics problems and understand Poisson bracket method in tackling physical problems.
- Use Hamilton-Jacobi theory for finding the solutions of various classical systems.
- Understand the fundamentals of rocket propulsion, including thrust equation, specific impulse of a rocket engine.
- Understand the effect of gravity on rocket, equation for burnout velocity, rocket staging and optimization of multistage rocket.

**Unit I**

**Lagrangian Mechanics:** Generalized coordinates, constraints, Lagrange equation, Hamilton's principle, Derivation of Lagrange's equation from Hamilton's Principle. Symmetry and

conservation laws: momentum conservation, cyclic co ordinates, angular momentum conservation and conservation of energy.

**Motion in central force field:** Equivalent one body problem, motion in central force field, Equation of orbit. Elliptic orbits, hyperbolic orbits and parabolic orbits. Elastic scattering in central force field, Rutherford scattering. Problems

12 hours

## Unit II

**Motion of Rigid body:** Fixed and moving co ordinate systems. Coriolis force, Coriolis force acting on falling body Euler theorem. Euler angle, angular momentum and kinetic energy of a rigid body. Inertia tensor, Euler's equations of motion. Torque free motion. Motion of symmetric top – Nutational motion, Problems.

12 hours

## Unit III

**Hamiltonian Mechanics and Brackets:** Legendre transformation and Hamilton equations of motion: conservation theorem and physical significance of Hamiltonian. Derivation of Hamilton's equation from a variation principle: principle of least action.

Lagrange and Poisson brackets, Equation of motion in Poisson bracket notation.

**Hamilton Jacobi Theory:** Hamilton Jacobi equation of motion for Hamilton's principle and characteristic functions, Harmonic oscillator problem as example of Hamilton Jacobi method. Problems

12 hours

## Unit IV (Newly Added)

**Rocket Dynamics:** Introduction equation of motion for variable mass – performance of single stagerocket; exhaust velocity, structure factor and mass ratio. Exhaust speed parameter, effect of gravity; expression for height attained by single stage rocket, performance of single stage rocket optimization of multi stage rocket Launch site selection problems

12 hours

### **Course Outcomes (COs):**

At the end of this course, the students will be able to

- Understand the basic principles of working of operational amplifiers and design op-amp based circuits such as amplifier, integrator, differentiator, full wave and half wave rectifiers. Understand the design of various electronic circuits.
- Gain knowledge of designing additional op-amp based filter circuits and oscillators, comparators, frequency multipliers, basics of modulation and demodulation.
- Appreciate the importance and working of Optical Fibre Communication system, its design and applications which help the student to appreciate the current advances in communication system.
- Gain knowledge of working of various Gates and logic circuits, sequential circuits which form the elements of Digital circuits.
- Will be able to implement the above practically with the help of Numerical problems solving.

**Revised curriculum with changes/ additions/ modifications highlighted\***

## Unit I

**Operational amplifier:** Introduction to Op Amp, Basic op amp circuit, 741 IC Op-Amp, open loop op-amp configurations – inverting, non inverting and differential amplifiers, feedback configurations, voltage follower, non inverting amplifier, Inverting amplifier, Op-Amp parameters Input output voltages, common mode rejection ratio, slew rate and frequency limitations. Summing, difference, scaling and averaging amplifier. DC and AC Voltmeter, instrumentation amplifier, Integrator and differentiator, Differentiator and Integrator design and performance, Precision half wave and full wave rectifier, Clipper and Clamping circuits, Peak detector, Sample and hold Circuit.

12 hours

## Unit II

**Op-amp applications and specialized ICs:** Active filters – types, All pass phase shifting circuits, first and second order active low and high pass filter. Band pass filter, band stop filter. Oscillators – basic principles, phase shift oscillator, Wein bridge oscillator, triangular and rectangular wave generator. Comparators and converters – basic comparator, zero crossing detector, Inverting and non inverting Schmitt trigger, Astable and monostable multivibrator. Precision voltage regulator (fixed and adjustable). IC 565 Phase locked loop, characteristics, Frequency multiplier, AM and FM demodulator.

12 hours

## Unit III

**Optical fiber communications:** Introduction, optical fiber wave guide, ray theory transmission total internal reflection, acceptance angle, numerical aperture, skew rays, Electromagnetic mode theory, Modes in planar guide, Phase and group velocity, Types of fibers, step index fiber, graded index fiber, single mode fiber, mode field diameter and spot size, effective refractive index, photonic bandgap fibers. Intrinsic and extrinsic absorption losses, Rayleigh scattering, fiber bend loss, material dispersion and scattering effects. Preparation of optical fibers, liquid phase (melting) techniques, Plasma activated chemical vapor deposition. Structure and characteristics of multimode step index fibers, graded index fibers, single mode fibers and plastic clad fibers, optical fiber connectors, fiber alignment and joint loss, fiber splices. Light sources for OFC, LED and laser diodes, detectors p-n, p-i-n and avalanche photodiodes.

12 hours

## Unit IV

**Digital Electronics:** Boolean operations and expressions, Boolean analysis of logic gates, simplification of Boolean expression. Karnaugh map: two, three and four variable map.

**Digital logic gates:** AND, OR, NAND and NOR gates, AND-OR and NAND-NOR implementation of Boolean Expressions. Logic gate operation with pulse waveforms.

**Combinational Logic circuits:** Adder, parallel binary adder, subtractor, parity generators and checkers, comparators, decoders, BCD to seven segment decoder, encoders, code conversion, multiplexers, demultiplexers.

**Sequential circuits:** Latches, flip flops, SR, D, JK, Master Slave JK, T flip flops, counters, synchronous and asynchronous counters, ripple counters, mod n counters, mod 3, mod 5 and mod 10 counters, registers, shift registers, timing sequences, memory units, random access memory (RAM).

### **Course Outcomes (COs):**

The specific outcomes of this course are as under:

- The formation of crystalline state in solids along with the basic definitions associated with geometrical arrangement of atom in crystal can be understood.
- The atomic arrangement in real crystals can be studied experimentally by using X-ray diffraction by introducing the concept of reciprocal lattice.
- The crystal binding of solids through chemical bonding is an important topic to understand the strength and physical properties of materials that can be achieved by this course.
- The behavior of materials in terms of interaction of atoms and electrons in subject to applied external fields/force can be understood.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Crystal structure:** Lattice translational vectors and lattices, basis and crystal structure, primitive and non primitive cells, fundamental types of lattices, Miller indices. Symmetry elements, point groups and space groups. Examples of simple crystal structures.

**Crystal diffraction and reciprocal lattice:** Bragg law, reciprocal lattice vectors, diffraction conditions, Laue equations, Brillouin zones. Atomic form factor, structure factor and its calculations in simple cases. Experimental methods of X-ray diffraction, details of powder X ray diffraction of crystal structure determination. (Newly Added)

12 Hours

#### **Unit II**

**Crystal binding:** Crystals of inert gases: Van der Waals London interaction, repulsive interaction, cohesive energy, compressibility and bulk modulus.

**Ionic Crystals:** Madelung energy, Born Mayer Model, evaluation of Madelung constant for an infinite line of ions. The nature of binding in covalent, metal and hydrogen bonded crystals.

**Lattice vibrations and thermal properties:** Elastic waves, density of states of a continuous medium, Theories of specific heat: Classical, Einstein and Debye models. Vibration of one dimensional monatomic and diatomic lattices, properties of lattice waves, phonons. Lattice thermal conductivity.

12 Hours

#### **Unit III**

**Free electron model of metals:** Free electron gas and formulation of free electron theory of

metals, electrical conductivity and origin of collision time, electrical conductivity versus temperature, Mattheissen's rule. Heat capacity of free electrons, Fermi Dirac distribution, the concept of Fermi surface, the effect of Fermi surface on electrical conductivity. Thermal conductivity: Wiedemann Franz law.

**Energy bands in solids:** Origin and magnitude of energy gap. Bloch functions. Kronig Penney model (qualitative). Number of states in a band. Distinction between metals, insulators and semiconductors. Velocity of the Bloch electron, electron dynamics in an electric field, concept of hole, dynamic effective mass of electrons and holes.

12 Hours

#### Unit IV

**Semiconductors:** Intrinsic and extrinsic semiconductors. Intrinsic and extrinsic carrier concentrations, position of Fermi level, electrical conductivity and mobility and their temperature dependence. Hall effect in semiconductor.

**Superconductivity:** Experimental survey, qualitative ideas about BCS theory, high temperature superconductors and their applications.

**Magnetic properties:** Classification of magnetic materials, quantum theory of paramagnetism Curie law; Weiss' molecular field theory of ferromagnetism, Curie – Weiss law.

**Defects in solids:** Types of imperfections, Schottky and Frenkel defects and their concentrations.

**Course Outcomes (COs):**

The specific outcomes of this course are as under:

- It helps to solve the crystal structure of given X-ray patterns and hence to estimate the lattice and lattice parameters.
- The experiment gives an idea to measure the energy gap of a given semiconductor through the temperature dependent resistivity measurement.
- It clears the concept of structure factor and its significance.
- Design and learn implementing the operational amplifier IC 741 based amplifier, adder, subtractor, differentiator, integrator circuits
- Design and learn implementing op-amp 741 based circuits in generation of sinusoidal and triangular waveforms and characterize them
- Design and learn implementing op-amp based low-pass, high-pass and band-pass filter circuits.
- Learn simplification of Boolean expressions using NAND gates
- Learn using FORTRAN programming for solving E&C related problems

**Revised curriculum with changes/ additions/ modifications highlighted\***

1. Op-Amp 741 as an adder, subtractor, differentiator and integrator.
2. Wien bridge oscillator using Op-Amp 741.
3. Triangular wave generator using op-amp 741.
4. Low pass, high –pass and band pass active filters using Op Amp 741.
5. Simplification of Boolean expressions and implementation using 2 input NAND gate IC7400.
6. Fortran Programming using Fortran 77.
7. Analysis of X ray diffraction pattern.
8. Thermistor characteristics
9. Determination of energy gap of semiconductor by resistivity measurement (4 probe method).
10. Developing of X - ray pattern for a given substance using X – ray diffractometer and determination interplanar spacing.
11. Structure factor calculation of simple crystal structures.

**Course Outcomes (COs):**

At the end of the course students will learn:

- Basic postulates of Quantum mechanics, Ehrenfest's theorem and simple applications of Quantum Mechanics.

- Reduction of two body problem to single particle problem. Centre of mass and relative motions, eigen values and eigen functions.
- Theory of time-independent perturbation theory (the case of a system with non-degenerate energy levels) its applications.
- Theory of time-dependent perturbation theory its concept and its applications.
- Scattering theory: Differential and total cross-section. Born approximation and its derivation of the expression for different cross-section.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Basic Principles:** Hermitian operators, observables; Eigenfunctions, eigenvalues and orthonormalization of eigenfunctions, completeness. State functions as probability amplitude and the principle of superposition. Momentum, Hamiltonian and energy operators, Schrodinger equation. Probability density and probability current density, expectation value, Ehrenfest's theorem; basic postulates of quantum mechanics.

**Simple Applications:** Eigenvalues and eigenfunctions of free particle, particle in infinite square well and of simple harmonic oscillator by polynomial method, barrier transmission: leakage of free particle through a thick rectangular potential barrier and transmission and reflection coefficients.

12 hours

#### **Unit II**

**Hydrogen atom:** Particle in spherically symmetric potential, Reduction of two body problem to a single particle problem. Center of mass and relative motions; eigenvalues and eigenfunctions. Hydrogen like atom, eigenvalues of energy and eigenfunctions.

**Angular momentum:** The expression for the three Cartesian components and the square of the angular momentum, their commutation relations, expression for the operators in polar coordinates, eigenvalues and eigenfunctions in terms of polar coordinates; eigenvalues and eigenfunctions of the square and z component of angular momentum.

12 hours

#### **Unit III**

**Time Independent Perturbation Theory:** Eigenvalue of energy and eigenfunction in the first order approximation (the case of a system with non degenerate energy levels). Application to anharmonic oscillator and to the ground state of Helium atom.

**Time Dependent Perturbation Theory:** Concept of the theory, transition from one discrete level to the other, to a continuum states: Fermi's Golden rule. The harmonic perturbation, resonance

transitions. Semi classical theory of Einstein's A & B coefficients. Interaction of radiations with a system of atoms, transition dipole moment, selection rules.

12 hours

#### **Unit IV**

**Elastic Scattering:** Differential and total cross section, phase analysis. Significance of the partial waves and phase shifts, S wave scattering from a square well potential. The Born approximation, derivation of the expression for differential scattering cross section, condition for validity of the approximation: application to square well potential and screened coulomb potential.

At the end of the course students will learn:

- How to interpret optical spectra using theoretical models & achieve agreement with experiment.
- How typical lasers work, their use in advanced frontier areas.

- How to interpret microwave and mid IR spectra due to diatomic molecules, their relevance in chemical sciences, astrophysics & planetary science.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Atomic spectra and structure:** Overview of the salient features of optical spectra due to alkalis, Boron group and IIA and IIB group of elements (as in Periodic Table). Spin orbit interaction due to single valence electron atoms and its doublet spectra. Vector model for two valence electron atoms: Determination of spectral terms (singlets, doublets, triplets, etc); derivation of interaction energies in LS and jj couplingschemes; the Lande interval rule; singlet and triplet splitting. Normal and anomalous Zeeman Effect of singlets and doublet states(qualitative). Stark effect in hydrogen (qualitative).

12 Hours

#### **Unit II**

**Laser Physics:** Laser principles: Einstein coefficients, optical pumping, population inversion, the threshold condition– the Schawlow Townes condition for laser oscillations. Three level and four level laser systems. The Ruby laser and He Ne Laser: energy level diagrams, excitation mechanism, construction and working. Shape and width of spectral lines: mechanisms; Natural, Doppler, Collision/pressure and Stark broadenings. Laser cooling: basic concepts, trapping techniques of neutral atoms, the Bose Einstein condensation. Atom lasers: basic ideas with illustrations.

12 Hours

#### **Unit III**

**Diatomic rotational spectra and structure:** General features of observed spectra of typical diatomic molecules in Far IR(microwave) and due to Raman scattering; empirical series for the observed wave numbers in both IR and Raman spectra. Diatomic molecule as rigid and non rigid rotator models: energy levels, eigenfunctions, selection rules, IR spectra and correlation with empirical series and illustrations. Raman scattering and spectra due to the rigid and non rigid rotator: energy levels, eigenfunctons, selection rules, spectra and correlation with empirical series and illustrations.

12 Hours

#### **Unit IV**

**Diatomic vibrational spectra and structure:** General features of observed spectra of typical diatomic molecules in Near IR and due to Raman scattering; empirical series for the observed wave numbers in both IR and Raman spectra. Diatomic molecule as Harmonic and Anharmonic oscillator models: energy levels, eigenfunctions, selection rules, IR spectra and correlation with empirical series and illustrations. Raman scattering and spectra due to Harmonic and Anharmonic

oscillator models: energy levels, eigenfunctions, selection rules, spectra and correlation with empirical series and illustrations. The vibrating rotator model: energy levels, selection rules, IR and Raman spectra, IR fine structure spectrum of a rotation vibration band and correlation with empirical series.

After successful completion of this course a student will be able to:

- Describe the basic properties of nucleus, its structure and different models that explain the static and dynamical properties of a nucleus.

- Understand the phenomenon of radioactive decays of alpha and beta particles and gamma rays, their detailed formalism and outcomes.
- Acquire knowledge about various type of radiation detectors used in nuclear physics experiments, unique properties of different detectors and their applications.
- Differentiate between different types of nuclear reactions, relevant aspects associated with nuclear reactions and kinematics of such reactions.
- Learn about conditions of controlled chain reaction in different nuclear reactors. Know about different elementary particles their classifications and quark model to understand the fundamental forces of nature and classification.
- Understand the stopping power of different energetic charged particles in a medium and mechanisms of interaction of gamma photon with matter.
- Understand the trace elemental analysis and applications of radioisotopes in cancer treatment, agriculture and industry.

#### **Revised curriculum with changes/ additions/ modifications highlighted\***

##### **Unit I**

**Basic Properties:** Binding Energy and separation energy. Radius of nucleus by scattering of high energy neutrons, by X rays from muonic atom and by high energy electron scattering method.

**Nuclear spin and magnetic moment:** Spin and magnetic moment of odd A nucleus. Experimental determination of magnetic moment by Rabi's atomic beam method.

**Nuclear quadrupole moment:** Electric quadrupole moment of nucleus (Prolate and Oblate) qualitative

**Nuclear models:** Liquid drop model, stability against beta decay, stability against spontaneous fission, Fermi gas model, Fermi energy and kinetic energy, nuclear shell model and magic numbers.

12 Hours

##### **Unit II**

**Alpha decay:** Gamow's theory of alpha decay, quantum mechanical tunneling, relation between mean life and decay energy. Hindrance factor.

**Beta decay:** Energetics of beta decay, continuous beta ray spectrum, neutrino hypothesis, Fermi's

theory of beta decay (derivation), Fermi Kurie plot, non conservation of parity in beta decay

**Gamma decay:** Gamma transitions in nuclei and classifications. Internal conversion(qualitative)

**Detectors:** Gas filled detector, proportional counter, NaI(Tl) scintillation gamma ray spectrometer, semiconductor detector for detection of X ray and gamma radiation.

12 Hours

### Unit III

**Nuclear Reaction:** Types of nuclear reactions. conservation laws, laboratory and center of mass systems. Q value of a nuclear reaction and relation between Q value and energy of outgoing particle, threshold energy. Compound nucleus model and its experimental verification. Briet Wigner formula (qualitative).

**Reactor Physics:** Condition for controlled chain reaction, four factor formula, thermal reactor, fast breeder reactor.

**Elementary particles:** Fundamental interactions and their general features, conservation laws, classification of elementary particles as leptons, mesons and baryons. Quark model (Qualitative).

12 Hours

### Unit IV (Modified or Improved)

**Interactions of gamma rays and charged particles with matter:** Photoelectric effect, Compton effect and pair production, Mass attenuation co efficient of gamma rays. Mossbauer effect; Resonance scattering of gamma rays, experimental technique, simple applications. Energy loss of heavy charged particles; ionization, radiation processes, Bethe Bloch formula, applications. Energy loss of fast electrons; ionization, excitation and radiation process (Bremsstrahlung).

**Application of Nuclear Physics:** Trace elemental analysis and alpha decay applications, applications of radioisotopes in cancer treatment, agriculture and industry.

Credits per week: 04

### **Course Outcomes (COs):**

At the end of the Course students will learn:

- How to formulate the foundational aspects of quantum mechanics in the formalism of linear vector algebra.
- How to use different approximate methods for solving higher problems.
- How the different aspects of angular momentum can be used in theoretical models to understand variety of physical problems.

- How the synthesis of two fundamental theories – theory of relativity & quantum mechanics – leads to enhanced understanding of new major results in agreement with experiment.

## **Pre-revised curriculum**

### **Unit I**

**Linear Vector Algebra:** Linear Vectors space, Orthonormality, linear independence. Operators Eigenvalues, eigenvectors; Hermitian, Unitary and Projection operators. Bra and Ket notation for vectors. The elements of Representation Theory. Idea of Measurements, Observables and generalized uncertainty relation. Coordinate and momentum representations. Quantum Poisson Bracket.

**Quantum Dynamics:** Schrödinger and Heisenberg pictures; Interaction picture; the Heisenberg equation of motion. Linear harmonic oscillator problem by matrix method.

12 Hours

### **Unit II**

**Angular Momentum:** Introduction, angular momentum operator and its representation, Eigen values and eigen functions of  $L^2$ , commutation relations, Angular momentum and rotations. Bra and Ket representation, Eigen values, ladder operators, Eigenvectors of  $J^2$  and  $J_z$ . Angular momentum matrices for  $j=1/2$  and  $j=1$ . Pauli wavefunction and equation, Theory of addition of two angular momenta, Clebsch Gordan coefficients, allowed values of  $j$ , singlet and triplet states (qualitative).

12 Hours

### **Unit III**

**Approximation Methods:** First order stationary perturbation theory for a degenerate case; the secular equation; applications: particle in a infinitely deep potential well subject to perturbing potential and, Stark effect in hydrogen atom; Second order perturbation theory and its application to a linear harmonic oscillator subject to a potential. W.K.B. approximation: Connection formulas; application to a potential well and alpha decay. The Variation method and its application to the ground state of hydrogen atom and helium atom.

12 Hours

### **Unit IV**

**Relativistic Quantum Mechanics:** Klein–Gordon equation. Dirac’s relativistic equation for a free particle: commutation relations and matrices for and ; free particle solutions; probability charge and current densities; positive and negative energy states; the spin of the Dirac particle, Zitterbewegung. Dirac equation in electromagnetic potentials and magnetic moment. Dirac equation for a central field; the hydrogen atom: energy levels and fine structure (without derivation).

**Course Outcomes (COs):****(Transmission lines, waveguides and communication satellite)**

At the end of this course, the students will be able to-

- Learn transmission of electrical energy from one point to another and will be able to analyse the working of different types of transmission lines and also clear understanding of working of wired telephone communication system.
- Working of transmission lines at higher frequencies such as Radio Frequencies which helps student to appreciate the use of transmission lines in video/picture transmission.
- Get a comprehensive picture of signal transmission, analysing various waveguides as well as antennas.

- Gain knowledge of how satellites communicate with ground stations and help in appreciating various applications.
- Will be able to implement the above practically with the help of Numerical problems solving.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Transmission lines:** Line parameters, inductance and capacitance of open wire and coaxial line, line of cascaded sections, transmission line general solution, physical significance of the equations, the infinite line, wavelength, velocity of propagation, wave form distortion, distortion less line, telephone cable, induction loading of telephone cable, reflection of line not terminated with characteristic impedance, open and short circuited lines, insertion losses.

12 Hours

**Unit II**

**Lines at RF:** Parameters of open wire line at high frequencies, parameter of co axial cable at high frequencies, constants of lines of zero dissipation, voltage and current on dissipation less lines, standing wave ratio, impedance of open and short circuit lines, the  $\frac{1}{4}$  wave line,  $\frac{1}{2}$  wave line, impedance matching of  $\frac{1}{2}$  wave line, single stub matching, Circle diagram for the dissipationless line and its applications.

12 Hours

**Unit III**

**Waveguides:** Solutions of wave equations in rectangular and cylindrical coordinates, TE and TM modes in rectangular and cylindrical wave guides, characteristics of rectangular and circular wave guides.

**Antennas:** Hertzian dipole, Current and voltage distributions Resonant antennas, radiation patterns, and length calculations, Nonresonant antennas, Antenna gain and effective radiated power, Radiation measurement and field intensity, Antenna resistance, Bandwidth, beam width, and polarization, Ungrounded antennas, Grounded antennas, Grounding systems, Effects of antenna height, loop antennas, phased arrays, antenna as aperture, different types of apertures, Principles of pattern multiplication, phased arrays, Yagi Uda antenna, helical antenna.

12 Hours

**Unit IV**

**Satellite communication:** Introduction, Kepler's laws, orbits, geostationary orbit. Power systems, attitude control, satellite station keeping, antenna look angles, limits of visibility, frequency plans and polarization, transponders, up link and down link power budget calculations, digital carrier transmission, multiple access methods, fixed and mobile satellite service, earth stations, INSAT.

**Course Outcomes (COs):****(Electron Transport in Solids & Lattice Vibration)**

The specific outcomes of this course are as under:

- The effect of periodic structure a lattice on the electron energy states can be learnt.
- The concept of Fermi surface is important in the understanding the properties of crystalline materials. The can be thoroughly understood by studying this course.
- The quantization of lattice vibrations that leads to formation of quantum particle that is phonon can be understood.
- The course helps to apply the Boltzmann transport equation to understand the charge transport mechanism in metals and semiconductors.

**Revised curriculum with changes/ additions/ modifications highlighted\*****Unit I**

**Periodic Structures:** Reciprocal lattice and its properties, periodic potential and Bloch theorem, reduction to Brillouin zone, Born von Karman boundary conditions. Counting of states.

**Electron States:** Nearly free electron model, discontinuity at zone boundary, energy gap and Bragg reflection. Tight binding method, band width and effective mass in linear lattice and cubic lattices. APW and k.p. methods of band structure calculations.

12 Hours

## Unit II

**Fermi surface Studies:** Extended, reduced and periodic zone schemes. Construction of Fermi surface in square lattice, Harrison construction, slope of bands at zone boundary, electron orbits, hole orbits and open orbits. Experimental methods: Electron dynamics in a magnetic field, cyclotron frequency and mass, cyclotron resonance. Quantization of orbits in a magnetic field, Landau quantization, degeneracy of Landau levels, quantization of area of orbits in  $k$  – space, de Hass-van Alphen effect, external orbits.

12 Hours

## Unit III

**Electrical Transport in Metals and Semiconductors:** Boltzmann equation, relaxation time approximation, electrical conductivity, thermal conductivity, thermoelectric effects Calculation of relaxation time, scattering by impurities and lattice vibrations, Mattheisen's rule, temperature dependence of resistivity, residual resistance.

12 Hours

## Unit IV

**Quantization of lattice vibrations and phonons:** Potential and kinetic energies in terms of generalized coordinates and momenta, Hamiltons equations of motion, quantization of normal modes.

**Elastic properties of solids:** Stress and strain tensors, elastic constants and Hooke's law, strain energy, reduction of elastic constants from symmetry, isotropy for cubic crystals, technical moduli and elastic constants. Propagation of long wavelength vibrations. Experimental determination of elastic constants by ultrasonic interference method.

### Course Outcomes (COs):

The specific outcomes of this course are as under:

- Students will learn application of theoretical models to the interpretation of atomic spectra in agreement with experiment.
- Electronic structure of atoms under the influence of electric & magnetic fields.
- Application of theoretical models to the interpretation of diatomic molecular states, electronic, vibrational & rotation spectra in agreement with experiment.
- Relevance of these spectra in understanding atmosphere, comets, stars and intergalactic matter

### Revised curriculum with changes/ additions/ modifications highlighted\*

#### Unit I

**One electron atoms: Fine structure and Hyperfine structure:** Fine structure of hydrogenic atoms (quantum mechanical treatment): energy shifts due to relativistic and spin orbit corrections, fine structure splitting (hydrogen atom), fine structure and intensities of spectral lines. The Lamb shift.

**Hyperfine structure and isotope shifts:** magnetic dipole hyperfine structure; energy shift, hyperfine structure multiplet, hyperfine transitions in hydrogen, isotope shift.

12 Hours

## Unit II

**Interaction of One electron Atoms with External Electric and Magnetic fields:** (Quantum mechanical treatment) The Stark effect-first order correction to energy and eigen states: splitting of the degenerate level of hydrogen; the Zeeman effect: Normal Zeeman effect-magnetic interaction energy, selection rules, Lorentz triplet, polarization states; the Paschen-Back effect (qualitative); anomalous Zeeman effect magnetic interaction energy, selection rules, splitting of levels in hydrogen atom.

12 Hours

## Unit III

**Elementary discussion of electronic states:** Electronic energy and Total energy, Born-Oppenheimer approximation. Symmetry properties of electronic eigen functions.

Vibrational structure of electronic bands; Progressions and Sequences, isotope effect, Deslandres' table; Intensity distribution in the vibrational structure of electronic bands; the Franck-Condon principle (absorption), Dissociation energy.

MO theoretical treatment of  $\text{H}_2^+$  and  $\text{H}_2$  electronic states and correlation of states.

12 Hours

## Unit IV

**Finer details about electronic states and electronic transitions:** Coupling of Rotation and Electronic Motion: Coupling of rotation and electronic motion in diatomic molecules. Hund's coupling cases, Spin uncoupling, Lambda doubling, symmetry properties of rotational levels of  $\Sigma$  and  $\Pi$  electronic states.

Types of allowed electronic transitions; selection rules, Rotational structure of bands due to  $\Sigma-\Sigma$ ,  $\Pi-\Sigma$ ,  $\Sigma-\Pi$  and  $\Pi-\Pi$  transitions of singlet multiplicity, P,Q,R branches; the Fortrat diagram; combination relations; evaluation of rotational constants.

Teaching hours per week: 4

No. of Credits: 4

### **Course Outcomes (COs):**

After completing this course, the students should be able to:

- Learn the scattering phenomenon using high energy electrons on nucleus to understand the electric and magnetic form factors of protons, and magnetic form factor of neutron.
- Understand electric quadrupole moment due to single nucleon in a state  $J$  and magnetic dipole moment for odd proton and odd neutron using extreme single particle model.
- Know and learn about the theory of deuteron, explore its ground state properties of and applications with square well potential.
- Know the range of tensor interaction using quadrupole moment to understand the saturation of nuclear forces.
- Understand the neutron-proton scattering and concept of scattering length and its effective range theory along with spin dependence of nuclear force.
- Learn the effect of Coulomb and nuclear scattering, and Meson theory of nuclear force.
- Understand the symmetry classification of elementary particles and apply the Gellmann Nishijima and Gell-Mann-Okubo formula to solve numerical problems.
- Learn the basics of strong interactions and quark structures, experimental support for quark model and quark dynamics.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Basic Properties:** Scattering of high energy electrons by nucleus; Expression for Mott Scattering, differential cross section, form factor, charge distribution in nuclei.

Scattering of high energy electrons by nucleons; Expression for Rosenbluth formula, electric and magnetic form factors of protons, the magnetic form factor of neutron, their distribution in nucleon. . **(Modified)**

**Electric quadrupole moment:** Expression for axial quadrupole moment, quadrupole moment of spheroidal nucleus. Quadrupole moment due to single nucleon in a state J.

**Magnetic dipole moment:** Nuclear g factor for neutron and proton, expression for g factor for a nucleon in a state J in special cases for odd proton and odd neutron on extreme single particle model, Schmidt limits.

12 Hours

## Unit II

**Nuclear forces:** Characteristics of nuclear forces, deuteron problem, basic properties, ground state of deuteron for square well potential, relation between the range and depth of potential. Non-existence of excited states, basic properties of non central force, deuteron in mixture of S and D states using magnetic moment. Range of tensor interaction using quadrupole moment, saturation of nuclear forces. **(Modified)**

12 Hours

## Unit III

**Nucleon-Nucleon Scattering:** n-p scattering, partial wave analysis, scattering of neutron by hydrogen molecules: ortho and para hydrogen, spin dependence of nuclear force, effective range theory for n-p scattering. Qualitative features of p-p scattering, effect of Coulomb and nuclear scattering. High energy n-p and p-p scattering (qualitative). Meson theory of nuclear force: Yukawa and pseudo scalar theory, one pion exchange potential.

12 Hours

## Unit IV

**Elementary Particles:** Pion-nucleon scattering and its resonances. Strange particles: associated Production-strangeness quantum number, Gell-Mann and Nishijima formula, Kaons, lambda, sigma, omega hyperons. Symmetry classification of elementary particles: SU(3) symmetry and eight-fold way, Gell-Mann Okubo formula, Weight diagram, discovery of  $\Omega^-$  particle.

**Quark Model:** fundamental representation of SU(3) and quarks, experimental support for quark model, quark structure of mesons and baryons, color quark and gluons, quark dynamics, charm, beauty and truth quarks, grand unification theory. **(Modified)**

At the end of this course, the students will be able to-

- Get a clear picture of various transducer based electronic instruments used for measuring various physical quantities such as light, pressure, temperature, humidity, etc.
- Obtain a detailed knowledge of role of technology in medicine, biomedical signals and medical instrumentation system such as ECG, EEG, EMG, MRI, etc.
- Learn classification of signals and systems and various mathematical techniques

employed to study and analyse these.

- A detailed knowledge about conversion of signals from frequency domain to time domain and vice-versa, detailed mathematical background for resolving the signals in both domains.
- Will be able to implement the above practically with the help of Numerical problems solving.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Basic concepts of measurements & instruments:** Static characteristics of instruments, accuracy & precision, sensitivity, reproducibility, errors, Transducers, classification & selection criteria, principles of piezoelectric, photoelectric, thermoelectric transducers, resistance temperature transducers (RTD), Thermister, strain gauge, load cells, LVDT. Digital voltmeter, digital multimeter, Q meter, Electronic LCR meter, Frequency & time interval counters.

12 Hours

#### **Unit II**

**Biomedical Instrumentation:** Role of technology in medicine, Developments in biomedical instrumentation, physiological systems of the body, sources of biomedical signals, basic medical instrumentation system, performance requirements of medical instrumentation systems, intelligent medical instrumentation systems, consumer and portable medical equipment, implantable medical devices, micro-electro mechanical systems (MEMS), wireless connectivity in medical instruments, electrocardiograph (ECG), vector cardiograph (VCG), phonocardiograph (PCG), digital stethoscope, electroencephalograph (EEG), electromyography, magnetic resonance imaging (MRI), real-time ultrasonic imaging systems. pace makers, defibrillators.

12 Hours

#### **Unit III**

**Continuous time signals:** Classification of signals, continuous time signals, discrete time signals, standard test signals, operations on signals. Definition of a system, classification of system, examples of systems. Classification of system, Continuous time systems defined by an input/output differential equation, system modeling, zero input response zero state response and causality, unit impulse response, convolution, convolution integral and properties, system stability. Discrete time systems, difference equation, initial conditions and iterative solution, zero input response, unit impulse response, zero state response, discrete time convolution, properties of convolution sum, convolution examples, system stability, numerical convolutions.

12 Hours

## Unit IV

**Transform domain representation of signals:** Fourier series representation of periodic signals, exponential form of the Fourier series, aperiodic signal representation, Fourier transform, transforms of some useful functions, properties, generalized Fourier transform. Computations of output response via the Fourier transform, analysis of ideal filters, amplitude modulation, angle modulation. Discrete time Fourier transform, discrete Fourier transform, system analysis via the DTFT and DFT.

#### **(Magnetism & Dielectrics)**

The specific outcomes of this course are as under:

- The classification of magnetic materials and Weiss molecular field theory of

ferromagnetism can be understood.

- It clears the concept of formation of magnons at very low temperature in a ferromagnetic material and their behavior through Bloch  $T^{3/2}$  law will be evident.
- Other class of magnetic materials like anti-ferromagnetic and ferromagnetic can be understood.
- The significance of dielectric materials and their associated phenomena such as dipolar polarizability, ferroelectrics and piezoelectric can be learn.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Ferromagnetism:** Review of Weiss theory of ferromagnetism, its successes and failures, Heisenberg exchange interaction, exchange integral, exchange energy, spin waves (one dimensional case only), quantization of spin waves and magnons, density of modes, thermal excitation of magnons and Bloch  $T^{3/2}$  law, specific heat using spin wave theory. Origin of ferromagnetic domains, hysteresis curve, magnetocrystalline anisotropy energy, Bloch wall formation.

**Antiferromagnetism:** Characteristic property of antiferromagnetic substance, Neutron diffraction experiment. Two sub lattice model molecular field theory of antiferromagnetism, Neel temperature, Susceptibility below and above Neel temperature.

**Ferrimagnetism:** Ferrimagnetic order, ferrites, Curie temperature and susceptibility of ferrimagnets.

12 Hours

#### **Unit II**

**Magnetic Resonance:** Basic principles of paramagnetic resonance, spin spin and spin–lattice relaxation, susceptibility in a.c. magnetic field power absorption, equations of Bloch, steady state solutions, determination of g factor, line width and spin –lattice relaxation time, electron paramagnetic resonance and nuclear magnetic resonance. Effect of crystal field on energy levels of magnetic ions (qualitative). Spin Hamiltonian, zero field splitting.

**Novel Magnetic Materials and Devices:** Magneto optic effect: Kerr and Faraday. The basic concepts of Giant Magnetoresistance (GMR) and Colossal Magnetoresistance (CMR), applications to memory storage, actuators and sensors.

12 Hours

#### **Unit III**

**Dielectrics:** Review of basic formulae, dielectric constant and polarizability, local field, Clausius Mossotti relation, polarization catastrophe. Sources of polarizability, Dipolar polarizability: dipolar dispersion, Debye's equations, dielectric loss, dipolar polarization in solids, dielectric relaxation. Ionic polarizability. Electronic polarizability: classical treatment, quantum theory, interband transitions in solids.

12 Hours

#### Unit IV

**Ferroelectrics:** General properties of ferroelectrics, classification and properties of representative ferroelectric crystals, dipole theory of ferroelectricity, dielectric constant near Curie temperature, microscopic source of ferroelectricity, Lyddane –Sachs Teller relation and its implications, thermodynamics of ferroelectric phase transition, ferroelectric domains, piezoelectricity and its applications.

(Nuclear Instruments and Techniques)**

Teaching hours per week : 4  
No of Credits:4

**Course Outcomes (COs):**

After completing this course, the students should be able to

- Learn about the classification, mechanisms, properties and factors affecting performance of scintillator detectors.
- Learn about the differences between single channel analyzer and multichannel analyzer in NaI(Tl) gamma ray spectrometers and to estimate calibration constant.
- Know the basics, construction, working, advantages and disadvantages of semiconductor detectors and types and characteristics of solid-state detectors.
- Understand about the various types of nuclear accelerators and their basic components and types of accelerations and principles of operation.
- Understand the basic principles, construction and working of energy and wavelength dispersive x-ray fluorescence spectrometers.
- Learn the basics and working principles of positron annihilation spectroscopy and perturbed angular correlation for study of condensed matter.
- Learn about the neutron classification, sources of neutrons and neutron detectors, especially BF<sub>3</sub> counter and <sup>3</sup>He based neutron detector.
- Understand the theory of neutron diffraction of powder and single crystals, neutron diffraction patterns of superconductors and magnetic materials.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Nuclear Detectors:** Scintillation detector, different types of scintillators, photomultiplier tubes;

gain and types of photomultiplier tubes, Preamplifiers; charge sensitive, voltage sensitive and current sensitive preamplifiers, Amplifiers; linear and spectroscopy amplifiers, Single channel analyzers; integral, window and normal modes, Multichannel analyzer; various types of ADC, memory, linear gate and working, NaI(Tl) gamma ray spectrometer; Calibration, photopeak, Compton edge and back scattered peak, single escape and double escape peak. Role of thickness of the crystal for detecting the radiation.

**Semiconductor Detector:** Relation between applied voltage and depletion layer thickness, Lithium drifted germanium detector, High purity germanium detector, Lithium drifted silicon detector, position sensitive silicon detector. Principle and working of magnetic spectrometer and Cherenkov detector.

12 Hours

## Unit II

**Particle Accelerators and Applications:** Basic components of accelerator, types of accelerations, principles of operation.

**Ion sources:** Duoplasmatron ion source and electron cyclotron resonance (ECR) ion source.

**Accelerators:** Principle and working of electrostatic accelerators, azimuthally varying field (AVF) cyclotron and pelletron accelerator, RIB accelerator, Microtron, Super Conducting Cyclotron, synchrotron source.

**Application of ion beams:** Rutherford Backscattering Spectroscopy (RBS), Elastic Recoil Detection (ERD), Nuclear Reaction Analysis (NRA).

12Hours

## Unit III

**X – ray Fluorescence Spectroscopy:** X ray Fluorescence; Energy and wavelength dispersive X – ray fluorescence spectrometers. microXRF, Total XRF and their applications

**Positron Annihilation Spectroscopy:** Principles, positron sources and experimental arrangements, Angular correlation of annihilation radiation (ACAR), positron annihilation life time (PALT) measurement. Applications

**Perturbed angular correlation (PAC):** PAC sources, experimental arrangement, magnetic dipole interaction, electric quadrupole interaction, applications.

12 Hours

## Unit IV

**Neutron Physics:** Basic properties of neutron, production of neutrons, detection of slow and fast neutrons; BF<sub>3</sub> counter and <sup>3</sup>He based neutron detector, scintillation detectors for fast neutrons, detection of ultra high energy neutrons, cloud chamber as a neutron detector, the crystal monochromator, neutron diffraction (theory), powder and single crystal neutron diffraction, neutron diffraction from magnetic materials, neutron diffraction in fluids, reflection of neutrons, polarization of neutrons, small angle neutron scattering (SANS).

Upon completion of this course, the students will be able to-

- Design and learn implementing the operational amplifier IC 741 based wave form generator circuits
- Design and learn implementing op-amp 741 based instrumentation amplifier and characterize it
- Design and learn implementing op-amp based twin-T and notch filter circuits.
- Implementation of 2's complement adder and subtractor and bidirectional shift registers

**Revised curriculum with changes/ additions/ modifications highlighted\***

1. Square, triangular and ramp generation using op amp
2. Instrumentation amplifier gain, CMRR and input impedance
3. Active notch and twin T filter realization using Op Amp
4. Precision half wave and full wave rectifier using Op amp
5. 2's complement adder and subtractor
6. 4 – bit bidirectional shift register

Teaching hours per week: 4  
Number of Credits: 4

**Course Outcomes (COs):**

The specific outcomes of this course are as under:

- Understand the basics of Electrostatics, Poisson Laplace equations, boundary conditions and electrostatic energy in dielectric media.
- Learn about Magneto statics, current density, continuity equation, magnetic moment and energy in the magnetic field.
- Understand the basics of electrodynamics, faradays laws of induction, displacement current, Maxwell's equations, conservation of energy and momentum in electromagnetic fields.
- Learn about electromagnetic waves, propagation of waves in linear media, reflection and transmission at normal and oblique incidence, skin depth and refraction at conducting surface.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Electrostatics:** Divergence and curl of electrostatic field, Gauss law in integral and differential forms, Poisson and Laplace equations, Boundary conditions and uniqueness theorem, electrostatic potential energy and energy density of a continuous charge distribution. Multipole expansion of the potential and energy of a localized charge distribution, monopole and dipole terms, electric field of a dipole, dipole dipole interaction. Electrostatic fields in matter, polarization, macroscopic field equations, electrostatic energy in dielectric media.

12 Hours

**Unit II**

**Magnetostatics:** Current density, continuity equation, magnetic field of a steady current, the divergence and curl of  $\mathbf{B}$ , Ampere's law, magnetic vector potential, multipole expansion of vector potential of a localized current distribution, magnetic moment. Torques and forces on magnetic dipoles, effect of a magnetic field on atomic orbits. Magnetic fields in matter, macroscopic equations, magnetostatic boundary conditions, magnetic scalar potential. Energy in the magnetic field.

12Hours

### Unit III

**Electrodynamics:** Faraday law of induction, displacement current, Maxwell's equations. Vector and scalar potentials. Gauge transformations, Lorentz gauge, Coulomb gauge. Continuity equation, Poynting's theorem, momentum, Maxwell's stress tensor, conservation of energy and momentum in electromagnetic fields.

**Electromagnetic Waves:** Propagation of waves in linear media, reflection and transmission at normal and oblique incidence, Electromagnetic waves in non conducting and conducting medium, skin depth, reflection at conducting surface.

**Wave guides:** Fields at the surface and within a conductor, modes in rectangular wave guide, TE waves in a rectangular wave guide, Co axial transmission line and cylindrical cavities.

12 Hours

### Unit IV

**Electromagnetic radiation:** Retarded Potentials, Lenard Wiechert potentials, fields of a moving point charge. Electric dipole radiation, Magnetic dipole radiation, Power radiated by a point charge, Larmor formula, Power radiated by a point charge with collinear velocity and acceleration, Bremsstrahlung radiation, radiation from a charged particle moving in a circular orbit, cyclotron and synchrotron radiation.

**Plasma Physics:** Plasma behavior in magnetic field, plasma as a conducting fluid magnetohydrodynamics, magnetic confinement Pinch effect.

### **Course Outcomes (COs):**

The specific outcomes of this course are as under:

- Understand the basic postulates of statistical mechanics, different types of ensembles, fundamental differences between microstates and macrostates.
- Learn about different types of partition functions for the system of particles and apply these to calculate important thermodynamical quantities.
- Learn the fundamental differences between classical and quantum statistics and learn about postulates of quantum statistical mechanics.
- Formulate the quantum statistical distribution laws, viz. Fermi-Dirac (FD) and Bose-Einstein (BE) statistics and origin of Bose-Einstein condensation and its applications.
- Understand fluctuations in ensembles and quantum gases and their analysis.
- Describe the theoretical basis of Brownian motion on the basis of Langevin approach.
- Understand the concept of random walk, Einstein relation for mobility and diffusion, time dependence of fluctuations, their spectral analysis and applications in noises.
- Understand the reversible and irreversible thermodynamic processes, analysis of Onsager reciprocity relations in thermoelectric phenomena.
- Understand the Saha theory of ionization of a gas in thermal equilibrium to the temperature and pressure.
- Understand superfluid properties and quantum theory of  $^3\text{He}$  and mixture of  $^3\text{He}$ - $^4\text{He}$ .

## **Pre-revised curriculum**

### **Unit I**

**Classical Statistics:** Basic postulates of statistical mechanics, phase spaces, Liouville equation; concept of ensembles, postulate of equal a priori probability; microstates and macrostates; general expression for probability; canonical ensemble: most probable distribution of energies, thermodynamic relations in canonical ensemble; canonical partition function; micro canonical ensemble; grand canonical ensemble, grand partition function. Partition function for the system and for the particles, translational partition function; Gibbs paradox: Sackur-Tetrode equation; Boltzmann equipartition theorem; rotational partition function; vibrational contribution to thermodynamic quantities; electronic partition function.

12 Hours

### **Unit II**

**Quantum Statistics:** Postulates of quantum statistical mechanics, ideal quantum gases, quantum statistics in classical limit, symmetric and antisymmetric wave functions for indistinguishable particles; Bose-Einstein and Fermi-Dirac distributions, ideal Bose and Fermi gases, their properties at high temperature and densities, weak and strong degeneracy of perfect gases, Bose-Einstein condensation, black body radiation, phonons and specific heats of solids.

12 Hours

### **Unit III**

**Fluctuations and Brownian motion:** Fluctuations in canonical, grand canonical and microcanonical ensembles, number fluctuations in quantum gases. Brownian motion: Langevin equation, random walk problem. Diffusion: Einstein relation for mobility. Time dependence of fluctuations: power spectrum, spectral density; persistence and correlation of fluctuations; Wiener-Khinchin theorem, Johnson noise, Nyquist theorem; shot noise; Fokker-Planck equation.

12 Hours

### **Unit IV**

**Irreversible thermodynamics:** Reversible and irreversible processes, Onsager reciprocity relations and their derivations; thermoelectric phenomena, linear response theory, Kubo relations, fluctuation dissipation theorem; Saha theory of ionisation.

**Liquid helium:** phase diagram, superfluid properties, two fluid model, thermo-mechanical, fountain and mechano-caloric effects, quantum theory of superfluid  $^3\text{He}$  and mixture of  $^3\text{He}$ - $^4\text{He}$ .

#### **PG85T403 (Course PHST 4.3): Electronics & Communication - III**

Teaching hours per week: 4

No. of credits: 4

### **Course Outcomes (COs):**

At the end of this course, the students will be able to-

- Understand the architecture of 8085 microprocessor which completes the basic foundation necessary to understand how CPU works and communicates with RAM, ROM and external devices.
- Get information about execution of each command written in language form. This includes knowledge of arithmetic operations, looping, stacking, etc.
- Understand Interfacing peripherals of 8085 microprocessor with 7-segment display, analog to digital system vice-versa, additional input/output devices etc., incorporated to account the applications.
- Gain knowledge about 8051 microcontroller architecture to programming, the complete idea of execution of commands, instructions to interfacing with external input/output devices.
- Will be able to implement the above practically with the help of Numerical problems solving.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Microprocessor Architecture:** Introduction, microprocessor and its operations, architecture of 8085 microprocessor, memory, input and output devices, basic interfacing concepts, memory interfacing, interfacing input and output devices.

12 Hours

**Unit II**

**Programming of 8085:** Introduction, instruction classification, instruction format, over view of instruction set of 8085, data transfer operations, arithmetic operations, logic operations, branch operation; Instructions for Looping, counting, and indexing, additional data transfer instructions, 16-bit arithmetic operation, logic operations: rotate, compare; stack, subroutine, conditional call and return instructions.

12 Hours

**Unit III**

Interfacing peripherals and applications: The 8085 interrupt, multiple interrupts and priorities, additional 8085 interrupts: TRAP, RST 7.5, 6.5 and 5.5, triggering levels, additional I/O concepts, DMA; Interfacing A/D and D/A converters, handshaking and polling, the 8155 multipurpose programmable interfacing device; interfacing 7-segment display, the 8259 timer as square wave generator.

12 Hours

**Unit IV**

Microcontroller: 8051 architecture: 8051 microcontroller hardware-I/O pins, ports and circuits- External memory-Counter and Timers-Serial data I/O Interrupts. 8051 programming: instruction syntax-moving data-logical operations-arithmetic operations- branching instructions.

12 Hours

#### **Course Outcomes (COs):**

The specific outcomes of this course are as under:

- The course offers a good understanding on the basics of semiconductors.
- Theoretical understanding of charge transport in semiconductors can be understood.
- It also helps to clear the basic concepts on the effect of external fields on the electron transport in a crystalline state.
- It makes is clear how the working of basic devices like pn-junction, Gunn diode, laser diode etc. can be understood.
- Finally, the course gives an idea on the importance of low dimensional semiconductors, their synthesis and the formation of electronic devices.

#### **Revised curriculum with changes/ additions/ modifications highlighted\***

##### **Unit I**

**Semiconductors:** General properties of semiconductors, Elemental and compound semiconductors, band structure of real semiconductors. Intrinsic semiconductors: Carrier concentration, Fermi energy, extrinsic semiconductors: Binding energy of impurity, impurity levels, Population of impurity levels, carrier concentration, Fermi energy and its dependence on impurity concentration and temperature.

12 Hours

##### **Unit II**

**Transport in Semiconductors:** Electrical conductivity and mobility, their dependence on temperature and scattering mechanisms, energy gap determination. Diffusion, Einstein relation,

diffusion equation and diffusion length.

**Magnetic Field Effects:** Hall effect, Hall resistance, magnetoresistance (qualitative), cyclotron resonance and effective mass determination.

**Optical Properties:** Interband and intraband absorption, fundamental absorption, absorption edge, exciton absorption, free carrier absorption, impurity involved absorption. Photoconductivity, luminescence.

12 Hours

### Unit III

**Low-dimensional semiconductor structures:** Metal-oxide-semiconductor junction, Inversion layer, quantum well. Modulation doping, quantum well wire, quantum dot and superlattice. Two – dimensional electron gas, energy levels and density of states. Quantum Hall effect (qualitative)

**Thin Film Physics:** Preparation : Thermal evaporation spray pyrolysis and spin coating. Epitaxial growth and Chemical vapor deposition, methods. MBE, MOCVD, Thickness measurements: Electrical methods, (resistivity and capacitance measurements), Optical methods (optical absorption and interference) and vibrating quartz crystal method.

12 Hours

### Unit IV

**Semiconductor Devices:** p-n junction in equilibrium Metal-oxide-semiconductor junction equilibrium : Space charge region, barrier potential, barrier thickness, contact field, junction capacitance and its determination, potential diagram of p-n junction. p-n junction in non – equilibrium: generation and recombination current. Continuity equations, current voltage relation, saturation current, tunnel diode, Gunn diode, semiconductor lasers, LED and photocell.

#### **PG85T403 (Course PHST 4.3): Atomic and Molecular Physics - III (Molecular Spectroscopy of Polyatomic molecules)**

Teaching hours per week: 4  
No. of credits: 4

### Course Outcomes (COs):

At the end of this course, students will learn:

- Interpretation of vibrational IR and Raman spectra of polyatomic molecules.
- Methods of determining vibrational properties of polyatomic molecules based on IR and Raman spectra.
- How to apply combined analysis of vibrational & electronic spectra for characterizing vibrational properties that may be correlated to identification of molecules, structure and other phenomena.

### Revised curriculum with changes/ additions/ modifications highlighted\*

#### **Unit I**

**Molecular Symmetry:** Point Groups, symmetrically equivalent atoms.

**Rotational Spectra:** Classification of molecules as rotors: Linear, Symmetric top, Spherical top, Asymmetric top molecules. Energy levels: thermal distribution, symmetry properties and statistical weights of rotational levels, Spectrum; IR and Raman spectra.

12 Hours

#### **Unit II**

**Molecular Vibrations:** Separation of rotational and vibrational motions; the secular equation for small vibrations (classical treatment). Normal modes of vibration. Normal coordinates. Simple illustrations. Internal coordinates, symmetry co-ordinates, determination of number of normal co

ordinates (symmetry species). Potential energy functions and force fields.

12 Hours

### Unit III

**Vibrational Energy levels and Selection Rules:** The Schrodinger's vibrational wave equation. Energy levels, Vibrational Spectra and Degeneracy. Symmetry properties of wave functions, overtones, combinations, components of electric dipole moment, and the polarizability. Selection Rules for Infrared and Raman Spectra. The rule of mutual exclusion. Group frequencies; the Product rule; Fermi resonance.

12 Hours

### Unit IV

**Electronic Structure & Spectra:** Classification of Electronic States based on angular momentum, spin, multiplet components. Types of electronic transitions; Allowed transitions, general selection rules, spin selection rules. Forbidden transitions: Magnetic and electric quadrupole transitions.

12 Hours

**(Nuclear Structure and Nuclear Reactions)**

Teaching hours per week: 4

No of Credits: 4

**Course Outcomes (COs):**

After completion of this course, a student should be able to

- Learn the evidences for nuclear shell structure and understand the energy levels according to the infinite square well potential and harmonic oscillator potential.
- Get knowledge about the collective nuclear model, vibrational energy levels of even nuclei and rotational energy levels of deformed even-even nucleus.
- Know the concept of cross section and apply it to resonance theory of scattering and absorption and learn the Briet –Wigner formula for scattering and reaction.
- Understand the principle of detailed balance–optical model–mean free path – optical potential and its parameters for elastic scattering.
- Understand the plane wave Born approximation (PWBA) and its predictions of angular distributions, distorted wave Born approximation (DWBA) and spectroscopic factors.
- Learn the importance of heavy ion reactions, formation compound nucleus, fusion of heavy ions and formation of super heavy nuclei in heavy ion reactions.
- Understand the Feynman diagrams, leptonic, semi leptonic and non-leptonic processes, verification of electromagnetic and weak interactions.
- learn about the intermediate vector bosons: W and Z bosons, their masses and range of weak interactions, charged weak interactions of quarks: Cabibbo factor, CPT theorem

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Nuclear Models**

**Shell model:** evidences for nuclear shell structure-energy levels according to the infinite square well potential and harmonic oscillator potential, effect of spin orbit interaction, prediction of

ground state spin – parity of odd A nuclei and odd-odd nuclei – Nordheim's rules,

**Collective Model:** Evidences for collective motion, vibrational energy levels of even nuclei. Rotational energy levels of deformed even-even nucleus, moment of inertia-rigid body value, back bending, spectrum of odd A nuclei,

**Nilsson model:** Calculation of energy levels and prediction of ground state.

12 Hours

## Unit II

**Nuclear Reaction I:** Comparison of features of compound nucleus model and direct reaction model. Partial wave analysis of nuclear reactions, expressions for scattering and reaction cross sections and their interpretation – shadow scattering – resonance theory of scattering and absorption – overlapping and isolated resonance – Briet –Wigner formula for scattering and reaction shape of cross section curve near a resonance. Inverse nuclear reactions – principle of detailed balance–optical model–mean free path – optical potential and its parameters for elastic scattering.

12 Hours

## Unit III

**Nuclear Reaction II:** Transfer reactions – semi-classical description – plane wave Born approximation (PWBA) – its predictions of angular distributions – distorted wave Born approximation (DWBA)- spectroscopic factors – transfer reactions and the shell model.

**Heavy ion reactions:** Importance of heavy ion reactions, Elastic scattering; critical angle, deflection function, Rainbow scattering and diffraction.. Nuclear and Coulomb scattering and its experimental results, compound nucleus formation, formation of nuclear molecule, fusion of heavy ions and formation of super heavy nuclei in heavy ion reactions.

12 Hours

## Unit IV (Newly Added)

**Particle Physics:** Weak interactions Weak decays, neutral Kaons, the  $K_S$   $K_L$  systems, regeneration of short lived component of neutral kaons, lifetimes and cross sections, Feynman diagrams, leptonic, semi leptonic and non leptonic processes, verification of electromagnetic and weak interactions intermediate vector bosons, quark flavour changing interactions with examples, muon decay – Fermi's four particle coupling and modern perspective with a mediating vectorboson, W and Z bosons; their masses and range of weak interactions. Charged weak interactions of quarks: Cabibbo factor, GIM mechanism (Glashow Iliopoulos Miani mechanism) Neutral kaons: CP as a symmetry, CP violation in neutral kaon decay (Fitch Cronin experiment), CPT theorem (qualitative), evolution of a neutral kaon beam with time, regeneration experiments.

**Course Outcomes (COs):****( Amplitude, Frequency, Analog & Digital Modulation)**

- Upon completion of this course, the students will be able to-
- Get a complete knowledge of use of modulation in electronic communication, amplitude modulation, the instrumentation and techniques of amplitude modulation, transmitters and receivers used in amplitude modulation and their functioning.

- Understand theory of frequency modulation, FM instrumentation, its advantages over AM, experimental techniques of FM, etc.
- Learn the basics of pulse modulation, types of pulse modulation, pulse amplitude modulation, pulse position modulation, pulse width modulation and other methods that form basis of Digital Communication.
- Deal with communication techniques which lie in the base band region with explanation of inter symbol interference, pulse data transmission, scrambling and descrambling, pulse shaping, etc.
- Will be able to implement the above practically with the help of Numerical problems solving.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Amplitude Modulation:** Amplitude Modulation, Theory, Frequency spectrum of the AM wave, Representation of AM, Power relations in the AM wave, Generation of AM, Basic requirements, Modulated transistor amplifiers, Single Sideband Techniques, Evolution and Description of SSB, Suppression of Carrier, Effect of nonlinear resistance on added signals, balanced modulator, Suppression of unwanted Sideband, filter system, phase shift method, The "third" method, System evaluation and comparison, Vestigial sideband transmission, AM transmitter and receiver, TRF and super heterodyne receivers, SNR in DSBSC and SSBSC systems.

12 Hours

**Unit II**

**Frequency Modulation:** Theory of Frequency and Phase Modulation, Description of Systems, Mathematical Representation of FM, Frequency Spectrum of FM Wave, Phase Modulation, Intersystem Comparisons, Noise and Frequency Modulation, Effects of Noise on Carrier Noise Triangle, Pre emphasis and De emphasis, Comparison of Wideband and Narrowband FM, Stereophonic FM Multiplex System, Generation of Frequency Modulation, Direct Methods, Stabilized Reactance Modulator AFC, Indirect Method, Basic FM demodulators

12 Hours

**Unit III**

**Analog Pulse Modulation:** Sampling theorem for band pass signals, Pulse Amplitude modulation: generation and demodulation, PAM/TDM system, PPM generation and demodulation, PWM, Spectra of Pulse modulated signals, SNR calculations for pulse modulation systems. Waveform coding: quantization, PCM, DPCM, Delta modulation, Adaptive delta modulation Design of typical systems and performance analysis.

12 Hours

#### **Unit IV**

Pulse Shaping, Nyquist criterion for zero ISI, Signaling with duobinary pulses, Eye diagram, Equalizer, Scrambling and descrambling. Signal space concepts: geometric structure of the signal space, L2 space, distance, norm and inner product, orthogonality Base band pulse data transmission: Matched filter receiver, Inter symbol interference, Gram Schmidt Orthogonalization Procedure.

Digital modulation schemes: Coherent Binary Schemes: ASK, FSK, PSK, MSK. Coherent M-ary Schemes, Calculation of average probability of error for different modulation schemes.

The specific outcomes of this course are as under:

- The experimental discovery and various experimental properties of superconductors can be understood.

- The concept and predictions of fundamental BCS theory of superconductivity can be studied.
- The concepts, classification, and important properties of new materials like amorphous semiconductors, polymers and liquid crystals can be explored.
- Nanoscience is emerging branch of Physics, its concepts, importance, characterizations are studied and selected applications will be explored.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Superconductivity:** Occurrence of superconductivity, destruction of superconductivity by magnetic field, heat capacity and energy gap, microwave and infrared properties, type I and type II superconductors, high  $T_c$  superconductors (qualitative ideas only). Thermodynamics of superconductivity, London equations, coherence length, flux quantization in superconducting ring, duration of persistent current.

12 Hours

#### **Unit II**

**BCS Theory:** Attraction between Cooper – pairs, accomplishments of BCS theory.

**Tunneling:** Basic concepts of tunneling, metal-insulator tunneling, metal insulatorsuperconductor tunneling, supercondutror-insulator-superconductor tunneling, Cooper-pair tunneling, A. C. and D. C. Josephson effect, macroscopic quantum interference.

12 Hours

#### **Unit III**

**Amorphous Semiconductors:** Preparation of amorphous semiconductors, classification, band structure, electronic conduction, optical absorption, electrical switching (Ovonic diode).

**Polymers:** Basic concepts, classification of polymers, effect of temperature, mechanical properties of general polymers. Conducting polymers, classes, synthesis, charge transport mechanism.

**Liquid crystals:** Classification, orientational order and inter-molecular forces, magnetic effects, optical properties and general applications.

12 Hours

#### **Unit IV**

**Nanostructured materials:** Introduction, electronic and optical properties: quantum confinement effect. Synthesis of nanoparticles: gas phase and colloidal synthesis. Carbon based nanomaterials:

qualitative ideas of carbon nanotubes and graphene. Magnetic nanostructures. Applications of nanomaterials.

**Characterization techniques:** X-ray diffraction, optical spectroscopy, scanning electron and transmission electron microscopies. The basic concepts of scanning tunneling and atomic force microscopies.

### **Course Outcomes (COs):**

At the end of the course, students will learn:

- Principles, working and scientific and practical applications of different laser types.
- How design parameters will produce lasers.
- How intense lasers can be used to produce nonlinear optical effects & their

exploitation in the working of lasers.

- How high-resolution spectroscopy is achievable based on principles of nonlinear effects, lasers and physical optics.
- How nonlinear Raman effects can be produced by intense laser as radiation sources combined with physical optics. In addition, wide ranging applications in spectroscopy and other fields.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Laser Amplifiers:** Requirements for population inversions for Two , Three and Four level systems:necessary and sufficient conditions for laser action, threshold requirements for laser action with and without cavity, rate equations. Pumping requirements and techniques.

**Laser Resonators:** Longitudinal and transverse modes: Fabry Perot resonator, its cavity modes. Properties of modes: spatial dependence, frequency dependence and mode competition. Spherical, Plane parallel, confocal resonator and unstable resonators. Stability stability criteria, properties of Gaussian beams. Q switching and mode locking:general techniques and examples.

12 Hours

#### **Unit II**

**Lasers with low density gain media:** General description, laser structure, excitation mechanism and applications of Copper vapor laser, Helium-Cadmium laser, Argon and Krypton ion lasers. Nitrogen laser, Carbon-dioxide laser, Excimer laser, X-ray laser, and Free Electron laser.

12 Hours

#### **Unit III**

**Lasers with high density gain media:** General description, laser structure, excitation mechanism and applications of Dye lasers, Neodymium YAG and Glass lasers, Alexandrite laser, Titanium sapphire laser, Fiber lasers and semiconductor diode lasers(homo and hetero junction and quantum well lasers)

12 Hours

## Unit IV

**Nonlinear Optical Effects:** Wave propagation in an anisotropic crystal, Second harmonic generation, Phase matching, Parametric oscillation, Self focusing light.

**High Resolution Spectroscopy:** Idea of hole burning, the Lamb dip, Inverse Lamb dip, stabilization of frequency. Doppler free and Doppler limited Spectroscopy. Two photon spectroscopy.

**Laser Raman Spectroscopy:** Hyper Raman spectroscopy, Stimulated Raman effect, Inverse Raman effect, CARS (Coherent Anti Stokes Raman Spectroscopy).

### **Course Outcomes (COs):**

Upon completion of this course, a student should be able to

- Learn the theory of nuclear fission, evidence for the existence of second well in fission isomers, nuclear fission with heavy ions and nuclear fission-fission time scale.
- Understand the basic nuclear fusion processes, controlled thermonuclear reactions and magnetic confinement systems for controlled thermonuclear fusion.
- Learn the slowing down of neutrons by elastic collisions, logarithmic decrement in energy, thermalization, slowing down power and moderating ratio.
- Understand the theory of diffusion of neutrons, spatial distributions of neutron flux in different mediums, reflections of neutrons – Albedo.
- Learn about Fermi age equation, correction for absorption, resonance escape probability, pile equations, buckling: critical size for spherical and rectangular piles.
- Know the classification of beta transition on the basis of  $ft$  values and learn the selection rules, detection of neutrino and its properties.
- Learn the symmetry breaking in beta decay, the relevance of pseudoscalar quantities, Wu-Ambler experiment, fall of parity conservation and discovery of W and Z bosons
- Understand the gamma decay transition probability for single particle transition in nuclei-Weisskopf's estimates: comparison with experimental values.
- Learn the lifetime measurements and understand the angular correlation for dipole-dipole transitions, gamma-gamma correlation and polarization of gamma radiation.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Nuclear Fission:** Bohr-Wheeler theory of nuclear fission, saddle point, scission point, barrier penetration, shell correction to the liquid drop model, Strutinsky's smoothing procedure, evidence for the existence of second well in fission isomers. Nuclear fission with heavy ions. Nuclear fission-fission time scale.

**Nuclear Fusion:** Basic fusion processes, characteristics of fusion, fusion in stars. Controlled

thermonuclear reactions. magnetic pressure, pinch effect, magnetic confinement systems for controlled thermonuclear fusion.

12 Hours

## Unit II

**Slowing down of Neutrons:** Slowing down of neutrons by elastic collisions, – logarithmic decrement in energy, number of collisions for thermalization, slowing down power, moderating ratio.

**Neutron diffusion:** Elementary theory of diffusion of neutrons, spatial distributions of neutron flux (I) in an infinite slab with a plane source at one end (II) in an infinite medium with point source at the center – reflections of neutrons – albedo.

**Reactor Theory:** Slowing down density – Fermi age equation correction for absorption – resonance escape probability – the pile equations – buckling-critical size for spherical and rectangular piles – condition for chain reaction – the four factor formula – Classification of reactors – thermal neutron and fast breeder reactors.

12 Hours

## Unit III

**Beta decay:** Classification of beta transition on the basis of ft values, selection rules and shapes of beta spectra. Universal fermi interaction.. The neutrino in beta decay-inverse beta decay processes-detection of neutrino; Cowan and Reins experiment, determination of neutrino mass, different types of neutrinos, Symmetry breaking in beta decay- parity operation: relevance of pseudoscalar quantities. The Wu-Ambler experiment and fall of parity conservation. Discovery of W and Z bosons. Double beta decay, beta delayed nucleon emission .Elementary theory of K-electron capture.

12 Hours

## Unit IV

**Gamma decay:** Qualitative discussion of multiple radiation, selection rules, determination of gamma decay transition probability for single particle transition in nuclei-Weisskopf's estimates, comparison with experimental values. Elementary theory of internal conversion and discussion of experimental results. Lifetime measurements, the angular correlation for dipole-dipole transitions, gamma-gamma correlation studies. Polarization of gamma radiation.

### **Course Outcomes (COs):**

Upon completion of this course, the students will be able to-

- Implement 8085 microprocessor interfacing – stepper motor interface
- Carry out ADC and DAC circuit interfacing
- Implement 8085 Programming – mathematical operations, block transfer and sorting of 8-bit and 16-bit data
- Understand the use of code conversion methods
- Study 8085 interrupts and subroutines

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **(8085 Interfacing)**

1. Stepper motor interface
2. ADC and DAC circuit interfacing

#### **(8085 programming)**

1. Mathematical operations, block transfer and sorting of 8-bit data
2. Mathematical operations with 16-bit data
3. Code conversion methods
4. 8085 Interrupts and subroutines

**Course Outcomes (COs):**

The specific outcomes of this course are as under:

- Indexing of tetragonal and hexagonal patterns can experimentally realize.
- Precise lattice parameters on the experimentally recorded X-ray patterns can be studied.
- Characterization of solar cell, magnetic materials and skin depth in metals can be carried out.
- Many other experiments to measure the basic properties of dielectrics and ferroelectrics can be carried out under this course.

**Revised curriculum with changes/ additions/ modifications highlighted\***

1. Indexing of hexagonal systems.
2. Precise parameter determination:
  - a. Extrapolation method.
  - b. Cohen's method
3. Structure determination of CdTe.
4. Universal curves for ferromagnets
5. Determination of skin depth
6. Phase transition in ferroelectric crystals
7. Temperature dependence of susceptibility of a paramagnetic substance
8. Characteristics of a solar cell

9. Defect formation energy in metals
10. Diamagnetic susceptibility of water molecule.
11. Fermi energy of copper
12. Dielectric constant of non polar liquids (benzene)
13. Dipole moment of organic molecule (acetone)

Teaching hours per week: 04  
No. of Credits per week: 04

**Course Outcomes (COs):**

After successful completion of this course a student will be able to:

- Learn nature of black body spectrum, classical radiation laws and their limitations; Laws of photoelectric effect and Einstein photoelectric equation and Compton effect.
- Understand the atomic structure, matter waves, Quantum Physics and its applications.
- Acquire knowledge about nuclear structure and Molecular structure, quantum statistics, F-D and B-E distributions. Lasers action its characteristics.
- Acquire knowledge about nuclear fission/fusion nuclear reactor stellar energy and their applications.

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Blackbody Radiation:** Nature of Blackbody spectrum; classical radiation laws and their limitations; Planck's radiation law and quantum hypothesis. Simple examples/problems.

**The Photoelectric Effect:** Apparatus used to study the Photoelectric Effect; laws of Photoelectric Effect; Einstein Photoelectric Equation. Simple examples.

**X-Rays:** Nature and production of X rays; the Bragg law; Bragg X ray crystal spectrometer.

**The Compton Effect:** X ray Compton scattering from an electron; experimental set up for Compton scattering. Simple problems.

12 Hours

**Unit II**

**Atomic Structure:** Hydrogen spectrum; the Bohr model; experimental measurement of the Rydberg constant; Franck Hertz experiment.

**Matter Waves:** The de Broglie wavelength and its relation with the Bohr model; Davisson Germer experiment. Heisenberg Uncertainty principle: Momentum position and Energy time relations. Simple examples.

**Quantum Physics:** Idea of wave function and probability. One dimensional Schrödinger wave equation: Its application to the particle in a box and Hydrogen atom; energies and wave functions.

**Vector Model:** Space quantization: Orbital angular moment and magnetic moment; Spin angular

moment and magnetic moment; Stern Gerlach experiment. States of Hydrogen in terms of  $n$ ,  $l$ ,  $m_l$ . The normal Zeeman Effect; experimental set up for Zeeman effect. Simple problems.

12 Hours

### Unit III

**Statistical Physics:** Distinguishability and Indistinguishability; Maxwell Boltzmann distribution for gas molecules; vrms; Equipartition theorem. Quantum statistics: F D and B E distributions.

**Molecular Structure:** Bonding mechanisms: Ionic bonds; Covalent bonds; the Hydrogen bond; Van der Waals bonds. Molecular vibration and rotation spectra. Molecular orbitals: Hydrogen molecular ion and molecule; bonding in complex molecules.

**Solid State Physics:** Ionic solids; covalent solids; metallic solids; molecular crystals; amorphous solids. Classical models of electrical and heat conductivities in solids; Ohm's Law; Wiedemann Franz law; the quantum view point.

**Lasers:** Absorption, Spontaneous and Stimulated emissions; Population inversion; laser action; typical gas (He Ne/CO<sub>2</sub>) characteristics.

12 Hours

### Unit IV

Magnetism; Magnetic moment; Magnetization. Magnetic materials: Diamagnetic, paramagnetic and ferromagnetic materials. Superconductivity phenomenon.

**Nuclear Structure:** Nuclear properties: Charge, Mass, Size and Structure; Nuclear spin and magnetic moment; Nuclear Magnetic Resonance (NMR) phenomenon. Binding energy and nuclear forces. The liquid drop model. Radioactivity: Decay constant, Half life.

**Nuclear Fission / Fusion:** Fission – Basic process; a simple model; a typical nuclear reactor. Fusion: basic process; stellar energy.

**Relativity:** The Michelson Morely experiment. Postulates of Special theory of Relativity; Time dilation; Length contraction; Simultaneity of events;  $E = mc^2$ .

**Course Outcomes (COs):**

At the end of this course, the students will be able to

- Understand the basic principles of working of Digital voltmeter, electronic multimeter, digital multimeter, power meter, electronic LCR meter and cathode ray oscilloscope.
- Learn about UV/Visible absorption spectrometry and gain knowledge of about Single/double beam spectrometer. Infrared absorption spectroscopy, sample techniques etc.
- Understand the basic principles of Fluorescence and Phosphorescence, energy level diagram, Fluorimeter construction, working its applications.
- Learn about radioactivity and its applications as well as nuclear Physics applications

**Revised curriculum with changes/ additions/ modifications highlighted\***

**Unit I**

**Electronic instruments for measurement** – Single and dual power supply units. Digital voltmeter principles of electronic multimeter, digital multimeter, Q meter, Power meter, Electronic LCR meter, Frequency & time interval counters. Electronic instruments for signal generation & analysis – Function generators, Pulse generators, Frequency synthesizer, Principles & applications of cathode ray oscilloscope.

12 Hours

**Unit II**

**UV/Visible Absorption Spectrometry:** Concept of electronic energy levels, transitions, Beer's law and its limitations. Instrumentation: Components of Colorimeter, Single beam spectrometer, Double beam spectrophotometer; principle, construction and working, sampling technique; Applications.

**Infrared Absorption Spectrometry:** Concept of molecular vibrational energy levels, transitions. Instrumentation: Components of single beam and double beam spectrometers; principle, construction, working, sampling technique; Applications

12 Hours

**Unit III**

**Fluorescence Spectrometry:** Fluorescence and Phosphorescence phenomena(with energy level diagram). quantum yield, fluorescence quenching, rate parameters, radiative and natural lifetime. Fluorimeter: Basic components, principle, construction, working, sampling technique; Applications.

**Nuclear Magnetic Resonance Spectrometry:** Principle of resonance; the chemical shift. Components of NMR spectrometer: principle, construction, working, sampling technique; Applications.

12 Hours

#### Unit IV

##### **Radioactivity and its Applications**

**Radioactivity:** Unit of radioactivity, source strength, production and decay of radioactivity, alpha decay, beta decay, gamma decay, natural and artificial radioactivity, Geiger counter, NaI(Tl) detector.

**Applications of Nuclear Physics:** Trace element analysis, mass spectrometry with accelerators. Alpha decay application, diagnostic nuclear medicine, therapeutic nuclear medicine, food preservation, plant metabolism.

The specific outcomes of this course are as under:

- The course offers a good understanding on the basics of nanoscience.
- The course offers a good understanding basic quantum Mechanics.
- It also helps to synthesis and characterization of nano-materials using SEM, TEM, STEM, AFM and Diffraction techniques.
- Learn about properties of nano-materials like electrical mechanical, band structures etc.

### **Revised curriculum with changes/ additions/ modifications highlighted\***

#### **Unit I**

**Basics of nanoscience:** The nanoscale, historical background, quantum confinement, size dependent properties, types of nanomaterials, fullerenes, nanowires, nanotubes, thin film.

**Basic quantum mechanics:** Wave particle duality, Heisenberg uncertainty principle Schrödinger equation solution of one dimensional time independent equation, particle in a one dimensional box; density of states for zero , one , two and three dimensional box; particle in a coulomb potential. Tunneling of a particle through potential barrier

12 Hours

#### **Unit II**

**Synthesis of nanomaterials:** Physical methods mechanical ball milling, melt mixing; evaporation ion sputtering, laser ablation, laser pyrolysis, chemical vapour deposition, molecular beam epitaxy.

**Chemical methods:** colloidal synthesis and capping of nanoparticles. Types of nanoparticles metals, semiconductors, graphene, carbon nano tubes etc.

12 Hours

#### **Unit III**

**Characterization techniques:** microscopes optical, SEM, TEM, STM, AFM; diffraction techniques XRD, EXAFS neutron diffraction; spectroscopes UV visible IR absorption, FTIR, Photoluminescence.

12 Hours

#### **Unit IV**

**Properties of nanomaterials:** Mechanical; Electrical classification metals semi conductors, insulators, band structures; mobility, resistivity, Hall effect, magneto resistance; Optical optical absorption and transmission, photoluminescence, electro luminescence, thermoluminescence; Magnetic magnetism and types of magnetic materials dia , para , ferro , antiferro ; nano magnetism.

# **DEPARTMENT OF POLITICAL SCIENCE KARNATAK UNIVERSITY, DHARWAD**

## **Regulations Governing Post Graduate (M.A.) Course in Political Science (Scheme: Choice Based Credit System)**

### **I. Commencement:**

The Regulations shall come into force from the academic year 2020-2021.

### **II. Definitions:**

In this Regulation, unless otherwise mentioned,

- a) 'University' means Karnatak University, Dharwad.
- b) 'Board of Studies' means Board of Studies in Political Science (P.G) of the Karnatak University.
- c) 'Compulsory Paper' means the paper that is prescribed by the Department from time to time as compulsory.
- d) 'Specialization paper' means a Specialization paper prescribed by the Department from time to time.
- e) 'Open Elective' means, a paper offered by the Department of Political Science, for the students of other Departments in Karnatak University from time to time. However, the students of the Department of Political Science have freedom to choose any one of the Open Electives offered by other Departments to add to their credits required for the completion of their degree.
- f) 'Credit' means the unit by which the course work is measured. For this Regulation, one credit means one hour of teaching work per week. As regards the marks for the papers, 1 Credit is equal to 25 marks, 2 Credits are equal to 50 marks, 3 credits are equal to 75 marks, 4 credits are equal to 100 marks as used in the conventional system.
- g) 'Grade' is an index to indicate the performance of a student. These Grades are arrived at by converting marks scored in each paper by the candidate after completing his/her Internal Assessment and Semester End Examinations. These grades are awarded for each paper at the end of each semester (For details please refer Point No. XIII-Marks & Grade Points.)
- h) 'Grade Point Average' or GPA refers to an indicator of the performance of the student in a given semester. GPA is the weighted average of all Grades a student gets in a given semester. The GPA depends on the number of papers a student takes and the grades awarded to him/her for each of the paper so chosen.
- i) 'Cumulative Grade Point Average' or CGPA refers to the Cumulative Grade Point Averages weighted across all the semesters and is carried forward. The calculations of the GPA, CGPA is shown in these regulations (For details please refer Point No. XV-Grade Points Calculating Formula.)

### **III. Admission:**

The details of the admission rules are governed by the Notifications/Website and Circulars issued by the University from time to time. However, the applicant should have studied Political Science as one of the optionals at under Graduate level for admission to the Department of Political Science.

### **IV. Duration of the Programme:**

The Post Graduate Course (M.A.) in Political Science shall be for a period of two academic years, each academic year comprising of two semesters as notified by the University.

## **V. Teaching of the Course:**

Each paper shall be taught for 4 hours per week. However, it may vary from paper to paper depending on the activities of the Department, general holidays and the calendar of events prescribed by the University from time to time.

## **VI. Medium of Instruction**

The medium of instruction shall be English

## **VII. Scheme of Papers and Credits/Classes and Marks**

- a) There shall be three categories of papers viz., Compulsory papers, Specialization papers and Open Electives. Compulsory and Specialization papers are meant for the students of Department of Political Science. The Open Electives are the papers offered by the Department for the students of other Departments. However, the students of the Department of Political Science shall choose the Open Electives offered by other Departments to add to their Credits depending on their interest.
  - b) The Credits for each of the Compulsory paper and Specialization paper are FOUR. The Open Electives offered by the Department to the students of other Departments also carry FOUR credits each. However, the number of credits for the Open Electives offered by other departments may vary from one Department to the other Department.
  - c) **Streams of Specialization** are meant to train the students in certain area of Specialization. There are four Streams of Specialization. The students are expected to choose any one of the stream in the first semester itself and such students will continue to learn in the same stream all through the four semesters. Thus the student will gain Specialization in a specific stream which is a necessity in current scheme of higher education.
- c) **Scheme of Papers for the Post Graduate Course (M.A.) in Political Science**
