	_							

Course Outcomes (COs): Attheend of the course students will be able to:

CO1:Understand the fundamental concepts of algorithms and their complexity, including time and space complexity, worst-case and average-case analysis, and Big-O notation.

CO2:Design algorithms for solving various types of problems, such as Sorting, Searching, Graph

Traversal, Decrease-and-Conquer, Divide-and-Conquer and Greedy techniques.

CO3: Analyzeandcomparethetimeandspacecomplexityofalgorithms withotheralgorithmic techniques.

CO3: Evaluate the performance of Sorting, Searching, Graph traversal, Decrease-and-Conquer, Divide-and-

Conquer and Greedy Techniques using empirical testing and benchmarking, and identify their

limitations and potential improvements.

CO4:Apply various algorithm design to real-world problems and evaluate their effectiveness and efficiency in solving them.

Unit	Contents	56 hrs/sem
	Introduction: What is an Algorithm? Fundamentals of Algorithmic problem	
	solving, Fundamentals of the Analysis of Algorithm Efficiency, Analysis	
Unit I	Framework, Measuring the input size, Units for measuring Running time, Orders of	14
	Growth, Worst-case, Best-case and Average-case efficiencies.	
	Asymptotic Notations and Basic Efficiency classes, Informal Introduction, O	
	notation, Ω -notation, θ -notation, mathematical analysis of non-recursive algorithms,	
	mathematical analysis of recursive algorithms.	
	Brute Force & Exhaustive Search: Introduction to Brute Force approach, Selection	
Unit II	Sort and Bubble Sort, Sequential search, Exhaustive Search- Travelling Sales man	14
	Problem and Knapsack Problem, Depth First Search, Breadth First Search.	
	Decrease-and-Conquer: Introduction, Insertion Sort, Topological Sorting.	
Unit III	Divide-and-Conquer: Introduction, Merge Sort, Quick Sort, Binary Search, Binary	
	Tree traversals and related properties.	14
	Greedy Technique: Introduction, Prim's Algorithm, Kruskal's Algorithm, Dijkstra's	
Unit IV	Algorithm, Lower-Bound Arguments, Decision Trees, P Problems, NP Problems, NP-	
	Complete Problems, Challenges of Numerical Algorithms.	14

Course Title:Practical inDesign and Analysis of Algorithms **Course Code:**055BCA012

Type of	Theory		Instruction	Total No.of	Duration	Formative	Summative	Total
Course	/Practical	Credits	hour per week	Lectures/Hours	of Exam	Assessment	assessment	Marks
				/Semester		Marks	Marks	
DSCC-10	Practical	02	04	56hrs.	3hrs.	25	25	50

Course Outcomes (COs): Attheend of the course, students will be able to:

CO1: Able to calculate complexity of an algorithm.

CO2: Select appropriate design techniques to solve real world problems.

CO3: Apply the dynamic programming technique to solve the problems.

Program Nos	Programs	56.hrs/ sem
1	Write a program to sort a list of N elements using Selection Sort Technique.	
2	Write a program to perform Travelling Sales man Problem	
3	Write program to implement Dynamic Programming algorithm for the 0/1 Knapsack problem.	
4	Write program to implement the DFS and BFS algorithm for a graph.	
5	Write a program to find minimum and maximum value in an array using divide and conquer.	
6	Write a test program to implement Divide and Conquer Strategy. Eg: Quick sort algorithm for sorting list of integers in ascending order.	
7	Write a program to implement Merge sort algorithm for sorting a list of integers in ascending order.	
8	Write C program that accepts the vertices and edges for a graph and stores it as an adjacency matrix.	
9	ImplementfunctiontoprintIn-Degree,Out-Degreeandtodisplaythatadjacencymatrix	
10	Write a program to perform Knapsack Problem using GreedySolution	
11	Write program to implement backtracking algorithm for solving problems like Nqueens.	
12	Write a program to implement the backtracking algorithm for the sum of subsets problem	
13	Write program to implement greedy algorithm for job sequencing with deadlines.	
14	WriteprogramtoimplementDynamicProgrammingalgorithmfortheOptimalBinary Search Tree Problem.	
15	$Write a program that implements {\tt Prim's algorithm} to generate minimum costs panning {\tt Tree}.$	
16	Write a program that implements Kruskal's algorithm to generate minimum cost spanning tree.

BCA Semester-V

Skill Enhancement Course: SEC-3

Course Title:Cyber Security

Course Code:015CSC061

Type ofCours	Theory Practical	Credits	Instructionhou r/week	TotalNo.ofLectu res/Hours		FormativeA ssessmentM		
orcours	/Practical	Cleans	I/week	/Semester	Exam	arks	Marks	IKS
SEC-3	Practical	02	04	<mark>56hrs.</mark>		25	25	50

Course Outcomes (COs):Attheend of the course, students will be able to:

- CO1: Analyze and evaluate the cyber security needs of an organization.
- CO2: Conduct a cyber security risk assessment.
- CO3: Measure the performance and troubleshoot cyber security systems.
- CO4: Implement cyber security solutions.

Unit	Contents	<mark>42hrs/</mark>
		sem
Unit I	 Introduction – Cybersecurity: Definition, Types of Cyber Attacks, DefenceStrategies andTechniques, Guiding Principles, Cryptography; Mathematical Background for Cryptography:Modulo Arithmetic, The Greatest Common Divisor. Computer Security Concepts - Definition, The Challenges of Computer Security; SecurityAttacks: Passive Attacks, Active Attacks; Security Services: Authentication, Access Control,Data Confidentiality, Data Integrity, Nonrepudiation, Availability Service; SecurityMechanisms; Attack Surfaces and Attack Trees; A Model for Network Security. Symmetric Ciphers: Symmetric Cipher Model: Cryptography, Cryptanalysis and Brute-ForceAttack; Substitution Techniques: Caesar Cipher, Hill Cipher, One-Time Pad, Simple XOR,Transposition Techniques, Steganography 	14
Unit II	Asymmetric Ciphers: Principles Of Public-Key Cryptosystems, Public-Key Cryptosystems, Applications for Public-Key Cryptosystems, Requirements for Public-Key Cryptography, RSA. Cryptographic Hash Functions: Applications of Cryptographic Hash Functions: MessageAuthentication, Digital Signatures, Other Applications; Requirements and Security: SecurityRequirements for Cryptographic Hash Functions, Brute-Force Attacks, Cryptanalysis, ;SecureHash Algorithm (SHA).	14

Program No	Programs				
1	Write a Python program that defines a function and takes a password string as input and				
	returnsits SHA-256 hashed representation as a hexadecimal string.				
2	Write a Python program that defines a function to generate random passwords of a				
	specifiedlength. The function takes an optional parameter length, which is set to 8 by				
	default. If no lengthis specified by the user, the password will have 8 characters.				

 Write a Python program to check if a password meets the following criteria: a. At least 8 characters long, b. Contains at least one uppercase letter, one lowercase letter, one digit, and one special character (!, @, #, \$, %, or &), c. If the password meets the criteria, print a message that says "Valid Password." If it doesn'tmeet the criteria, print a message that says "Password does not meet requirements." 4 Write a Python program that reads a file containing a list of passwords, one per line. It checkseach password to see if it meets certain requirements (e.g. at least 8 characters, contains bothuppercase and lowercase letters, and at least one number and one special character). Passwordsthat satisfy the requirements should be printed by the program. 5 Write a Python program that creates a password strength based on criteria such as length, complexity, andrandomness. Afterwards, the program should provide suggestions for improving the password'sstrength. 6 Write a Python program that reads a file containing a list of usernames and passwords, one pairper line (separatized by a comma). It checks each password to see if it has been leaked in a databreach. You can use the "Have I Been Pwned" API (https://haveibeenpwned.com/API/v3) tocheck if a password has been leaked. 7 Write a Python program that simulates a brute-force attack on a password by trying out allpossible character combinations. 8 Python program for implementation symmetric encryption using Caesar cipher algorithm 	_		
 b. Contains at least one uppercase letter, one lowercase letter, one digit, and one special character (!, @, #, \$, %, or &), c. If the password meets the criteria, print a message that says "Valid Password." If it doesn'tmeet the criteria, print a message that says "Password does not meet requirements." 4 Write a Python program that reads a file containing a list of passwords, one per line. It checkseach password to see if it meets certain requirements (e.g. at least 8 characters, contains bothuppercase and lowercase letters, and at least one number and one special character). Passwordshat satisfy the requirements should be printed by the program. 5 Write a Python program that reates a password strength meter. The program should prompt theuser to enter a password and check its strength based on criteria such as length, complexity, andrandomness. Afterwards, the program should provide suggestions for improving the password'sstrength. 6 Write a Python program that reads a file containing a list of usernames and passwords, one pairper line (separatized by a comma). It checks each password to see if it has been leaked in a databreach. You can use the "Have I Been Pwned" API (https://haveibeenpwned.com/API/v3) tocheck if a password has been leaked. 7 Write a Python program that simulates a brute-force attack on a password by trying out allpossible character combinations. 8 Python program for implementation symmetric encryption using Caesar cipher algorithm 	3	Write a Python program to check if a password meets the following criteria:	
 character (!, @, #, \$, %, or &), c. If the password meets the criteria, print a message that says "Valid Password." BCA Semester–VI

Discipline Specific Elective (DSE-2B)

Course Title: Mobile Application Development

Course Code:056 BCA 022

Туре	Theory		Instruction	Total No.of	Duration	Formative	Summative	Total
ofCourse	/Practical	Credits	hour per week	Lectures/Hours	of Exam	Assessment	assessment	Marks
				/Semester		Marks	Marks	
DSE-2B	Theory	03	03	42 hrs.	2hrs.	40	60	100
	-							

Course Outcomes (COs): At the end of the course, students will be able to:

CO1:Create Servlets for server side programming. Create, test and debug Android application by Setting up Android development environment

CO2: Critique mobile applications on their design pro and cons,

CO3:Program mobile applications for the Android operating system and understand techniques for Designing and developing sophisticated mobile interfaces

CO4:Deploy applications to the Android market place for distribution.

Unit	Contents	42hrs/
		sem
Unit I	 Android OS design and Features: Android development framework, SDK features, Installing and running applications on Android Studio, Creating AVDs, Types of Android applications, Best practices in Android programming, Android tools, Building your First Android application. Android Application Design Essentials: Anatomy of an Android applications, Android terminologies, Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android Manifest File and its common settings, Using Intent Filter, Permissions. 	
Unit II	Android User Interface Design Essentials: User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation. Testing Android applications, Publishing Android application, Using Android preferences, Managing Application resources in a hierarchy, working with different types of resources.	14
Unit III	Using Common Android APIs: Using Android Data and Storage APIs, Managing data using Sqlite, Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using Android Web APIs, Deploying Android Application to the World.	14

Internship-1	Project	08				150	0	150
-	-							

Course Outcomes (COs): At the end of the course, students will be able to:

CO 1: The student will be able toanalyse, specify, design, implement and test application software.

CO 2:Allows a student to demonstrate their capabilities while working independently.

CO 3: Design a project through technical knowledge to meet customer/End user needs.

CO 4: Acquire a deeper understanding of software industry trends, best practices, and current developments.

CO 5: Apply process of Project Development to analyze and design the real-world problem.

CO 6: Document the project report of various phases for future scope of the project development.

Formative Assessment for Internship-1		
Assessment/Occasion/type	Marks	
Dissertation/Project Report evaluation :	60	
Presentation/Demo of the application developed :		
(navigation of the application, features incorporated, data validation, UI, reports, etc.)	60	
Viva-voce	30	
Total	150	
Formative Assessment as per guidelines.		

Execution of the Project:

- 1. The individual student is required to carry out the project under the guidance of course teacher.
- 2. Project work problem statement shall be identified by the students with the help of the course teachers and students shall submit the synopsis/project proposal of the same.
- 3. During project development students are expected to define a project problem, do requirements analysis, systems design, software development, apply testing strategies and do documentation with an overall emphasis on the development of a robust, efficient and reliable software systems.
- 4. The project development process has to be consistent and should follow standards identified by the guide monitoring the project work.
- 5. There is no restriction on use of hardware's and software's for carrying out the project work except that ready application packages are not allowed.
- 6. The students have to submit the project dissertation of the project work carried out in one hard copy along with soft copy written on compact disc.

Internship/Project:

A course requiring students to participate in a professional activity or work experience, or cooperative education activity with an entity external to the education institution, normally under the supervision of an expert of the given external entity. A key aspect of the internship is induction into actual work situations for 8 credits. Internships involve working with local industry, local governments or private organizations, business organizations, and similar entities to provide opportunities for students to actively engage in on-site experiential learning.

Note:

- 1. One credit internship is equal to 30 hrs.
- 2. Internship shall be Discipline Specific of 180-240 hours (8 credits) with duration 4-8weeks.
- 3. Internship may be full-time/part-time (full-time during last 4-8 weeks before closure of the semester or weekly 16 hrs in the academic session for 14-16 weeks). College shall decide the suitable method for programme wise but not subject wise.
- 4. Internship mentor/supervisor shall avail work allotment during 6th semester for a maximum of 180-240 hours.
- 5. The student should submit the final internship report (180-240 hours of Internship) to the mentor for completion of the internship.
- 6. Method of evaluation: Presentations/Report submission/Activity etc.

Whenever Internship is not feasible, the students can to choose the Project Work.

UG Programme: 2023-24

GENERAL PATTERN OF THEORY QUESTION COURSE FOR DSCC/ OEC

(60 marks for semester end Examination with 2 hrs duration)

Part-A

1. Question number 1-06 carries 2 marks each. Answer any 05 questions	: 10 marks

Part-B

2. Question number 07-11 carries 05Marks each. Answer any 04 questions : 20 marks

Part-C

3. Question number 12-15 carries 10 Marks each. Answer any 03 questions : 30 marks

(Minimum 1 question from each unit and 10 marks question may have subquestions for 7+3 or 6+4 or 5+5 if necessary)

Total: 60 Marks

Note: Proportionate weightage shall be given to each unit based on number of hours prescribed
